Saving Belief A Critique Of Physicalism:

Saving Belief Lynne Rudder Baker, 2017-03-14 This stimulating book critically examines a wide range of physicalistic conceptions of mind in the works of Jerry A Fodor Stephen P Stich Paul M Churchland Daniel C Dennett and others Part I argues that intentional concepts cannot be reduced to nonintentional and nonsemantic concepts Part II argues that intentional concepts are nevertheless indispensable to our cognitive enterprises and thus need no foundation in physicalism As a sustained challenge to the prevailing interpretation of cognitive science this timely book fills a large gap in the philosophical literature It is sure to spark controversy yet its clarity makes it attractive as a text in upper level undergraduate and graduate courses in philosophy of mind and cognitive science **Saving Belief** should be read by philosophers psychologists and others interested in the philosophy of language philosophy of mind and cognitive science Originally published in 1988 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Saving Belief Lynne R. Baker, 1987-01-01 This book is a comprehensive attack on several of the views that have been most influential in the philosophy of psychology during the last two decades Professor Baker argues that mentalistic notions should not be eliminated and need not be explained in terms of other notions in cognitive science The book is interesting and shows an honest concern for clear argumentation It deserves a wide readership Tyler Burge University of California at Los Angeles This book is a provocative and relentlessly argued treatment of a deep and important topic the fate of intentionality Baker's arguments oblige those who wish to defend the current conception of cognitive science to rethink the discipline She has put the ball squarely in the physicalists court Despite the technical character of the topic the book is wonderfully readable John Heil Visiting Fellow University of California Berkeley This stimulating book critically examines a wide range of physicalistic conceptions of mind in the works of Jerry A Fodor Stephen P Stich Paul M Churchland Daniel C Dennett and others Part I argues that intentional concepts cannot be reduced to nonintentional and nonsemantic concepts Part II argues that intentional concepts are nevertheless indispensable to our cognitive enterprises and thus need no foundation in physicalism As a sustained challenge to the prevailing interpretation of cognitive science this timely book fills a large gap in the philosophical literature It is sure to spark controversy yet its clarity makes it attractive as a text in upper level undergraduate and graduate courses in philosophy of mind and cognitive science **Saving Belief** should be read by philosophers psychologists and others interested in the philosophy of language philosophy of mind and cognitive science

The Evolutionary Argument against Naturalism Jim Slagle, 2021-06-17 Contemporary discussions in metaphysics epistemology and philosophy of mind are dominated by the presupposition of naturalism Arguing

against this established convention Jim Slagle offers a thorough defence of Alvin Plantinga's Evolutionary Argument against Naturalism EAAN and in doing so reveals how it shows that evolution and naturalism are incompatible Charting the development of Plantinga's argument Slagle asserts that the probability of our cognitive faculties reliably producing true beliefs is low if ontological naturalism is true and therefore all other beliefs produced by these faculties including naturalism itself are self defeating He critiques other well known epistemological approaches including those of Descartes and Quine and deftly counters the many objections against the EAAN to conclude that metaphysical naturalism should be rejected on the grounds of self defeat By situating Plantinga's argument within a wider context and showing that science and evolution cannot entail naturalism Slagle renders this most common metaphysical view irrational As such the book advocates an important reconsideration of contemporary thought at the intersection of philosophy science and religion

The Concept of Unbelief Albert Mitchell Ph.D, 2013-08-08 The Concept of Unbelief is examined according to the ethical teachings of Immanuel Kant Kants notion of the idea of God as a moral postulate is used as a foil to the agnostic position to further clarify Kants concept of unbelief This stance by Kant is contrasted with the concept of unbelief in Johann Fichtes Attempt at a Critique of All Revelation

Rerepresentation S. Silvers, 2012-12-06 This collection of papers on issues in the theory of mental representation expresses a diversity of recent reflections on the idea that C D Broad so aptly characterized in the title of his book Mind and the World Order An important impetus in the project of organizing this work were the discussions I had with Keith Lehrer while I was a Visiting Scholar in the department of Philosophy at the University of Arizona His encouragement and friendship were of great value to me and I wish to express my thanks to him here A word of thanks too for Mike Harnish who casually suggested the title Rerepresentation I wish to express my thanks to Hans Schuurmans of the Computer Center at Tilburg University for his patient and cheerful assistance in preparing the manuscript Professor J Verster of the University of Groningen kindly provided the plates for the Ames Room figures Thieu Kuys helped not only with the texts but also relieved me of chores so that I could devote more time to meeting deadlines Barry Mildner had a major role in the text preparation using his skills and initiative in solving what seemed like endless technical problems My deepest thanks are reserved for Anti Sax whose contribution to the project amount to a co editorship of this volume She participated in every phase of its development with valuable suggestions prepared the indexes and worked tirelessly to its completion

