## **Nature And History The Evolutionary Approach For Social Scientists:**

**Nature and History** Ignazio Masulli, 1990 First Published in 1990 Routledge is an imprint of Taylor Francis an informal company *Nature and History* Ignazio Masulli, 2019-06-07 Originally published in 1990 *Nature and History* examines how Darwin's theory of evolution has been expanded by scholars and researchers to include virtually every scientific discipline. The book presents a morphological analysis of historical and social sciences which have traditionally been viewed as too random in their progressions to conform to a model. Through the evaluation of empirical and factual evidence, the book builds a case for an evolutionary paradigm which encompasses both natural and social sciences and presents the forms of adaptiveness in working historical models. [Systems Science and Cybernetics - Volume I](#) Francisco

Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects. This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects, advances in the theories on their interrelations, the enormous computational capacity provided by IT hardware and software, and the critical revisiting of subject-object interaction, not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale. The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi-disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic. This subject entry is subdivided into four sections. The first, an introduction to systemic theories, addresses the historic development of the most commonly used systemic approaches from new concepts such as the so-called geometry of thinking or the systemic treatment of non-systemic identities to the taxonomic, entropic, axiological and ethical problems deriving from a general systemic cybernetic conceit. Hence the focus in this section is on the historic and philosophical aspects of the subject. Moreover, it may be asserted today that beyond a shadow of a doubt, problems in particular problems deriving from human interaction, but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable. Reaching such a perspective requires taking at least the following well-known steps: a statement of the problem from the determinant variables or phenomena; b) adoption of theoretical models showing the interrelationships among such variables; c) use of the maximum amount of wherever possible quantitative information available on each; d) placement of the set of variables in an environment that inevitably pre-determines the problem. That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades. The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations. Certain sub-themes are discussed.

by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

*Evolutionary Psychology* Neil Levy, 2017-03-02 Evolutionary approaches to the study of human beings have been able to explain the origin and maintenance of many of the features of our bodies Many thinkers believe that an evolutionary approach will be equally fruitful when it comes to explaining the features of our minds Since our behaviour is driven by our minds our cognitive dispositions and processes are likely to have been a target of selection and adaptation This volume collects recent prominent explorations of this theme as well as the voices of dissenters who argue that our minds are far more significantly the product of culture than of evolution

*The Nature of Selection* Elliott Sober, 2014-12-10 The Nature of Selection is a straightforward self contained introduction to philosophical and biological problems in evolutionary theory It presents a powerful analysis of the evolutionary concepts of natural selection fitness and adaptation and clarifies controversial issues concerning altruism group selection and the idea that organisms are survival machines built for the good of the genes that inhabit them Sober's is the answering philosophical voice the voice of a first rate philosopher and a knowledgeable student of contemporary evolutionary theory His book merits broad attention among both communities It should also inspire others to continue the conversation Philip Kitcher Nature Elliott Sober has made extraordinarily important contributions to our understanding of biological problems in evolutionary biology and causality The Nature of Selection is a major contribution to understanding epistemological problems in evolutionary theory I predict that it will have a long lasting place in the literature Richard C Lewontin

*New Evolutionary Social Science* Heinz-Jurgen Niedenzu, Tamas Meleghy, Peter Meyer, 2015-11-17 Social scientists have long declared their autonomy from the natural sciences and in doing so have tended to neglect important biological constraints on human nature Many sociological theories have suggested a nearly complete malleability of patterns of social life The New Evolutionary Social Science challenges this view by building on Stephen K Sanderson's Darwinian conflict theory which sets out to synthesise sociological theories with key findings from biology into an overarching scientific paradigm Configuring and expanding this groundbreaking theory the contributors to this volume are well known European and American experts in evolutionary science The New Evolutionary Social Science develops a new basis for understanding social change and the world's future through a better integration of the natural and social sciences
