The Last Neanderthal Ian Tattersall, 1999-12-02 Scientists have long known that the popular image of the Neanderthal as a primitive hairy heavily browed club wielding brute is not supported by the fossil evidence But to date no such consensus has existed on the riddle of Neanderthals disappearance The Last Neanderthal written by one of the most respected authorities on the subject and supported by a dazzling wealth of material paints the first full portrait of the most familiar and haunting of human relatives Drawing on the latest findings and sophisticated new techniques of analysis Ian Tattersall marshals the best available evidence to unravel the mysteries of the Neanderthals who they were how they lived how they succeeded for so long Drawing on his own research and the work of others Tattersall takes on the most fascinating question of all what happened to them This revised edition is fully updated to include information on Tattersall's recent survey of all known Neanderthal fossils cutting edge work with Neanderthal DNA and new discoveries in Spain

Assimilation Or Replacement - a Study about Neanderthals and Modern Humans Christian Schäfer, 2009-08 Essay from the year 2005 in the subject Biology Evolution grade A very good Umea University Department of Ecology and Environmental Sciences course Evolutionary Ecology 14 entries in the bibliography language English abstract The Neanderthals lived in Europe and the Near East for at least 250 000 years and they outdared several climate changes They were capable of surviving in a harsh cold environment and were well adapted to it cultural and

morphological Thus the Neanderthals have been proven to be a successful human kind But why then did they disappear so quickly and without a trace just between 40 000 and 28 000 yr BP years before present 8 One possible answer is that modern humans starting to invade the Near East and Europe out of Africa 45 000 to 40 000 yr BP have outcompeted them due to higher cultural and mental abilities using the resources in a more efficient way than the Neanderthals But is this really true Have modern humans really had higher abilities Did they admix with the local Neanderthal populations integrating the native genes in their gene pool Or did modern humans not interbreed with them And the big question were Neanderthals and anatomically modern humans distinct species or just local variants of the same species To bring more light into this scenario these questions will be answered in the following chapters using genetic morphological and simulation data that has been brought up by several researchers over the last years Answering these fundamental questions also lies in the range of basic needs of human mind we all want to know where we come from who was our ancestor and who was it not To realize which strange ways evolution sometimes takes and to determine what really happened is for sure an exciting thing and that is exactly what researchers do when they trace human evolution back to the point when Neanderthals and modern humans met in Europe during the last ice age Only one of them should

Dynamics of Learning in Neanderthals and Modern Humans Volume 1

Takeru Akazawa, Yoshihiro Nishiaki, Kenichi Aoki, 2013-12-16 This volume presents the first of two proceedings from the International Conference on the Replacement of Neanderthals by Modern Humans which took place in Tokyo in November 2012 Focussing on a highly innovative working hypothesis called the learning hypothesis which attempts to explain the replacement as a result of differences in the learning abilities of these two hominid populations the conference served as the latest multidisciplinary discussion forum on this intriguing Palaeoanthropological issue The present volume reports on outcomes of

the conference in three major sections Part 1 provides an archaeological overview of the processes of replacement assimilation of Neanderthals by modern humans Part 2 consists of archaeological and ethnographic case studies exploring evidence of learning behaviours in prehistoric and modern hunter gatherer societies Part 3 presents a collection of papers that directly contributes to the definition validation and testing of the learning hypothesis in terms of population biology and evolutionary theory A total of 18 papers in this volume make available to readers unique cultural perspectives on mechanisms of the replacement assimilation of Neanderthals by modern humans and suggested relationships between these mechanisms and different learning strategies *The Neanderthals* Stephanie Muller, Friedemann Shrenk, 2008-10-27 Comprehensive and in depth The Neanderthals sets out the history of their discovery and the changing ideas of their place in human ancestry
