The Pelagic Dictionary of Natural History of the British Isles Dr. Peter Jarvis, 2020-01-06 A unique collection of concise but detailed information on 10 000 animals plants fungi and algae of the British Isles Every species with an English common name is included The compendium is in two parts The first smaller part looks at various terms that people interested in natural history may come across The second provides information on individual species or species groups with entries on those with English common names as well as selected families orders classes etc In the case of marine organisms entries are given for intertidal and subtidal invertebrate species and generally speaking for fish species that might be observed inshore Indication is often given on distribution as well as whether a species is common scarce or something in between For some species a note is made of population size and trends Comments are made where appropriate on etymology both of the English name and the binomial No other natural history dictionary or cognate publication relating to the British Isles is as comprehensive in taxonomic cover

A Natural History of the British Lepidoptera James William Tutt, 1899
The Natural History of Moths Mark Young, 2010-06-30 The Natural History of Moths covers all aspects of moth biology and ecology Moths are often as beautiful as butterflies and with more than 2 000 species on the British list they are more numerous more diverse and occupy a far wider variety of habitats and lifestyles Yet for most naturalists they remain a little known and neglected group Not since E B Ford's 1955 New Naturalist volume has the biology of moths been treated in a popular book Here Mark Young sets out to redress this imbalance and to show the great variety and interest of these sometimes striking sometimes subtle insects He draws together the results of amateur study and the latest scientific research to paint a broad picture of all aspects of moth biology brought to life with many fascinating examples from the moth faunas of Britain and abroad The breeding feeding distribution and life history ecology of moths are described in addition to more specialised aspects of their biology such as pheromone attraction of mates interactions with host plants and the anti predator responses that many moths use to foil bats and birds While butterfly conservation problems have often provided headline news in the press the difficulties facing moths have received much less attention However threats arising from the loss and degradation of natural habitats have had no less effect on moths and have endangered many more species The status and fortunes of many moths are still unknown but a growing number of success stories such as that of the Black veined Moth point the way to better practice for the future and to the preservation of this enormous wealth of beauty diversity and natural history interest
