Gaukroger,2016-01-21 Stephen Gaukroger presents an original account of the development of empirical science and the understanding of human behaviour from the mid eighteenth century Since the seventeenth century science in the west has undergone a unique form of cumulative development in which it has been consolidated through integration into and shaping of a culture But in the eighteenth century science was cut loose from the legitimating culture in which it had had a public rationale as a fruitful and worthwhile form of enquiry What kept it afloat between the middle of the eighteenth and the middle of the nineteenth centuries when its legitimacy began to hinge on an intimate link with technology The answer lies in large part in an abrupt but fundamental shift in how the tasks of scientific enquiry were conceived from the natural realm to the human realm At the core of this development lies the naturalization of the human that is attempts to understand human behaviour and motivations no longer in theological and metaphysical terms but in empirical terms One of the most striking feature of this development is the variety of forms it took and the book explores anthropological medicine philosophical anthropology the natural history of man and social arithmetic Each of these disciplines re formulated basic questions so that empirical investigation could be drawn upon in answering them but the empirical dimension was conceived very differently in each case with the result that the naturalization of the human took the form of competing and in some respects mutually exclusive projects

Head Games Nikitah Okembe-RA Imani, 2010-12-18 Head Games is focused on the way in which ethnocentrism and cultural bias can impact public health and in this case psychotherapeutic process It examines a family therapy program being run by a major public university tied to the criminal justice system and the educational establishment aiming to reform perceived dysfunctionality in homes of the patients subjects What follows is a tragic comedy of errors in which theory and practice normed in one sociocultural context is applied or more appropriately misapplied This book questions whether we have come as far as we think in the US in terms of calibrating our mental health systems for multicultural sensitivity and perhaps suggests there are limits to how much we can engage in cross cultural therapy The book uses an Africa centered theoretical framework to tease out these systemic incongruities and will hopefully provide guidance for counselors researchers and those more generally interested in programmatic evaluation research across cultural lines The title Head Games is an apt metaphor for the manipulation of the program by all of its participants for the purpose of reifying or resisting its inherent definitions of abnormality
