**Nature and Science on the Pacific Coast** American Association for the Advancement of Science. Pacific Coast Committee,1915 The Pacific Coast region of the United States contains many distinctive natural features and much unique material for scientific research Many of the problems presented here are peculiar to the West but in their larger aspects they have a significant bearing upon fundamental questions of world wide concern both in the field of natural science and in the relation of these problems to the affairs of men However interesting western materials may be the traveler wishing to know of them has little time for study and sources of information which might be used are frequently scattered and inaccessible Recognizing the need for ready information on nature and science in the West the Pacific Coast Committee of the American Association for the Advancement of Science has considered it desirable in this year of the two expositions celebrating the opening of the Panama Canal to bring together in hand book form concise data upon matters of

general interest for the use of travelers in this region A special committee was appointed to assemble the material and to enlist the assistance of men well informed upon the subjects to be discussed The descriptions contained in this book have been prepared with care by specialists and the volume is addressed to all travelers in the West who wish to know the significant features of the land through which they pass c taken from Introductory Note page v      *Bibliography of Fossil Vertebrates, 1934-1938* Charles Lewis Camp, David Nathaniel Taylor, Samuel Paul Welles, 1942      **Nature** , 1879

**Nature's Ghosts** Mark V. Barrow, 2011-04-15 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature's Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson's day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them *Nature's Ghosts* offers an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead      *The Nature of Science* David M.
