Natural Ventilation In Buildings A Design Handbook:

Natural Ventilation in Buildings Francis Allard, 1998 AIOLOS is a computational tool for the calculation of the airflow rates in naturally ventilated buildings

A Guide to Natural Ventilation Design C. Don Manuel, 2014-06-03 This book is an attempt to combine all the books literatures researches and universities masters theses available for a shortcut fundamental knowledge to design basic passive or natural ventilation in residential homes As in depth studies in passive design will take years of immense work due to so many variables involved we tried to gather just enough information to provide you the basic working knowledge to start designing your simple naturally ventilated project We also included our NV study of a high rise building that was successfully built

Guide to Natural Ventilation in High Rise Office Buildings Antony Wood, Ruba Salib, 2013 This guide sets out recommendations for every phase of the planning construction and operation of natural ventilation systems in these buildings including local climatic factors that need to be taken into account how to plan for seasonal variations in weather and the risks in adopting different implementation strategies All of the recommendations are based on analysis of the research findings from richly illustrated international case studies This is the first technical guide from the Council on Tall Buildings and Urban Habitat s Tall Buildings Sustainability Working Group looking in depth at a key element in the creation of tall buildings with a much reduced environmental impact while taking the industry closer to an appreciation of what constitutes a sustainable tall building and what factors affect the sustainability threshold for tall

Natural Ventilation in the Urban Environment Francis Allard, Cristian Ghiaus, 2012-06-25 Throughout the world there is an increasing interest in ecological design of buildings and natural ventilation has proved to be the most efficient low energy cooling technique Its practical application however is hindered by the lack of information on the complex relationship between the building and its urban environment In this book a team of experts provide first hand information and tools on the efficient use of natural ventilation in urban buildings Key design principles are explained enabling readers to decide on the best solution for natural ventilation of buildings taking into account climate and urban context In the initial sketches architects need answers to open problems such as what kind of solution to adopt and how to modify existing strategies to exploit the potential of the site This book formalizes the multi criteria analysis of candidate solutions based on quantitative and qualitative estimation of the driving forces wind and buoyancy as well as of the barriers induced by the urban environment wind speed reduction noise and pollution and gives a methodology for optimal design of openings The book is accompanied by downloadable resources containing software for assessing the potential of a given site estimating wind speed and dimensioning the openings for natural ventilation The methodologies and tools are tested self contained and user friendly About the editors The editors Cristian Ghiaus and Francis Allard are affiliated with the University of La Rochelle France The authors and reviewers combine expertise from universities research institutions and industry in Belgium France Great Britain Greece Portugal and Switzerland

Designing Spaces for Natural Ventilation Ulrike Passe, Francine

Battaglia,2015-03-12 Buildings can breathe naturally without the use of mechanical systems if you design the spaces properly This accessible and thorough guide shows you how in more than 260 color diagrams and photographs illustrating case studies and CFD simulations You can achieve truly natural ventilation by considering the building s structure envelope energy use and form as well as giving the occupants thermal comfort and healthy indoor air By using scientific and architectural visualization tools included here you can develop ventilation strategies without an engineering background Handy sections that summarize the science explain rules of thumb and detail the latest research in thermal and fluid dynamics will keep your designs sustainable energy efficient and up to date **A Handbook on Low-Energy Buildings and District-Energy Systems** L.D. Danny Harvey,2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner Energy Simulation in Building Design Joseph Clarke,2007-11-02 Since the appearance of the first edition of Energy Simulation in Building Design the use of computer based appraisal tools to solve energy design problems within buildings has grown rapidly A leading figure in this field Professor Joseph Clarke has updated his book throughout to reflect these latest developments The book now includes material on combined thermal lighting and CFD simulation advanced glazings indoor air quality and photovoltaic components This thorough revision means that the book remains the key text on simulation for architects building engineering consultants and students of building engineering and environmental design of buildings The book s purpose is to help architects mechanical environmental engineers and energy facility managers to understand and apply the emerging computer methods for options appraisal at the individual building estate city region and national levels This is achieved by interspersing theoretical derivations relating to simulation within an evolving description of the built environment as a complex system The premise is that the effective application of any simulation tool requires a thorough understanding of the domain it addresses *CIBSE Guide H: Building Control Systems* Cibse,2007-06-01 Building Control Systems provides the building services engineer with a comprehensive understanding of modern control systems and relevant information technology This will ensure that the best form of control systems for the building is specified and that proper provision is

made for its installation commissioning operation and maintenance Beginning with an overview of the benefits of the modern building control system the authors describe the different controls and their applications and include advice on their set up and tuning for stable operation There are chapters on the practical design of control systems how to work from the hardware components and their inclusion in networks through to control strategies in Heating Ventilation and Air Conditioning HVAC systems and whole buildings The relationship between Building Management Systems BMS and information technology systems is discussed and the building procurement process and the importance of considering control requirements at an early stage in the design process

Urban Transition Marita Wallhagen, Mathias Cehlin, 2023-12-20 This book assembles the latest knowledge linked to urban environments and urban socio eco technological systems including urban energy transport material and ecosystems Urban environments and systems affect every person's life in many ways and can have negative impacts on the local and global environment They create value but sometimes with a high environmental cost from a lifecycle perspective Therefore scientists and global leaders call for an urban transition to create more urban environments and systems that are climate positive sustainable and healthy which is necessary for society to function within the planetary boundaries This is a great challenge Huge transformations and new ways of thinking regarding the design and co existence of technical social and ecological systems are necessary to turn the present challenge into opportunities This book *Urban Transition Perspectives on Urban Systems and Environments* explores this challenge and several different topics related to possible probable or necessary urban transitions in the urban environment It assembles a variety of authors who present many aspects and the latest knowledge linked to urban transitions of the urban environment and urban socio eco technological systems including urban energy transport building material and eco systems Furthermore the importance of urban systems and urban environments is seldom clearly linked to their impact on the environment and humans This book examines this gap the crucial issues relating to how urban systems influence the urban structure and how they can be formed and designed to become more sustainable It explores the link between the complex systems in cities the physicality of the built environment and the living environments for the people The book proposes a rich garden of ideas to provoke and develop current research debate and new forms of practice

Research in Building Physics and Building Engineering Paul Fazio, Hua Ge, Jiwu Rao, Guylaine Desmarais, 2020-11-26 Buildings influence people They account for one third of energy consumption across the globe and represent an annual capital expenditure of 7% 10% of GNP in industrialized countries Their lifetime operation costs can exceed capital investment Building Engineering aims to make buildings more efficient safe and economical One branch of this discipline Building Physics Science has gained prominence with a heightened awareness of such phenomena as sick buildings the energy crisis and sustainability and considering the performance of buildings in terms of climatic loads and indoor conditions The book reflects the advanced level and high quality of research which Building Engineering and Building Physics Science in particular have reached at the beginning of the twenty first century It
