Science And Other Cultures Diversity In The Philosophy Of Science And Technology:

Science and Other Cultures Robert Figueroa, Sandra G. Harding, 2003 First Published in 2003 Routledge is an imprint of Taylor Francis an informa company Science and Other Cultures Sandra Harding, Robert Figueroa, 2013-10-31 In this pioneering new book Sandra Harding and Robert Figueroa bring together an important collection of original essays by leading philosophers exploring an extensive range of diversity issues for the philosophy of science and technology The essays gathered in this volume extend current philosophical discussion of science and technology beyond the standard feminist and gender analyses that have flourished over the past two decades by bringing a thorough and truly diverse set of cultural racial and ethical concerns to bear on questioning in these areas Science and Other Cultures charts important new directions in ongoing discussions of science and technology and makes a significant contribution to both scholarly and teaching resources available in the field *Reconsideration of Science and Technology II* Liu Dachun, Ai Zhiqiang, Yang Huili, 2022-09-30 In reviewing and reconsidering the intellectual history of scientism and antiscientism the authors assess the process of reasoning and prejudices of these contrasting viewpoints while discussing the repercussions of scientific hegemony and its contemporary criticism As the second volume of a three volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever changing world this title focuses on ideological trends centering around scientism and anti scientism since the 19th century The six chapters look into the emergence of scientism instrumental reason scientific optimism scientific pessimism scientific crisis and irrationalism and finally the deconstruction of scientism The authors provide insight into the connections and biases of these disparate views and critiques explore the influences of the hegemony of science and contemporary critique of science and evaluate the value of postmodernism and deconstructivism The volume will appeal to scholars and students interested in the philosophy of science and technology the ideology of scientism and anti scientism modernism and postmodernism Marxist philosophy and topics related to scientific culture *Metaphor Translation in Popular Science* Sui He, 2024-12-30 This book explores the intersection of metaphor studies and translation studies specifically focusing on popular scientific articles The volume complements existing work on conceptual metaphor theory in translation by aligning it with conceptual blending theory to demonstrate how an integrated approach offers a more expansive understanding of the cognitive and linguistic dimensions of metaphor translation It includes an essential introduction to the key concepts and theories in metaphor studies and metaphor translation research discerning the importance of localising theories from neighbouring disciplines such as metaphor studies for advancing interdisciplinary research in translation studies Sui He applies this approach to popular cosmological discourse analysing examples from articles in Scientific American and their Chinese translations allowing for a nuanced examination of translation strategies adopted by translators at both cognitive and linguistic levels which presents the circulation and transformation of popular cosmological knowledge from English in two Chinese mediated communities This book will be of

interest to students and scholars in translation studies metaphor studies and discourse analysis

Knowledge, Power and Dissent Guy R. Neave, 2006-01-01 This publication is based on the discussions of the 2004 Global Colloquium on Research and Higher Education Policy of the UNESCO Forum for Higher Education Research and Knowledge held in Paris in December 2004 It contains contributions from 17 international experts in the field of higher education which explore the global rise of the knowledge society and its implications for higher education and for sustainable human development in the future

The Fight Against Doubt Inmaculada de Melo-Martín, Kristen Intemann, 2018-07-02 The lack of public support for climate change policies and refusals to vaccinate children are just two alarming illustrations of the impacts of dissent about scientific claims Dissent can lead to confusion false beliefs and widespread public doubt about highly justified scientific evidence Even more dangerously it has begun to corrode the very authority of scientific consensus and knowledge Deployed aggressively and to political ends some dissent can intimidate scientists stymie research and lead both the public and policymakers to oppose important public policies firmly rooted in science To criticize dissent is however a fraught exercise Skepticism and fearless debate are key to the scientific process making it both vital and incredibly difficult to characterize and identify dissent that is problematic in its approach and consequences Indeed as de Melo Martín and Intemann show the criteria commonly proposed as means of identifying inappropriate dissent are flawed and the strategies generally recommended to tackle such dissent are not only ineffective but could even make the situation worse The Fight Against Doubt proposes that progress on this front can best be achieved by enhancing the trustworthiness of the scientific community and by being more realistic about the limits of science when it comes to policymaking It shows that a richer understanding of the context in which science operates is needed to disarm problematic dissent and those who deploy it This the authors argue is the best way forward rather than diagnosing the many instances of wrong headed dissent

