Space, Time, and Memory Lynn Nadel,Sara Aronowitz,2025-05-07 This is an open access title available under the terms of a CC BY NC ND 4 0 licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations Memories are not organized by a single arbitrary dimension such as mere association

Instead many dimensions have been taken to be part of the structure of memory Of these space and time stand out all personal experience can in principle be indexed by where and when specific events occurred and both scientific evidence and common sense suggest that the way we relate different events together in memory draws on these dimensions For instance to remember what one ate for lunch last Thursday one might call up a memory of where one was or retrace the events of the day leading up to lunch Some nuts and bolts questions arise immediately starting with whether the spatial or the temporal dimension is primary Or rather do we rely on both equally Do we represent them separately or jointly But there are bigger questions with broad implications What makes space and time such central structures in our cognitive world and what is the conceptual nature of these structures These questions are deeply related to one another though they span multiple fields and methodologies touching on philosophy psychology and neuroscience Space Time and Memory explores three key questions first the role of space and time as structures that organize memory second theories of the nature of memory itself that draw on space and time and finally applications of questions about the structure of memory to debates about perception decision making and artificial intelligence
