Neandertals And Modern Humans In Western Asia:

Neandertals and Modern Humans in Western Asia Takeru Akazawa, Kenichi Aoki, Ofer Bar-Yosef, 2013-05-22 In this fascinating volume the Middle Paleolithic archaeology of the Middle East is brought to the current debate on the origins of modern humans These collected papers gather the most up to date archaeological discoveries of Western Asia a region that is often overshadowed by African or European findings but the only region in the world where both Neandertal and early modern human fossils have been found The collection includes reports on such well known cave sites as Kebara Hayonim and Qafzeh among others The information and interpretations available here are a must for any serious researcher or student of anthropology or human evolution

Neandertals and Modern Humans in Western Asia Takeru Akazawa, Kenichi Aoki, Ofer Bar-Yosef, 2005-12-27 In this fascinating volume the Middle Paleolithic archaeology of the Middle East is brought to the current debate on the origins of modern humans These collected papers gather the most up to date archaeological discoveries of Western Asia a region that is often overshadowed by African or European findings but the only region in the world where both Neandertal and early modern human fossils have been found The collection includes reports on such well known cave sites as Kebara Hayonim and Qafzeh among others The information and interpretations available here are a must for any serious researcher or student of anthropology or human evolution

Bones, Stones and Molecules David W. Cameron, Colin P. Groves, 2004-07-08 *Bones Stones and Molecules* provides some of the best evidence for resolving the debate between the two hypotheses of human origins The debate between the Out of Africa model and the Multiregional hypothesis is examined through the functional and developmental processes associated with the evolution of the human skull and face and focuses on the significance of the Australian record The book analyzes important new discoveries that have occurred recently and examines evidence that is not available elsewhere Cameron and Groves argue that the existing evidence supports a recent origin for modern humans from Africa They also specifically relate these two theories to interpretations of the origins of the first Australians The book provides an up to date interpretation of the fossil archaeological and the molecular evidence specifically as it relates to Asia and Australia in particular Readily accessible to the layperson and professional Provides concise coverage of current scientific evidence Presents a robust computer generated model of human speciation over the last 7 million years Well illustrated with figures and photographs of important fossil specimens Presents a synthesis of great ape and human evolution

Dynamics of Learning in Neanderthals and Modern Humans Volume 1 Takeru Akazawa, Yoshihiro Nishiaki, Kenichi Aoki, 2013-12-16 This volume presents the first of two proceedings from the International Conference on the Replacement of Neanderthals by Modern Humans which took place in Tokyo in November 2012 Focussing on a highly innovative working hypothesis called the learning hypothesis which attempts to explain the replacement as a result of differences in the learning abilities of these two hominid populations the conference served as the latest multidisciplinary discussion forum on this intriguing Palaeoanthropological issue The present volume

reports on outcomes of the conference in three major sections Part 1 provides an archaeological overview of the processes of replacement assimilation of Neanderthals by modern humans Part 2 consists of archaeological and ethnographic case studies exploring evidence of learning behaviours in prehistoric and modern hunter gatherer societies Part 3 presents a collection of papers that directly contributes to the definition validation and testing of the learning hypothesis in terms of population biology and evolutionary theory A total of 18 papers in this volume make available to readers unique cultural perspectives on mechanisms of the replacement assimilation of Neanderthals by modern humans and suggested relationships between these mechanisms and different learning strategies

Biosphere to Lithosphere Terry O'Connor, 2016-09-12 Taphonomic studies are a major methodological advance the effects of which have been felt throughout archaeology Zooarchaeologists and archaeobotanists were the first to realise how vital it was to study the entire process of how food enters the archaeological record and taphonomy brought to a close the era when the study of animal bones and plant remains from archaeological sites were regarded mainly as environmental indicators This volume is indicative of recent developments in taphonomic studies hugely diverse research areas are being explored many of which would have been totally unforeseeable only a quarter of a century ago

Neanderthals Revisited Katerina Harvati, Terry Harrison, 2007-03-14 This volume presents the cutting edge research of leading scientists re examining the major debates in Neanderthal research with the use of innovative methods and exciting new theoretical approaches Coverage includes the re evaluation of Neanderthal anatomy inferred adaptations and habitual activities developmental patterns phylogenetic relationships and the Neanderthal extinction new methods include computer tomography 3D geometric morphometrics ancient DNA and bioenergetics The book offers fresh insight into both Neanderthals and modern humans

Origins of Human Innovation and Creativity Scott A. Elias, 2012-08-29 Innovation and creativity are two of the key characteristics that distinguish cultural transmission from biological transmission This book explores a number of questions concerning the nature and timing of the origins of human creativity What were the driving factors in the development of new technologies What caused the stasis in stone tool technological innovation in the Early Pleistocene Were there specific regions and episodes of enhanced technological development or did it occur at a steady pace where ancestral humans lived The authors are archaeologists who address these questions armed with data from ancient artefacts such as shell beads used as jewelry primitive musical instruments and sophisticated techniques required to fashion certain kinds of stone into tools Providing state of art discussions that step back from the usual archaeological publications that focus mainly on individual site discoveries this book presents the full picture on how and why creativity in Middle to Late Pleistocene archeology anthropology evolved Gives a full original and multidisciplinary perspective on how and why creativity evolved in the Middle to Late Pleistocene Enhances our understanding of the big leaps forward in creativity at certain times Assesses the intellectual creativity of Homo erectus H neanderthalensis and H sapiens via their artefacts