Objectivity & Diversity Sandra Harding, 2015-05-18 Worries about scientific objectivity seem never ending Social critics and philosophers of science have argued that invocations of objectivity are often little more than attempts to boost the status of a claim while calls for value neutrality may be used to suppress otherwise valid dissenting positions Objectivity is used sometimes to advance democratic agendas at other times to block them sometimes for increasing the growth of knowledge at others to resist it Sandra Harding is not ready to throw out objectivity quite yet For all of its problems she contends that objectivity is too powerful a concept simply to abandon In *Objectivity and Diversity* Harding calls for a science that is both more epistemically adequate and socially just a science that would ask How are the lives of the most economically and politically vulnerable groups affected by a particular piece of research Do they have a say in whether and how the research is done Should empirically reliable systems of indigenous knowledge count as real science Ultimately Harding argues for a shift from the ideal of a neutral disinterested science to one that prizes fairness and responsibility

Experimental Practice Dimitris Papadopoulos, 2018-07-16 In *Experimental Practice* Dimitris Papadopoulos explores the potential for building new

forms of political and social movements through the reconfiguration of the material conditions of existence Rather than targeting existing institutions in demands for social justice Papadopoulos calls for the creation of alternative ontologies of everyday life that would transform the meanings of politics and justice Inextricably linked to technoscience these alterontologies which Papadopoulos examines in a variety of contexts from AIDS activism and the financialization of life to hacker communities and neuroscience form the basis of ways of life that would embrace the more than social interdependence of the human and nonhuman worlds Speaking to a matrix of concerns about politics and justice social movements matter and ontology everyday practice technoscience the production of knowledge and the human and nonhuman Papadopoulos suggests that the development of alterontologies would create more efficacious political and social organizing

The Diversity of Hunter Gatherer Pasts Bill Finlayson, Graeme Warren, 2017-06-30 This thought provoking collection of new research papers explores the extent of variation amongst hunting and gathering peoples past and present and the considerable analytical challenges presented by this diversity This problem is especially important in archaeology where increasing empirical evidence illustrates ways of life that are not easily encompassed within the range of variation recognized in the contemporary world of surviving hunter gatherers Put simply how do past hunter gatherers fit into our understandings of hunter gatherers Furthermore given the inevitable archaeological reliance on analogy it is important to ask whether conceptions of hunter gatherers based on contemporary societies restrict our comprehension of past diversity and of how this changes over the long term Discussion of hunter gatherers shows them to be varied and flexible but modeling of contemporary hunter gatherers has not only reduced them into essential categories but has also portrayed them as static and without history It is often said that the study of hunter gatherers can provide insight into past forms of social organization and behavior unfortunately too often it has limited our understandings of these societies In contrast contributors here explore past hunter gather diversity over time and space to provide critical perspectives on general models of hunter gatherers and attempt to provide new perspectives on hunter gatherer societies from the greater diversity present in the past

information manipulation and restriction in contemporary society It explores whether and when manipulation of the conditions of inquiry without the consent of those manipulated is morally or epistemically justified The contributors provide a wealth of examples of manipulation and debate whether epistemic paternalism is distinct from other forms of paternalism debated in political theory Special attention is given to medical practice for science communication and for research in science technology and society Some of the contributors argue that unconsenting interference with people's ability of inquiry is consistent with and others that it is inconsistent with efforts to democratize knowledge and decision making These differences invite theoretical reflection regarding which goods are fundamental whether there is a clear or only a moving boundary between informing and instructing and whether manipulation of people's epistemic conditions amounts to a type of intellectual injustice The collection pays special attention to contemporary paternalistic practices in big data and scientific research as the way in which the flow of information or knowledge might be curtailed by the manipulations of a small body of experts or algorithms
