Reading and Spelling Clare Wood,Vincent Connelly,2009-09-10 With contributions from leading international researchers Contemporary Perspectives on Reading and Spelling offers a critique of current thinking on the research literature into reading reading comprehension and writing Each paper in this volume provides an account of empirical research that challenges aspects of accepted models and widely accepted theories about reading and spelling This book develops the argument for a need to incorporate less widely cited research into popular accounts of written language development and disability challenging the idea that the development of a universal theory of written language development is attainable The arguments within the book are explored in three parts overarching debates in reading and spelling reading and spelling across languages written language difficulties and approaches to teaching Opening up the existing debates and incorporating psychological theory and the politics surrounding the teaching and learning of reading and spelling this edited collection offers some challenging points for reflection about how the discipline of psychology as a whole approaches the study of written language skills Highlighting ground breaking new perspectives this book forms essential reading for all researchers and practitioners with a focus on the development of reading and spelling skills **Speaking, Reading, and Writing in**

Children With Language Learning Disabilities Katharine G. Butler,Elaine R. Silliman,2001-12 This work shows that being literate requires more than functional literacy the recognition of printed words as meaningful It requires the knowledge of how to use language as a tool for analysing synthesizing and integrating what is heard or read in order to arrive at new interpretations **Reading Development in Chinese Children** Catherine McBride-Chang,Hsuan-Chih

Chen,2003-12-30 This text reviews both similarities and unique cultural linguistic and script differences of Chinese relative to alphabetic reading and even across Chinese regions Chinese reading acquisition relies upon children s strongly developing analytic skills as highlighted here These 16 chapters present state of the art research on diverse aspects of Chinese children s reading development This edited volume presents research on Chinese children s reading development across Chinese societies Authors from China Hong Kong Singapore and Taiwan among others present the latest findings on how Chinese children learn to read Reading acquisition in Chinese involves some parameters typically not encountered in some other orthographies such as English For example Chinese readers in different regions might speak different mutually unintelligible languages be taught to read with or without the aid of a phonetic coding system and learn different scripts This book both implicitly and explicitly considers these and other contextual issues in relation to developmental and cognitive factors

involved in Chinese literacy acquisition One of the clearest themes to emerge from this volume is that across regions Chinese children despite lack of explicit teaching of phonetic or semantic character components learn to read largely by integrating visible print sound and print meaning connections Rather than learning to read Chinese characters by rote as is sometimes mistakenly believed these children are analytic learners Chapters in this book also cover such topics as Chinese children's reading comprehension cognitive characteristics of good and poor readers and reading strategies of bilingual and biscriptal readers This book is a useful reference for anyone interested in understanding either developing or skilled reading of Chinese or for those interested in literacy learning across cultures