Emergence and Diversity of Modern Human Behavior in Paleolithic Asia Yousuke Kaifu, Masami

Izuho, Ted Goebel, Hiroyuki Sato, Akira Ono, 2014-12-19 Despite the obvious geographic importance of eastern Asia in human migration its discussion in the context of the emergence and dispersal of modern humans has been rare Emergence and Diversity of Modern Human Behavior in Paleolithic Asia focuses long overdue scholarly attention on this under studied area of the world Arising from a 2011 symposium sponsored by the National Museum of Nature and Science in Tokyo this book gathers the work of archaeologists from the Pacific Rim of Asia Australia and North America to address the relative lack of attention given to the emergence of modern human behavior as manifested in Asia during the worldwide dispersal from Africa

The Evolution of Hominin Diets Jean-Jacques Hublin, Michael P. Richards, 2009-05-15 Michael P Richards and Jean Jacques Hublin The study of hominin diets and especially how they have primates modern humans 2 faunal and plant studies 3 evolved throughout time has long been a core research archaeology and paleoanthropology and 4 isotopic studies area in archaeology and paleoanthropology but it is also This volume therefore presents research articles by most of becoming an important research area in other fields such as these participants that are mainly based on their presentations primatology nutrition science and evolutionary medicine at the symposium As can hopefully be seen in the volume Although this is a fundamental research topic much of the these papers provide important reviews of the current research research continues to be undertaken by specialists and there in these areas as well as often present new research on dietary is with some notable exceptions e g Stanford and Bunn evolution 2001 Ungar and Teaford 2002 Ungar 2007 relatively lit In the section on modern studies Hohmann provides a tle interaction with other researchers in other fields This is review of the diets of non human primates including an unfortunate as recently it has appeared that different lines interesting discussion of the role of food sharing amongst of evidence are causing similar conclusions about the major these primates Snodgrass Leonard and Roberston provide issues of hominid dietary evolution i e Neanderthals in the Levant Donald O. Henry, 2003-10-01 The volume traces the controversy that revolves around the bio cultural relationships of Archaic Neanderthal and Modern humans at global and regional Levantine scales The focus of the book is on understanding the degree to which the behavioral organization of Archaic groups differed from Moderns To this end a case study is presented for a 44 70 000 year old Middle Paleolithic occupation of a Jordanian rockshelter The research centering on the spatial analysis of artifacts hearths and related data reveals how the Archaic occupants of the shelter structured their activities and placed certain conceptual labels on different parts of the site The structure of Tor Faraj is compared to site structures defined for modern foragers in both ethnographic and archaeological contexts to measure any differences in behavioral organization The comparisons show very similar structures for Tor Faraj and its modern cohorts The implications of this finding challenge prevailing views in the emergence of modern human controversy in which Archaic groups are thought to have had inferior cognition and less complex behavioral social organization than modern foragers And it is generally thought that such behaviors only emerged after the appearance of the Upper Paleolithic dated some 10 20 000 years later than the

