## **Science And Environmental Decision Making:**

**Science and Environmental Decision Making** Mark Huxham,2000      **Decision Making for the Environment** National Research Council,Division of Behavioral and Social Sciences and Education,Center for Economic, Governance, and International Studies,Committee on the Human Dimensions of Global Change,Panel on Social and Behavioral Science Research Priorities for Environmental Decision Making,2005-07-01 With the growing number complexity and importance of environmental problems come demands to include a full range of intellectual disciplines and scholarly traditions to help define and eventually manage such problems more effectively Decision Making for the Environment Social and Behavioral Science Research Priorities is the result of a 2 year effort by 12 social and behavioral scientists scholars and practitioners The report sets research priorities for the social and behavioral sciences as they relate to several different kinds of environmental problems      **A Primer on Environmental Decision-Making** Knut Lehre Seip,Fred Wenstop,2006-10-12 This book integrates decision making and environmental science For ecologists it will bridge the gap to economics For practitioners in environmental economics and management it will be a major reference book It probably contains the largest collection available of expressions and basic equations that are used in environmental sciences The book is organized in disciplines but it also includes 13 applications that draw on all subjects in the book and where cross references are extensively used The applications show how a range of topics in economics social sciences and ecology are interrelated when decisions have to be made      **Environmental Decision-Making in Context** Chad J. McGuire,2017-09-25 Because of the complexity involved in understanding the environment the choices made about environmental issues are often incomplete In a perfect world those who make environmental decisions would be armed with a foundation about the broad range of issues at stake when making such decisions Offering a simple but comprehensive understanding of the critical roles science economics and values play in making informed environmental decisions Environmental Decision Making in Context A Toolbox provides that foundation The author highlights a primary set of intellectual tools from different disciplines and places them into an environmental context through the use of case study examples The case studies are designed to stimulate the analytical reasoning required to employ environmental decision making and ultimately help in establishing a framework for pursuing and solving environmental questions issues and problems They create a framework individuals from various backgrounds can use to both identify and analyze environmental issues in the context of everyday environmental problems The book strikes a balance between being a tightly bound academic text and a loosely defined set of principles It takes you beyond the traditional pillars of academic discipline to supply an understanding of the fundamental aspects of what is actually involved in making environmental decisions and building a set of skills for making those decisions      **Science in Environmental Decision-making** Dagmar Lohan,2003      Decision Making for the Environment National Research Council,Division of Behavioral and Social Sciences and Education,Center for Economic, Governance, and International

Studies, Committee on the Human Dimensions of Global Change, Panel on Social and Behavioral Science Research Priorities for Environmental Decision Making, 2005-05-31 With the growing number complexity and importance of environmental problems come demands to include a full range of intellectual disciplines and scholarly traditions to help define and eventually manage such problems more effectively Decision Making for the Environment Social and Behavioral Science Research Priorities is the result of a 2 year effort by 12 social and behavioral scientists scholars and practitioners The report sets research priorities for the social and behavioral sciences as they relate to several different kinds of environmental problems

*Risk in the Modern Age* NA NA, 2019-06-12 Environmental decision making in recent decades has become increasingly dependent on scientific expertise Grounded in universal principles of knowledge these expert evaluations often depart from the assessments of ordinary members of the public Whether the issue is nuclear power genetic testing food safety or biodiversity conservation lay people are increasingly charging experts with being ignorant of local contextual considerations Scientists as well as many policy makers in turn contend that the public is hopelessly irrational in gauging environmental risks A growing group of social theorists has begun to take a keen interest in these disputes because risk captures central themes of late modernity Increasing individualization emerging new social movements and declining public trust in key institutions are notions that loom large in these debates Highlighting both theoretical and empirical perspectives this volume brings together a distinguished group of environmental sociologists who critique and extend current thinking on what it means to live in a risk society

