conference chair Professor Debenham for all his efforts in organising the Symposium and the members of our programme committee for reviewing an unexpectedly large number of papers to a very tight deadline This is the latest in a series of conferences organised by IFIP Technical Committee 12 dedicated to the techniques of Artificial Intelligence and their real world applications The wide range and importance of these applications is clearly indicated by the papers in this volume Further information about TCI 2 can be found on our website <http://www.ifiptcl2.org> Expert Systems in the Organisation

Stuart E. Savory, 1988 The aim of this book is to explain to the reader who until now may have possess little or no knowledge about expert systems the possible applications and uses thereof in an introductory manner After reading this book the reader should understand what expert systems are know where they can be introduced and be able to judge correctly where they can be put to economic use in his company The reader can then progress to more advanced texts subject to his or her own judgment and particular interests because we have ensured that the authors of each chapter included what they deemed from their own individual viewpoint to be a list of relevant literature references **Concurrent Programming in OCCAM**

2 John Wexler, 1989 Software Programming Languages **COMPSTAT** David Edwards, Niels E. Raun, 2012-12-06 The papers assembled in this volume were presented at COMPSTAT 1988 the 8th biannual Symposium in Computational Statistics held under the auspices of the International Association for Statistical Computing The current impact of computers on the theory and practice of statistics can be traced at many levels on one level the ubiquitous personal computer has made methods for explorative data analysis and display rarely even described in conventional statistics textbooks widely available At another level advances in computing power permit the development and application of statistical methods in ways that previously have been infeasible Some of these methods for example Bayesian methods are deeply rooted in the philosophical basis of statistics while others for example dynamic graphics present the classical statistical framework with quite novel perspectives The contents of this volume provide a cross section of current concerns and interests in computational statistics A dominating topic is the application of artificial intelligence to statistics and vice versa where systems deserving the label expert systems are just beginning to emerge from the haze of good intentions with which they hitherto have been clouded Other topics that are well represented include nonparametric estimation graphical techniques algorithmic developments in all areas projection pursuit and other computationally intensive methods COMPSTAT symposia have been held biannually since 1974 This tradition has made COMPSTAT a major forum for advances in computational statistics with contributions from many countries in the world Two new features have been introduced at COMPSTAT 88 *Expert Systems and Applied Artificial Intelligence* Efraim Turban, Louis E. Frenzel, 1992 This book is devoted mainly to applied expert systems It does cover four additional applied AI Topics natural language processing computer vision speech understanding and intelligent robotics Preface **Expert Systems in Production Engineering** Georg Menges, Norbert Hövelmanns, Erwin Baur, 2013-03-12 The present volume contains edited versions of the communications presented at an International Workshop

on Expert Systems in Production Engineering held in Spa Belgium in 1986 Introductory papers on Artificial Intelligence and Expert Systems are complemented by case studies of Expert Systems in practice primarily in the area of Mechanical Engineering and discussions of the possibilities and the limitations of Expert Systems Australian Computer Journal ,1990
