Lawrence Parsegian, 1968 *Ideas for a Hermeneutic Phenomenology of the Natural Sciences* J.J. Kockelmans, 2012-12-06 This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science The ontological issues are discussed from a hermeneutic phenomenological point of view In addition the book contains critical discussions of basic themes raised by Carnap Hempel Stegmüller Kuhn Lakatos Hahn Popper van Fraassen Heelan and Kisiel One of the basic theses developed in the book is that logical epistemological and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences **Natural Science** , 1898 *Religion and the Natural Sciences* James E. Jalobeanu,2015 Francis Bacon introduced his contemporaries to a new way of investigating nature He called it natural and experimental history Despite its rather traditional name Bacon s natural and experimental history was a new discipline it comprised new ideas new practices and new models of collaborative research This new discipline was in many ways a surprisingly successful project It provided early modern naturalists with tools methods and models for both investigating nature and writing about their subject It also offered a set of norms and values for guiding research And yet this new discipline was not a science of nature it was more like an art This book aims to trace the emergence evolution and reception of Francis Bacon s art of experimental natural history Reassembling the Strange Thomas Anderson,2018-10-15 This book examines how Westerners understood and processed Madagascar and its environment during the nineteenth century Madagascar s unique ecosystem crafted its reputation as a strange place full of unusual species Westerners however often minimized Madagascar s peculiar features to stress the commonality of its fauna and flora with the world The attempt to understand the island through science led to a domestication of its environment that created the image of a tame and known world capable of being controlled and used by Western powers At the heart of the exploration of Madagascar and its transformation in Western eyes from a strange world to a cash crop colony were missionaries and naturalists who relied upon global experiences to master the island by normalizing the peculiar qualities of Madagascar s environment This book reveals how the environment played a dominant role in understanding the island and its people and how current environmental debates have evolved from earlier policies and discussions about the environment
