Connection to Nature, Deep Ecology, and Conservation Social Science Christian Diehm, 2020-12-15 In Connection to Nature Deep Ecology and Conservation Social Science Human Nature Bonding and Protecting the Natural World Christian Diehm analyzes the relevance of the philosophy of deep ecology to contemporary discussions of human nature connectedness Focusing on deep ecologists notion of identification with nature Diehm argues that deep ecological theory is less conceptually problematic than is sometimes thought and offers valuable insights into what a sense of connection to nature entails what its attitudinal and behavioral effects might be and how it might be nurtured and developed This book is closely informed by and engages at length with conservation social science which Diehm draws on to assess the claims of deep ecology theorists resolve long standing problems associated with their work investigate the impacts of time outdoors on human nature bonding and critically review the biophilia hypothesis Emphasizing the foundational role of ecologically inclusive identities in pro environmental attitudes and behaviors Diehm demonstrates that having a sense of connection to nature is more important than many environmental advocates have realized and that deep ecology has much to add to the increasingly pressing conversations about it

**Synchronicity** Paul Halpern, 2020-08-18 From Aristotle's Physics to quantum teleportation, learn about the scientific pursuit of instantaneous connections in this insightful examination of our world For millennia, scientists have puzzled over a simple question: Does the universe have a speed limit? If not, some effects could happen at the same instant as the actions that caused them, and some effects ludicrously might even happen before their causes By one hundred years ago, it seemed clear that the speed of light was the fastest possible speed Causality was safe And then quantum mechanics happened, introducing spooky connections that seemed to circumvent the law of cause and effect Inspired by the new physics, psychologist Carl Jung and physicist Wolfgang Pauli explored a concept called synchronicity, a weird phenomenon they thought could link events without causes Synchronicity tells that sprawling tale of insight and creativity and asks where these ideas, some plain crazy and others crazy powerful, are taking the human story next

**The Web of Life Imperative** Michael J. Cohen, 2003 A book and course that teaches you the Natural Systems Thinking Process A nature-connected learning tool enables our psyche to genuinely tap the healing powers of nature and regenerate 48 peaceful natural intelligences in our awareness and thinking Backyard or backcountry, this practical multiple-sense book empowers you to improve your health, relationships, and happiness by replacing destructive omissions in how we learn to think with rejuvenated natural sensitivities Learn how to reconnect your psyche to its nurturing origins in the restorative vigor, sustainability, and peace of nature Help yourself and your community benefit from the profound renewal that lies in the magnificence of a beautiful day, the wisdom of an ancient tree, and the fortitude of a weed Let nature's invincible healing energies help your thinking transform your stress disorders and harmful bonds into constructive personal, social, and environmental rewards Grow from hands-on, accredited Applied Biophilia classes, essays, activities, research, internships, ethics counseling, and healing Strengthen your inborn natural genius Enjoy an Earth-friendly job, career, internship, or teaching certification Take advantage of subsidized online courses and degree programs To understand how and why this book will work for you, as it has for so many others, consider the following key intelligence test question: one that ordinarily might help assess a person's mathematical aptitude If you count a dog's tail as one of its legs, how many legs does a dog have? Five, of course, is the correct answer for a math test Intelligent people say five because it is valid in mathematical systems and contemporary thinking and is highly regarded and rewarded by our society However, we don't solely live our lives or think in mathematical systems Our natural sense of reason can consider what we know from our actual contact with a real, normal dog, too That's when our multitude of other natural senses come into play: senses of touch, motion, color, texture, language, sound, smell, consciousness, community, trust, contrast, and love They each provide further information and help our sense of reason make more sense and a more informed decision They enable our thinking to register that a tail is different than a leg

that a dog has four legs not five no matter what might be correct in mathematical logic It is a grave mistake for anyone not to take seriously the difference between 4 leg and 5 leg ways of knowing and our learned prejudice for the latter As this book shows when they are not in balance the schism between their two different ways of registering the world is significant Four leg knowing is a magnificent psychological and physiological phenomenon with deep natural system roots into the eons the heart of Earth and our psyche It brings our widely diverse multiplicity of natural sensory experiences into our awareness Five leg knowing produces important awareness through abstract imagination labels and stories However when it does not also seek and contain 4 leg knowledge it results not only in our desensitization but in the separation of our thinking from the regenerative powers of Earth s natural systems within and around us This profound loss produces the many destructive side effects of our artificial world that we can not readily solve Four leg versus 5 leg discord creates an entrenched conflict in our psyche between how we think and how nature works This is a point source of the stress and contamination our society produces in the integrity of people and the environment It generates our many disorders and troubles that are seldom found in nature It is important to recognize is that by financially and socially rewarding us for getting good grades or for making the grade by using nature isolated 5 leg thinking our socialization habitually bonds conditions programs or ad     *Ignoring Nature No More* Marc Bekoff,2013-06-01 For far too long humans have been ignoring nature As the most dominant overproducing overconsuming big brained big footed arrogant and invasive species ever known we are wrecking the planet at an unprecedented rate And while science is important to our understanding of the impact we have on our environment it alone does not hold the answers to the current crisis nor does it get people to act In *Ignoring Nature No More* Marc Bekoff and a host of renowned contributors argue that we need a new mind set about nature one that centers on empathy compassion and being proactive This collection of diverse essays is the first book devoted to compassionate conservation a growing global movement that translates discussions and concerns about the well being of individuals species populations and ecosystems into action Written by leading scholars in a host of disciplines including biology psychology sociology social work economics political science and philosophy as well as by locals doing fieldwork in their own countries the essays combine the most creative aspects of the current science of animal conservation with analyses of important psychological and sociocultural issues that encourage or vex stewardship The contributors tackle topics including the costs and benefits of conservation behavioral biology media coverage of animal welfare conservation psychology and scales of conservation from the local to the global Taken together the essays make a strong case for why we must replace our habits of domination and exploitation with compassionate conservation if we are to make the world a better place for nonhuman and human animals alike     **Regenerative-Adaptive Design for Sustainable Development** Phillip B. Roös,2020-09-15 In this book the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that incorporates the principles of regenerative design as well as an

adaptive pattern language that re-establishes our wholeness with nature and considers the vulnerabilities of a changing landscape. The book examines an integral approach to contemporary theories of planning and design that explores the human-nature relationship patterns in social and spatial interconnections between people and their natural environments. The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature. In 12 chapters, the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities' responses for sustainable development. The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia. The concluding chapters argue that for human settlements and cities to be resilient and sustainable, we must understand the interconnected patterns of human-built environments and natural systems and how we function in a social-spatial dimension with these. The book is intended for practitioners and academic scholars with interest in sustainable development, regenerative design, pattern languages, biophilia, settlement planning, and climate change adaptation.