occupation of Tor Faraj *Human Paleontology and Prehistory* Assaf Marom, Erella Hovers, 2017-01-24 The aim of the book is to present original and though provoking essays in human paleontology and prehistory which are at the forefront of human evolutionary research in honor of Professor Yoel Rak a leading scholar in paleoanthropology The volume presents a collection of original papers contributed by many of Yoel's friends and colleagues from all over the globe Contributions from experts around the globe fall roughly into three broad categories Reflections on some of the broad theoretical questions of evolution and especially about human evolution the early hominins with special emphasis on *Australopithecus afarensis* and *Paranthropus* and the Neanderthals that contentious group of our closest extinct relatives Within and across these categories nearly every paper addresses combinations of methodological analytical and theoretical questions that are pertinent to the whole human evolutionary time span This book will appeal most to scholars and advanced students in paleoanthropology human paleontology and prehistoric archaeology *Human Evolution Source Book* Russell L. read for students grad students and professionals in human evolution and paleoanthropology Climate Change and Human Responses Gregory Monks, 2017-03-21 This book contributes to the current discussion on climate change by presenting selected studies on the ways in which past human groups responded to climatic and environmental change In particular the chapters show how these responses are seen in the animal remains that people left behind in their occupation sites Many of these bones represent food remains so the environments in which these animals lived can be identified and human use of those environments can be understood In the case of climatic change resulting in environmental change these animal remains can indicate that a change has occurred in climate environment and human adaptation and can also indicate the specific details of those changes **From Tools to Symbols** Francesco d'Errico, Lucinda Backwell, Bernard Malauzat, 2005-06-01 A number of researchers have tried to characterise the anatomy and behavioural systems of early hominid and early modern human populations in an attempt to understand how we became what we are Can archaeology palaeo anthropology and genetics tell us how and when human cultures developed the traits that make our societies different from those of our closest living relatives In which cases are these differences substantial and when do they simply reflect our definitions of culture species the image we have of their evolution or of ourselves From Tools to Symbols a collection of twenty seven selected papers from a South African French conference organised in honour of the well known palaeo anthropologist Phillip Tobias provides a multidisciplinary overview of this field of study It is based on collaborative research conducted in sub Saharan Africa by South African French American and German scholars in the last twenty years and represents an excellent synthesis of the palaeontological and archaeological evidence of the last five million years of human evolution **Sourcebook of Paleolithic Transitions** Marta Camps, Parth Chauhan, 2009-09-01 As the study of Palaeolithic technologies moves towards a more analytical approach it is necessary to determine a consistent procedural framework The contributions to this timely and comprehensive volume do just that This volume incorporates a broad chronological and geographical range of Palaeolithic material from the Lower to Upper Palaeolithic The focus of this volume is to provide an analysis of Palaeolithic technologies from a quantitative empirical perspective As new techniques particularly quantitative methods for analyzing Palaeolithic technologies gain popularity this work provides case studies particularly showcasing these new techniques Employing diverse case studies and utilizing multivariate approaches morphometrics model based approaches phylogenetics cultural transmission studies and experimentation this volume provides insights from international contributors at the forefront of recent methodological advances *The Geography of Neandertals and Modern Humans in Europe and the Greater Mediterranean* Ofer Bar-Yosef, 2000 During the Middle Paleolithic various populations ancestral to modern Homo sapiens inhabited Africa while Europe was homeland to the Neandertals Recent archaeological investigations have provided data showing that the abrupt transition from the Middle to the Upper Neolithic during which these populations met and interacted was a fast moving period of change for both groups In this volume the expansion of modern humans and

their impact on the populations of Neandertals in Europe Western Asia and Northern Africa is discussed in depth with particular focus on the lithic industries of the late Middle and early Upper Paleolithic

Transitions Before the Transition Erella Hovers, Steven Kuhn, 2007-01-06 Modern human origins and the fate of the Neanderthals are arguably the most compelling and contentious arenas in paleoanthropology The much discussed split between advocates of a single early emergence of anatomically modern humans in sub Saharan Africa and supporters of various regional continuity positions is only part of the picture Equally if not more important are questions surrounding the origins of modern behavior and the relationships between anatomical and behavioral changes that occurred during the past 200 000 years Although modern humans as a species may be defined in terms of their skeletal anatomy it is their behavior and the social and cognitive structures that support that behavior which most clearly distinguish Homo sapiens from earlier forms of humans This book assembles researchers working in Eurasia and Africa to discuss the archaeological record of the Middle Paleolithic and the Middle Stone Age This is a time period when Homo sapiens last shared the world with other species and during which patterns of behavior characteristic of modern humans developed and coalesced Contributions to this volume query and challenge some current notions about the tempo and mode of cultural evolution and about the processes that underlie the emergence of modern behavior The papers focus on several fundamental questions Do typical elements of modern human behavior appear suddenly or are there earlier archaeological precursors of them Are the archaeological records of the Middle Paleolithic and Middle Stone Age unchanging and monotonous or are there detectable evolutionary trends within these periods Coming to diverse conclusions the papers in this volume open up new avenues to thinking about this crucial interval in human evolutionary history

Continuity and Discontinuity in the Peopling of Europe Silvana Condemi, Gerd-Christian Weniger, 2011-03-23 Since the Western world first became aware of the existence of Neanderthals this Pleistocene human has been a regular focus of interest among specialists and also among the general public In fact we know far more about Neanderthals than we do about any other extinct human population Furthermore over the past 150 years no other palaeospecies has been such a constant source of discussion and fierce debate among palaeoanthropologists and archaeologists This book presents the status of our knowledge as well as the methods and techniques used to study this extinct population and it suggests perspectives for future research

Middle and Upper Paleolithic Sites in the Eastern Hemisphere Yoshihiro Nishiaki, Yasuhisa Kondo, 2023-08-22 This book provides an overview of the archaeological sites and cultural assemblages in the world and presents an archaeological database that has been established through two large scale research projects conducted between 2010 and 2022 The projects were Replacement of the Neanderthals by Modern Humans 2010 2015 and The Cultural History of PaleoAsia 2016 2022 both of which were carried out with the aid of the Japanese Government They deal with multi disciplinary studies of the demise of more archaic hominins and the survival of anatomically modern humans Although the database is designated PaleoAsiaDB which may imply a focus on Asia it

incorporates the dataset collected from Africa and Europe by the Replacement of the Neanderthals by Modern Humans project PaleoAsiaDB provides a list of more than 3 300 sites and 7 600 cultural assemblages of the Middle and Upper Paleolithic Middle and Late Stone Age of the Eastern Hemisphere as of 2020 This database is the first attempt of its kind to document the related sites of 200 20ka The full version of the database is available at the University Museum on the University of Tokyo homepage
