Science And Power The Historical Foundations Of Research Policies In Europe:

Science and Power Luca Guzzetti, 2000 **Science Policies and Twentieth-Century Dictatorships** Amparo

Gómez, Antonio Fco. Canales, Brian Balmer, 2016-03-03 Making a fresh contribution to the political history of science this book explores the connections between the science policies of three countries that each experienced considerable political upheaval in the twentieth century Spain Italy and Argentina By focussing on these three countries the contributors are able to present case studies that highlight the characteristics and specificities of the democratic and dictatorial political processes involved in the production of science and technology The focus on dictatorship presents the opportunity to expand our knowledge beyond the more extensive literature about science in Nazi Germany and Stalinist USSR about the level of political involvement of scientists in non democratic contexts and to what extent they act as politicians in different contexts Key topics covered include the new forms of organization and institutionalization of science in the twentieth century the involvement of scientific communities in the governance of science and its institutions the role of ideology in scientific development the scientific practices adopted by scientific communities in different contexts and the characteristics of science and technology produced in these contexts

European Union Research Policy Veera Mitzner, 2020-06-01 This book describes the emergence of research policy as a key competence of the European Union EU It shows how the European Community EC the predecessor of the EU which initially had very limited legal competence in the field progressively developed a solid policy framework presenting science and research as indispensable tools for European economic competitiveness and growth In the late 20th century Western Europe hungry for growth concerned about the American technological lead and keen to compete in the increasingly open international markets the argument for a joint European effort in science and technology seemed plausible However the EC was building its new functions in an already crowded field of European research collaboration and in a shifting political context marked by austerity national rivalries new societal and environmental challenges and emerging ambivalence about science This book conveys the contested history of one of the EU's most successful policies It is a story of struggle and frustration but also of a great institutional and intellectual continuity The ideational edifice for the EC EU research policy that was put in place during the 1960s and 1970s years proved remarkably robust Its durability enabled the rapid takeoff of the European Commission's initiatives in the more favorable political atmosphere of the early 1980s and the subsequent expansion of the EU research funding instruments and programs that permanently transformed the European research landscape

Discourses and Counter-discourses on Europe

Manuela Ceretta, Barbara Curli, 2017-01-12 The European Union plays an increasingly central role in global relations from migration to trade to institutional financial solvency The formation and continuation of these relations their narratives and discourses are rooted in social political and economic historical relations emerging at the founding of European states and then substantially augmented in the Post WWII era Any rethinking of our European narratives requires a contextualized

analysis of the formation of hegemonic discourses The book contributes to the ongoing process of rethinking the European project identity and institutions brought about by the end of the Cold war and the current economic and political crisis Starting from the principle that the present European crisis goes hand in hand with the crisis of its hegemonic discourse the aim of the volume is to rescue the complexity the richness the ambiguity of the discourses on Europe as opposed to the present simplification The multidisciplinary approach and the long term perspective permits illuminating scope over multiple discourses historical periods and different languages including that of the European institutions This text will be of key interest to scholars and students of European Union politics European integration European History and more broadly international relations

Science, Culture, and Modern State Formation Patrick Carroll, 2006-10-02 This highly original groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England Patrick Carroll develops the concept of engine science to capture the centrality of engineering practices and technologies in the emerging mechanical philosophy He traces the introduction of engine science into colonial Ireland showing how that country subsequently became a laboratory for experiments in statecraft Carroll's wide ranging study spanning institutions political philosophy and policy implementation demonstrates that a number of new technological developments from cartography statistics and natural history to geology public health and sanitary engineering reveal how modern science came to engineer land people and the built environment into a material political state in an unprecedented way creating the modern state Shedding new light on sociology the history of science and technology and on the history of British colonial projects in Ireland from the seventeenth to the nineteenth centuries his study has implications for understanding postcolonial occupations and nation building ventures today and on contemporary dilemmas such as the role of science and government in environmental sustainability This highly original groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England

The Evolution of Knowledge Jürgen Renn, 2022-05-03 A fundamentally new approach to the history of science and technology This book presents a new way of thinking about the history of science and technology one that offers a grand narrative of human history in which knowledge serves as a critical factor of cultural evolution Jürgen Renn examines the role of knowledge in global transformations going back to the dawn of civilization while providing vital perspectives on the complex challenges confronting us today in the Anthropocene this new geological epoch shaped by humankind Renn reframes the history of science and technology within a much broader history of knowledge analyzing key episodes such as the evolution of writing the emergence of science in the ancient world the Scientific Revolution of early modernity the globalization of knowledge industrialization and the profound transformations wrought by modern science He investigates the evolution of knowledge using an array of disciplines and methods from cognitive science

