research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education Enlightenment, Modernity and Science Paul A. Elliot, 2010-10-30 Scientific culture was one of the defining characteristics of the English Enlightenment The latest discoveries were debated in homes institutions and towns around the country But how did the dissemination of scientific knowledge vary with geographical location What were the differing influences in town and country and from region to region Enlightenment Modernity and Science provides the first full length study of the geographies of Georgian scientific culture in England The author takes the reader on a tour of the principal arenas in which scientific ideas were disseminated including home town and countryside to show how cultures of science and knowledge varied across the Georgian landscape Taking in key figures such as Erasmus Darwin Abraham Bennett and Joseph Priestley along the way it is a work that sheds important light on the complex geographies of Georgian English scientific culture *On Knowing--The Natural Sciences* Richard P. McKeon, 1994-01-15 Well before the current age of discourse deconstruction and multiculturalism Richard McKeon propounded a philosophy of pluralism showing how facts and values are dependent on diverse ways of reading texts This book is a transcription of an entire course including both lectures and student discussions taught by McKeon As such it provides an exciting introduction to McKeon's conception of pluralism a central aspect of neo Pragmatism while demonstrating how pluralism works in a classroom setting In his lectures McKeon outlines the entire history of Western thinking on the sciences Treating the central concepts of motion space time and cause he traces modern intellectual debates back to the ancient Greeks notably Plato Aristotle Democritus and the Sophists As he brings the story of Western science up to the twentieth century he uses his fabled semantic schema reproduced here for the first time to uncover new ideas and observations about cosmology mechanics dynamics and other aspects of physical science Illustrating the broad historical sweep of the lectures are a series of discussions which give detail to the course's intellectual framework These discussions of Plato Aristotle Galileo Newton and Maxwell are perhaps the first published rendition of a philosopher in literal dialogue with his students Led by McKeon's pointed questioning the discussions reveal the difficulties and possibilities of learning to engage in serious intellectual communication Undergraduate Announcement University of Michigan--Dearborn, 1983

*Hilbert, Göttingen and the Development of Modern Mathematics* Joan Roselló, 2019-02-01 David Hilbert is one of the outstanding mathematicians of the twentieth century and probably the most influential This book highlights Hilbert's contributions to mathematics putting them in their historical social and cultural context In doing so particular attention is paid to Hilbert's axiomatic method and his proposal for the foundations of mathematics the so called Hilbert's program The book also discusses the development of algebraic number theory the theory of integral equations modern algebra and the structural image of mathematics In addition it considers the famous list of Mathematical Problems presented in Paris in 1900 the mathematical tradition of the University of Göttingen the great debate on the foundations of mathematics in the twenties

between formalists and intuitionists and finally Hilbert's work on the theory of relativity and the foundations of quantum mechanics The book will primarily appeal to an academic audience although it will also be of interest to general interest science readers

**How to Best Teach Bioethics** Nordisk Ministerråd,2004 Teaching Bioethics a Nordic Workshop on How to Best Teach Bioethics was organized by the Nordic Committee on Bioethics and the Nordic Academy for Advanced Study NorFA in March 2003 The workshop brought together thirty one participants PhD students researchers teachers and administrators from all the Nordic and Baltic countries in addition to twenty speakers as well as most members of the Nordic Committee on Bioethics The report based on the workshop provides an introduction to the question of teaching bioethics and discusses how to communicate ethical and scientific issues to journalists and to the general public The report concentrates on particular methods of teaching bioethics and illustrates the methods with different topics Also included in the report are articles based on most of the presentations of methods of teaching bioethics given at the workshop as well as articles by four of the participants describing their experience of and views on the workshop     Origins of Darwin's Evolution J. David

Archibald,2017-10-10 Historical biogeography the study of the history of species through both time and place first convinced Charles Darwin of evolution This field was so important to Darwin's initial theories and line of thinking that he said as much in the very first paragraph of *On the Origin of Species* 1859 and later in his autobiography His methods included collecting mammalian fossils in South America clearly related to living forms tracing the geographical distributions of living species across South America and sampling peculiar fauna of the geologically young Galapagos Archipelago that showed evident affinities to South American forms Over the years Darwin collected other evidence in support of evolution but his historical biogeographical arguments remained paramount so much so that he devotes three full chapters to this topic in *On the Origin of Species* Discussions of Darwin's landmark book too often give scant attention to this wealth of evidence and we still do not fully appreciate its significance in Darwin's thinking In *Origins of Darwin's Evolution* J David Archibald explores this lapse showing how Darwin first came to the conclusion that instead of various centers of creation species had evolved in different regions throughout the world He also shows that Darwin's other early passion geology proved a more elusive corroboration of evolution *On the Origin of Species* has only one chapter dedicated to the rock and fossil record as it then appeared too incomplete for Darwin's evidentiary standards Carefully retracing Darwin's gathering of evidence and the evolution of his thinking *Origins of Darwin's Evolution* achieves a new understanding of how Darwin crafted his transformative theory
