Lectures on Differential Topology Riccardo Benedetti, 2021-10-27 This book gives a comprehensive introduction to the theory of smooth manifolds maps and fundamental associated structures with an emphasis on bare hands approaches combining differential topological cut and paste procedures and applications of transversality In particular the smooth cobordism cup product is defined from scratch and used as the main tool in a variety of settings After establishing the fundamentals the book proceeds to a broad range of more advanced topics in differential topology including degree theory the Poincaré Hopf index theorem bordism characteristic numbers and the Pontryagin Thom construction Cobordism intersection forms are used to classify compact surfaces their quadratic enhancements are developed and applied to studying the homotopy groups of spheres the bordism group of immersed surfaces in a 3 manifold and congruences mod 16 for the signature of intersection forms of 4 manifolds Other topics include the high dimensional h h cobordism theorem stressing the role of the Whitney trick a determination of the singleton bordism modules in low dimensions and proofs of parallelizability of orientable 3 manifolds and the Lickorish Wallace theorem Nash manifolds and Nash's questions on the existence of real algebraic models are also discussed This book will be useful as a textbook for beginning masters and doctoral students interested in differential topology who have finished a standard undergraduate mathematics curriculum It emphasizes an active learning approach and exercises are included within the text as part of the flow of ideas Experienced readers may use this book as a source of alternative constructive approaches to results commonly presented in more advanced contexts with specialized techniques

Real Algebraic Geometry and Ordered Structures Charles N. Delzell, James J. Madden, 2000 This volume contains 16 carefully refereed articles by participants in the Special Semester and the AMS Special Session on Real Algebraic Geometry and Ordered Structures held at Louisiana State University and Southern University Baton Rouge The 23 contributors to this volume were among the 75 mathematicians from 15 countries who participated in the special semester Topics include the topology of real algebraic curves Hilbert's 16th problem moduli of real algebraic curves effective sums of squares of real forms Hilbert's 17th problem efficient real quantifier elimination subanalytic sets and stratifications semialgebraic singularity theory radial vector fields exponential functions and valuations on nonarchimedean ordered fields valued field extensions partially ordered and lattice ordered rings rings of continuous functions spectra of rings and abstract spaces of higher level orderings and real places This volume provides a good overview of the state of the art in this area in the 1990s It includes both expository and original research papers by top workers in this thriving field The authors and editors strived to make the volume useful to a wide audience including students and researchers interested in real algebraic geometry and ordered structures two subjects that are obviously related but seldom brought together

[A Glimpse into Geometric Representation Theory](#) Mahir Bilen Can, Jörg Feldvoss, 2024-08-07 This volume contains the proceedings of the AMS Special Session on Combinatorial and Geometric Representation Theory held virtually on November 20-21 2021 The

articles offer an engaging look into recent advancements in geometric representation theory. Despite diverse subject matters, a common thread uniting the articles of this volume is the power of geometric methods. The authors explore the following five contemporary topics in geometric representation theory: equivariant motivic Chern classes, equivariant Hirzebruch classes, and equivariant Chern-Schwartz-MacPherson classes of Schubert cells; locally semialgebraic spaces; Nash manifolds and their superspace counterparts; support varieties of Lie superalgebras; wreath Macdonald polynomials and equivariant extensions and solutions of the Deligne-Simpson problem. Each article provides a well-structured overview of its topic, highlighting the emerging theories developed by the authors and their colleagues.

The Abel Prize 2013-2017 Helge Holden, Ragni Piene, 2019-02-23. The book presents the winners of the Abel Prize in mathematics for the period 2013-17: Pierre Deligne (2013), Yakov G. Sinai (2014), John Nash Jr. and Louis Nirenberg (2015), Sir Andrew Wiles (2016), and Yves Meyer (2017). The profiles feature autobiographical information as well as a scholarly description of each mathematician's work. In addition, each profile contains a Curriculum Vitae, a complete bibliography, and the full citation from the prize committee. The book also includes photos for the period 2003-2017 showing many of the additional activities connected with the Abel Prize. As an added feature, video interviews with the Laureates as well as videos from the prize ceremony are provided at an accompanying website: <http://extras.springer.com>. This book follows on *The Abel Prize 2003-2007: The First Five Years* (Springer, 2010) and *The Abel Prize 2008-2012* (Springer, 2014), which profile the work of the previous Abel Prize winners.
