The Natural Radiation Environment Jacob Kastner, 1968 **The Natural Radiation Environment** John Allan Stewart Adams, Wayne M. Lowder, 1964 The interplay between man and each environmental factor and that between the various factors themselves are fascination in their great intricacy and delicate balance *Natural Radiation Exposure in the United States* Donald T. Oakley, 1972 **The Natural Radiation Environment VII** J.P. McLaughlin, E.S. Simopoulos, F. Steinhäusler, 2005-03-30 The Natural Radiation Environment Symposium NRE VII the Seventh in the NRE series which commenced forty years ago in 1963 at Rice University Texas was held in Rhodes Greece in May 2002 During the intervening four decades the research work presented at these NRE Symposia has contributed to a deeper understanding of natural radiation and in particular of its contribution to human radiation exposures It is clear from the quality and diversity of the 143 papers in this volume of Radioactivity in the Environment series that the study of the natural radiation environment is an active and continually expanding field of research The papers in this volume fall into a number of main and topical research areas namely the measurement and behaviour of natural radionuclides in the environment cosmic radiation measurement and dosimetry the external penetrating radiation field at ground level TENR Technologically Enhanced Natural Radiation and NORM Naturally Occurring Radioactive Materials studies assessment of the health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources

Harmful Natural Chemicals And Radiation In The Environment: Stories, History And What You Need To Know Raymond Poon, 2012-12-19 This unique volume provides in layman's terms without sacrificing scientific facts the health hazards and potential dangers of naturally occurring substances that are around us everyday The comprehensive coverage includes compounds e.g. arsenic lead gases e.g. hydrogen sulphide ozone and all forms of natural radiations e.g. heat radon Readers will find this book both informative and entertaining because facts and important data are introduced and interpreted in the form of history stories and scientific summaries Each chapter concludes with a practical guide that readers will find useful Harmful Naturally Occurring Substance and Radiation which is fully referenced with up to date articles may be used as a textbook for undergraduates and as an introductory textbook for post graduates in biochemistry environmental science toxicology medical science and health care People interested in personal and public health and earth issues will find this

book a thought provoking and revealing read The book may also be a source of information for policy makers public health officials city planners and environmental engineers

Environmental Radioactivity from Natural, Industrial and Military Sources Merrill Eisenbud, Thomas F. Gesell, 1997-03-26 Environmental Radioactivity from Natural Industrial and Military Sources is the comprehensive source of information on radiation in the environment and human exposure to radioactivity This Fourth Edition is a complete revision and extension of the classic work reflecting major new developments and concerns as the Cold War ended nuclear weapons began to be dismantled and cleanup of the nuclear weapons facilities assumed center stage Contamination from accidents involving weapons reactors and radionuclide sources are discussed in an updated chapter including the latest information about the effects of the Chernobyl accident Important revisions are also made to the chapters on natural radioactivity nuclear fuels and power reactors radioactive waste management and various other sources of exposure Several chapters provide primers for readers who may not be familiar with the fundamentals of radiation biology protection standards and pathways for the environmental transport of radionuclides An Appendix lists the properties of the more important radionuclides found in the environment The book concludes with a commentary on contemporary social aspects of radiation exposure and risks that offers an alternative view to current often excessive concerns over radiation nuclear technology and waste Describes every important source of environmental radioactivity Reviews the vexing problems of radioactive waste management and clean up of contaminated sites Contains measured or projected radiation dose estimates for the major sources Features 126 figures 80 tables and more than 1200 references Discusses current problems in historical context The two authors bring more than 75 years of combined experience with environmental radioactivity Provides an understanding of the sources of environmental radioactivity and human exposure from the mining of ores to final disposal of wastes Thoroughly reviews important contamination accidents

TENR - Technologically Enhanced Natural Radiation Anselmo Salles Paschoa, F. Steinhausler, 2009-12-31 This book on TENR discusses the basic Physics and Chemistry principles of natural radiation The current knowledge of the biological effects of natural radiation is summarized A wide variety of topics from cosmic radiation to atmospheric terrestrial and aquatic radiation is addressed including radon thoron and depleted uranium Issues like terrorism and geochronology using natural radiation are also examined Comprehensive global TENR data assembly Critical assessment of the significant radiological impact of TENR on man and the environment as compared to radiological impact from man made sources in nuclear technology and nuclear medicine Illustration of the importance of TENR for the future conceptual development of radiation protection

Naturally occurring radionuclides are found throughout the earth's crust and they form part of the natural background of radiation to which all humans are exposed. Many human activities such as mining and milling of ores, extraction of petroleum products, use of groundwater for domestic purposes and living in houses alter the natural background of radiation either by moving naturally occurring radionuclides from inaccessible locations to locations where humans are present or by concentrating the radionuclides in the exposure environment. Such alterations of the natural environment can increase sometimes substantially radiation exposures of the public. Exposures of the public to naturally occurring radioactive materials NORM that result from human activities that alter the natural environment can be subjected to regulatory control at least to some degree. The regulation of public exposures to such technologically enhanced naturally occurring radioactive materials TENORM by the US Environmental Protection Agency EPA and other regulatory and advisory organizations is the subject of this study by the National Research Council's Committee on the Evaluation of EPA Guidelines for Exposures to Naturally Occurring Radioactive Materials. Man-Made and Natural Radioactivity in Environmental Pollution and Radiochronology Richard Tykva,Dieter Berg,2013-03-14

Radioactivity can be detected at different levels in almost all objects all over the world including the human body. This omnipresence of naturally occurring radioactivity is of immediate and crucial concern to people who work in the nuclear industry, to state and local authorities responsible for environmental protection and control of nuclear weapons and to researchers as physics e.g. interaction in scientific and technological disciplines such as radiation with matter, chemistry e.g. management of radioactive wastes, biology e.g. radiation bioeffects and risks, ecology e.g. remediation of environmental pollution, electronics e.g. measurement instruments etc. Unlike other environmental pollutants such as heavy metals and pesticides, some other scientific disciplines for example archaeology, hydrology and geology profit by the environmental radionuclides using methods based on their application in radiochronology. The basic goal of this book is to examine the complex state of radioactivity in the environment including its sources and applications. In principle, there are two sources of environmental radioactivity, namely man-made and natural. The authors of this book set out to analyze mainly empirical aspects of the activities of both groups. On one hand, a detailed analysis of the sources releasing radionuclides into the environment by human activities should, while describing environmental pollution and its dangers, contribute to its decrease in the future.