**Environmental Decision-making** Joseph Duane Vander Pluym, 1988

Uncertainty and Environmental Decision Making Jerzy A. Filar, Alain Haurie, 2010-05-03 The 21st century promises to be an era dominated by international response to certain global environmental challenges such as climate change depleting biodiversity and biocapacity as well as general atmospheric water and soil pollution problems Consequently Environmental decision making EDM is a socially important field of development for Operations Research and Management Science OR MS certainty is an important feature of these decision problems and it intervenes at very different time and space scales The Handbook on Uncertainty and Environmental Decision Making provides a guided tour of selected methods and tools that OR MS offer to deal with these issues Below we briefly introduce peer reviewed chapters of this handbook and the topics that are treated by the invited authors The first chapter is a general introduction to the challenges of environmental decision making the use of OR MS techniques and a range of tools that are used to deal with uncertainty in this domain

*Public Participation in Environmental Assessment and Decision Making* National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, Panel on Public Participation in Environmental Assessment and Decision Making, 2008-12-07 Federal agencies have taken steps to include the public in a wide range of environmental decisions Although some form of public participation is often required by law agencies usually have broad discretion about the extent of that involvement Approaches vary widely from holding public information gathering

meetings to forming advisory groups to actively including citizens in making and implementing decisions Proponents of public participation argue that those who must live with the outcome of an environmental decision should have some influence on it Critics maintain that public participation slows decision making and can lower its quality by including people unfamiliar with the science involved This book concludes that when done correctly public participation improves the quality of federal agencies decisions about the environment Well managed public involvement also increases the legitimacy of decisions in the eyes of those affected by them which makes it more likely that the decisions will be implemented effectively This book recommends that agencies recognize public participation as valuable to their objectives not just as a formality required by the law It details principles and approaches agencies can use to successfully involve the public

**Fuzzy Decision Analysis: Multi Attribute Decision Making Approach** Farhad Hosseinzadeh Lotfi, Tofiq Allahviranloo, Witold Pedrycz, Mohammadreza Shahriari, Hamid Sharafi, Somayeh Razipour Ghaleh Jough, 2023-11-24 Authored by a leading expert in the field this book introduces an innovative methodology that harnesses the power of fuzzy logic to enhance decision making in multi attribute scenarios In a world of complexity and uncertainty effective decision making is paramount Springer proudly presents a cutting edge publication that revolutionizes decision analysis Fuzzy Decision Analysis Multi attribute Decision Making Approach This book stands at the forefront of decision analysis introducing the integration of fuzzy logic into multi attribute decision making It is a transformative journey into the realm of advanced decision analysis It book not only equips you with the knowledge to comprehend the theoretical underpinnings but also empowers you to apply these insights in practical scenarios This book serves as your indispensable companion Its comprehensive coverage serves as a beacon guiding you through the intricate maze of fuzzy logic and multi attribute decision making ultimately empowering you to embrace innovation and master the art of making well informed decisions in an ever changing world

**Tools to Aid Environmental Decision Making** Virginia H. Dale, Mary R. English, 2012-11-26 Environmental decision making is like politics mostly local In fact making decisions about the environment at the subnational level in state regional and local jurisdictions is a lot like politics For resolving environmental issues demands but often resists a balance between deeply held feelings and stark confrontations among opposing views This volume describes tools that should make the decision maker's lot a bit more tolerable The authors would be the last to suggest that these decision aiding tools will somehow bring a benign order to issues that reach to people's fundamental values What they can help do is to keep the debate focused on the important issues to serve up useful options and to narrow the range of disagreement Even this is a challenging assignment Still why bother The chief reason is that the locus of environmental decision making has in the past decade or so shifted from the national to the subnational level a convenient if colorless term to denote the hurly burly of environmental controversy outside the Washington Beltway For example New England has taken a regional stand on tropospheric ozone control and California requires automotive pollution controls that some other jurisdictions have partially adopted This shift is a profound