The Rights of Strangers Georg Cavallar, 2017-07-05 This study investigates the thinking of European authors from Vitoria to Kant about political justice the global community and the rights of strangers as one special form of interaction among individuals of divergent societies political communities and cultures Taking an interdisciplinary approach it covers historical material from a predominantly philosophical perspective interpreting authors who have tackled problems related to the rights of strangers under the heading of international hospitality Their analyses of the civitas maxima or the societas humani generis covered the nature of the global commonwealth Their doctrines of natural law ius naturae were supposed to provide what we

nowadays call theories of political justice The focus of the work is on international hospitality as part of the law of nations on its scope and justification It follows the political ideas of Francisco de Vitoria and the Second Scholastic in the 16th century of Alberico Gentili Hugo Grotius Samuel Pufendorf Christian Wolff Emer de Vattel Johann Jacob Moser and Immanuel Kant It draws attention to the international dimension of political thought in Thomas Hobbes John Locke Jean Jacques Rousseau David Hume Adam Smith and others This is predominantly a study in intellectual history which contextualizes ideas but also emphasizes their systematic relevance

Common Sense Metaphysics Luis Oliveira, Kevin Corcoran, 2020-12-28 This book celebrates the research career of Lynne Rudder Baker by presenting sixteen new and critical essays from admiring students colleagues interlocutors and friends Baker was a trenchant critic of physicalist conceptions of the universe She was a staunch defender of a kind of practical realism what she sometimes called a metaphysics of everyday life It was this general common sense philosophical outlook that underwrote her famous constitution view of reality Whereas most of her contemporaries were in general given to metaphysical reductionism and eliminativism Baker was unapologetic and philosophically deft in her defense of ontological pluralism The essays in this book engage with all aspects of her unique and influential work practical realism about the mind the constitution view of human persons the first person perspective and God Christianity and naturalism Common Sense Metaphysics will be of interest to scholars of Baker's work as well as scholars and advanced students engaged in research on various topics in metaphysics philosophy of mind philosophy of language and philosophy of religion

The Normative Web Terence Cuneo, 2007-09-06 Many philosophers hold antirealist views about morality according to which moral facts or truths do not exist Does this imply that other types of normative facts such as epistemic facts do not exist The Normative Web develops a positive answer to this question By means of an analogy between moral and epistemic facts Terence Cuneo presents a compelling defence of robust realism in ethics In so doing he engages with a range of antirealist positions in epistemology such as error theories expressivist views and reductionist views of epistemic reasons

Belief and Metaphysics Conor Cunningham, Peter M. Candler, 2007 This is an exciting distinguished and indeed brave volume on the relation between belief and metaphysics The volume of twenty essays is exciting in that the points of entry to the question of relation and styles of discourse are so varied while less established voices are allowed to sound with the more established it is distinguished not simply because of its many famous names but because it unites in one volume analytic and continental philosophical approaches to the issue to the common purpose of retrieving yet also reconceiving metaphysics and it is brave in that not only does it refuse to indulge the contemporary prejudice against metaphysics and the necessity for belief to forgo the comfort of relation but brings to the surface postmodernity's own penchant for axiomatics and its containment of the religious by uncoupling it from metaphysical commitments Cyril O'Regan Catherine F. Huisking Professor of Theology Department of Theology Notre Dame Without metaphysics theology is boring some one says in this book without theology metaphysics goes nowhere some one else says Of

course it depends what you mean by metaphysics and for that matter theology There is more than enough here to interest entertain and even enrage philosophers and especially theologians A MARVELLOUS COLLECTION Fergus Kerr O P Honorary Fellow in the School of Divinity at the University of Edinburgh This is a truly splendid collection of essays admirable not only for its range but for its depth It would be hard to assemble a more distinguished cast of contributors and harder still to find another volume that offers comparably rich and varied reflections on the profound relation between faith and metaphysical reasoning David Bentley Ha Connectionism and the Philosophy of Mind T. Horgan,J.

Tienson,2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and to computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time One of the most if not the most exciting developments within cognitive science has been the emergence of connectionism as an alternative to the computational conception of the mind that tends to dominate the discipline In this volume John Tienson and Terence Horgan have brought together a fine collection of stimulating studies on connectionism and its significance As the Introduction explains the most pressing questions concern whether or not connectionism can provide a new conception of the nature of mentality By focusing on the similarities and differences between connectionism and other approaches to cognitive science the chapters of this book supply valuable resources that advance our understanding of these difficult issues J H F Philosophy Of Mind Paul Gilbert,Kathleen

Lennon,2005-08-04 A welcome introduction to one of the most intellectually demanding areas of the undergraduate philosophy curriculum The authors provide a clear framework within which students can fit contemporary developments in the Anglo American tradition which provide the core themes of philosophy of mind and which connect to their other work in epistemology and philosophy of language *Folk Psychology Re-Assessed* D. Hutto,Matthew M. Ratcliffe,2007-09-06 1 1

FOLK PSYCHOLOGY THEORY OF MIND AND SIMULATION The tasks we face in our day to day social lives are quite heterogeneous but many of them make a common demand upon us They require us to understand and interact with other people and in most social encounters we exhibit a special sensitivity to our fellow human beings that is quite different from the way we respond to inanimate objects and most other species of organism Social life is dependent to a considerable degree on our ability to understand what is distinctive about human behaviour and to successfully apply that understanding in all manner of situations What is central to our ability to interpret one another A great deal of work in philosophy of mind cognitive science anthropology developmental psychology and a host of other disciplines assumes that at root interpersonal

interpretation is accomplished through the employment of a commonsense or folk psychology meaning an everyday rather than scientific appreciation of mindedness Although there is considerable debate over which cognitive processes support our folk psychological abilities and how those abilities develop during childhood there is a remarkable degree of consensus concerning what folk psychology consists of Almost all discussions of the topic begin by stating or presupposing that it is the ability to attribute intentional states principally beliefs and desires to other people and perhaps also to oneself in order to predict and explain behaviour

Mind as Metaphor Adam Toon, 2023 Mind as Metaphor shows that mental fictionalism can make sense of our concept of mind avoiding the difficulties faced by alternative approaches such as behaviourism or instrumentalism Adam Toon sheds light on a range of issues from the mind's capacity to represent the world to the way in which new practices expand the limits of inquiry

Explaining Attitudes Lynne Rudder Baker, 1995-01-27 Explaining Attitudes develops an account of propositional attitudes practical realism

Harmless Naturalism Robert F. Almeder, 1998 Robert Almeder argues that scientism is rationally indefensible but that there is a rationally defensible form of naturalism harmless naturalism which does not reduce philosophical explanations to scientific ones

Theories of Consciousness William Seager, 2002-01-31 The most remarkable fact about the universe is that certain parts of it are conscious Somehow nature has managed to pull the rabbit of experience out of a hat made of mere matter Making its own contribution to the current lively debate about the nature of consciousness Theories of Consciousness introduces variety of approaches to consciousness and explores to what extent scientific understanding of consciousness is possible Including discussion of key figures such as Descartes Fodor Dennett and Chalmers the book covers identity theories representational theories intentionality externalism and the new information based theories

Truth Without Truths David Liggins, 2024-09-14 In the context of debates about truth nihilism is the view that nothing is true This is a very striking and at first implausible thesis which is perhaps why it is seldom discussed Truth without Truths applies nihilism to the philosophical debates on truth and paradox and explores how a nihilist approach to truth is a serious contender David Liggins

demonstrates that a strong case for nihilism about truth is available The main grounds for taking nihilism on truth seriously are the solutions it provides to a wide range of paradoxes involving truth and its epistemological superiority to theories that posit truths The discussion considers a wider range of paradoxes than usual including the truth teller paradox and other paradoxes of underdetermination Liggins shows how the debate over truth and paradox can be advanced by drawing on metaphysical debates about realism and anti realism Truth without Truths is also a challenge to deflationism Deflationists provide an austere metaphysically lightweight account of truth But there is one posit that all contemporary deflationists make they posit truths By showing that we can well do without truths Liggins argues that deflationism is actually too lavish a position Liggins's preferred form of alethic nihilism includes a Ramseyan analysis of the concept of truth which uses quantification into sentence position conceived of as non objectual and non substitutional This book is part of a wider

movement exploring the implications of admitting forms of non objectual non substitutional quantification sometimes called higher order metaphysics

The Mind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13 What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science In this book Erneling and Johnson identify two problems with defining this discipline First some theorists identify the common subject matter as the mind but scientists and philosophers have not been able to agree on any single satisfactory answer to the question of what the mind is Second those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric psychology linguistics biology and so on are of roughly equal value in their ability to shed light on the nature of mind This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions However since the cultural account of mind has long been ignored in favor of the neurophysiological account Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind

Passions and Projections Robert N. Johnson, Michael Smith, 2015-01-08 This volume presents fourteen original essays which explore the philosophy of Simon Blackburn one of the UK's most influential contemporary philosophers Blackburn is best known to the general public for his attempts to make philosophy accessible to those with little or no formal training but in professional circles his reputation is based on a lifetime pursuit of his distinctive version of a projectivist and anti realist research program As he sees things we must always try first to understand and explain what we are doing when we think and talk as we do This research program reaches into nearly all of the main areas of philosophy metaphysics epistemology philosophy of mind moral philosophy and moral psychology The books and articles he has written provide us with perhaps the most comprehensive statement and defense of projectivism and anti realism since Hume The essays collected here document the range and influence of Blackburn's work They reveal among other things the resourcefulness of his distinctive brand of philosophical pragmatism

The Big Argument John Ashton, Michael Westacott, 2006-01-01 The argument that reads like a conversation about life Is there archaeological evidence for the New Testament Did the universe hatch from a cosmic egg What does the fossil record imply about the existence of God Is design inferred by the existence of information Since the Enlightenment spirited debates about the existence of God have captured the public's imagination Scholars philosophers and scientists have grappled with the evidence that God exists or doesn't Today some of the world's best minds in a variety of disciplines grapple with whether there is any real purpose to our lives Yet not only do many scientists believe in the God who created us with purpose they also understand that what we do in the here and now has consequences in the next life John Ashton has compiled a group of essayists who specialize in fields such as archaeology astronomy biblical scholarship and more The result is a fascinating exploration of an age old question sure to intrigue believers and skeptics alike