but not unexpected result of the way environmental policy has evolved since the modern environmental movement began around the late 1960s Back then the pendulum was swinging the other way Multicriteria Analysis for Environmental Decision-Making Davide Geneletti,2019-05-30 Multicriteria analysis or MCA has been increasingly used in environmental decision making to support the identification of suitable courses of action by integrating factual information with value based information collected through stakeholder engagement Multicriteria Analysis for Environmental Decision Making provides an introduction to the key concepts of MCA and includes a series of case studies that illustrate the application of MCA to a variety of environmental decision making problems ranging from protected area zoning to landfill siting and from forest restoration to environmental impact assessment of tourism infrastructures A compact reference that can be used by researchers practitioners and planners decision makers Multicriteria Analysis for Environmental Decision Making can also serve as a textbook for undergraduate and postgraduate courses in a broad range of curricula Valuing Health Risks, Costs, and Benefits for Environmental Decision Making National Research Council,Division of Behavioral and Social Sciences and Education,Commission on Behavioral and Social Sciences and Education,Mathematics and Resources,Commission on Physical Sciences, Mathematics and Resources,1990-02-01 Sound Science, Junk Policy Michele Morrone,Timothy W. Lohner,2002-06-30 Morrone and Lohner assert that sound science is often misinterpreted which leads to questionable policy decisions This provocative look at environmental policymaking shows the importance of correctly interpreting science and examines the full implications of using science as the major criterion in the decision making process Contemporary critics often argue that environmental policy problems are rooted in junk science Yet Morrone and Lohner assert that many cases are based on sound science that is misinterpreted which leads to questionable policy decisions Revealing the way science is used in the environmental decision making process the authors illustrate how policies can go awry Their combined experience in the public and private sectors is buttressed by a series of case studies including Air pollution Solid and hazardous waste management Food protection Vectors and their diseases Drinking water safety This provocative look at environmental policymaking shows the importance of correctly interpreting science and examines the full implications of using science as the major criterion in the decision making process The Moral Austerity of Environmental Decision Making John Martin Gillroy,Joe Bowersox,2002-06-17 A roundtable discussion on the missing ethical dimension in environmental policy **The Analytic Hierarchy Process in Natural Resource and Environmental Decision Making** Daniel L. Schmoldt,2001-06-30 Decision making in land management involves preferential selection among competing alternatives Often such choices are difficult owing to the complexity of the decision context Because the analytic hierarchy process AHP developed by Thomas Saaty in the 1970s has been successfully applied to many complex planning resource allocation and priority setting problems in business energy health marketing natural resources and transportation more applications of the AHP in natural resources and environmental sciences are appearing regularly This realization has

prompted the authors to collect some of the important works in this area and present them as a single volume for managers and scholars Because land management contains a somewhat unique set of features not found in other AHP application areas such as site specific decisions group participation and collaboration and incomplete scientific knowledge this text fills a void in the literature on management science and decision analysis for forest resources **Environmental Decision Making** James Lein,1997-06-04 Individuals faced with making decisions about the environment have an ever increasing amount of data at their disposal Developments in information technology IT are also providing environmental managers with a vast array of IT based decision support systems This book examines the principles of decision support expert systems and neural networks and explores their application in environmental planning analysis and resource management Practitioners in the environmental sector and students of environmental management will find it an invaluable resource **Forecasts And Environmental Decision Making** Paul J. Culhane,2019-03-05 This book evaluates the predictive accuracy of the forecasts in a sample of federal environmental impact statements It examines a major federal attempt to impose rationalistic reforms on government decision makers and the first view of National Environmental Policy Act reforms **Environmental Decision-Making in Context** Chad J. McGuire,2012-04-25 Because of the complexity involved in understanding the environment the choices made about environmental issues are often incomplete In a perfect world those who make environmental decisions would be armed with a foundation about the broad range of issues at stake when making such decisions Offering a simple but comprehensive understanding of the critical roles science economics and values play in making informed environmental decisions Environmental Decision Making in Context A Toolbox provides that foundation The author highlights a primary set of intellectual tools from different disciplines and places them into an environmental context through the use of case study examples The case studies are designed to stimulate the analytical reasoning required to employ environmental decision making and ultimately help in establishing a framework for pursuing and solving environmental questions issues and problems They create a framework individuals from various backgrounds can use to both identify and analyze environmental issues in the context of everyday environmental problems The book strikes a balance between being a tightly bound academic text and a loosely defined set of principles It takes you beyond the traditional pillars of academic discipline to supply an understanding of the fundamental aspects of what is actually involved in making environmental decisions and building a set of skills for making those decisions