and experimental psychology to earth science and evolutionary biology The result is an entirely new framework for understanding structural changes in systems of knowledge and a bold new approach to the history and philosophy of science Written by one of today's preeminent historians of science The Evolution of Knowledge features discussions of historiographical themes a glossary of key terms and practical insights on global issues ranging from climate change to digital capitalism This incisive book also serves as an invaluable introduction to the history of knowledge *Science and Power* European Commission, 2000 Italy in the International System from Détente to the End of the Cold War Antonio Varsori, Benedetto Zaccaria, 2017-11-10 This edited collection offers a new approach to the study of Italy's foreign policy from the 1960s to the end of the Cold War highlighting its complex and sometimes ambiguous goals due to the intricacies of its internal system and delicate position in the fault line of the East West and North South divides According to received opinion during the Cold War era Italy was more an object rather than a factor in active foreign policy limiting itself to paying lip service to the Western alliance and the European integration process without any pretension to exerting a substantial international influence Eleven contributions by leading Italian historians reappraise Italy's international role addressing three complex and intertwined issues namely the country's political diplomatic dimension the economic factors affecting Rome's international stance and Italy's role in new approaches to the international system and the influence of political parties cultures in the nation's foreign policy Ontologies for Developing Things Casper Bruun Jensen, 2010-01-01 *Ontologies for Developing Things* is a work of unflagging intelligence and intellectual energy spilling over with new ideas surprising angles sharp perceptions and interesting juxtapositions and written with correspondingly attractive punch and force Readers interested in information technologies contemporary developments in social studies of science and related cultural and political theory will find the book immensely engaging and endlessly useful Barbara Herrnstein Smith Duke University and Brown University author of *Scandalous Knowledge Science Truth and the Human* and *or Natural Reflections Human Cognition at the Nexus of Science and Religion* **Science in the Age of Baroque** Ofer Gal, Raz Chen-Morris, 2012-11-28 This volume examines the New Science of the 17th century in the context of Baroque culture analysing its emergence as an integral part of the high culture of the period The collected essays explore themes common to the new practices of knowledge production and the rapidly changing culture surrounding them as well as the obsessions anxieties and aspirations they share such as the foundations of order the power and peril of mediation and the conflation of the natural and the artificial The essays also take on the historiographical issues involved the characterization of culture in general and culture of knowledge in particular the use of generalizations like Baroque and the status of such categories and the role of these in untangling the historical complexities of the tumultuous 17th century The canonical protagonists of the Scientific Revolution are considered and so are some obscure and suppressed figures Galileo side by side with Scheiner Torricelli together with Kircher Newton as well as Scilla The coupling of Baroque and Science defies both the still

triumphalist historiographies of the Scientific Revolution and the slight embarrassment that the Baroque represents for most cultural national histories of Western Europe It signals a methodological interest in tensions and dilemmas rather than self affirming narratives of success and failure and provides an opportunity for reflective critique of our historical categories which is valuable in its own right Zero Degrees Charles W. J. Withers, 2017-03-13 Charles Withers explains how the choice of Greenwich to mark 0 longitude solved problems of global measurement that had engaged geographers astronomers and mariners since ancient times This history is a testament to the power of maps the challenges of global measurement and the role of scientific authority in creating the modern world *Multiple Nature-Cultures, Diverse Anthropologies* Casper Bruun Jensen, Atsuro Morita, 2019-08-16 Over time the role of nature in anthropology has evolved from being a mere backdrop for social and cultural diversity to being viewed as an integral part of the ontological entanglement of human and nonhuman agents This transformation of the role of nature offers important insight into the relationships between diverse anthropological traditions By highlighting natural cultural worlds alongside these traditions *Multiple Nature Cultures Diverse Anthropologies* explores the potential for creating more sophisticated conjunctions of anthropological knowledge and practice **Geography, Technology and Instruments of Exploration** Fraser MacDonald, Charles W.J. Withers, 2016-04-22 Focusing on aspects of the functioning of technology and by looking at instruments and at instrumental performance this book addresses the epistemological questions arising from examining the technological bases to geographical exploration and knowledge claims Questions of geography and exploration and technology are addressed in historical and contemporary context and in different geographical locations and intellectual cultures The collection brings together scholars in the history of geographical exploration historians of science historians of technology and importantly experts with curatorial responsibilities for and museological expertise in major instrument collections Ranging in their focus from studies of astronomical practice to seismography meteorological instruments and rockets from radar to the hand held barometer the chapters of this book examine the ways in which instruments and questions of technology too often overlooked hitherto offer insight into the connections between geography and exploration **Sound and Safe** Karin Bijsterveld, Eefje Cleophas, Stefan Krebs, Gijs Mom, 2014 This book traces the full history of noise in and around cars shows how we created auditory privacy in our cars even though they were highly noisy things at the beginning of the twentieth century It is about the sounds of car engines tires wipers blinkers warning signals in car audio systems and ultimately about how we became used to listen while driving Making a Grade James Elwick, 2021-03-18 Making a Grade takes historiographic and sociological perspectives developed to understand large scale scientific and technical systems and uses them to highlight the standardization that went into standardized testing **Baroque Garden Cultures** Michel Conan, 2005 Baroque Garden Cultures proposes a new approach to the study of baroque gardens examining the social reception of gardens as a means to understand garden culture in general and exploring baroque gardens as a feature of baroque cultures in particular

Networked Governance and Transatlantic Relations Gabriella Paar-Jakli, 2014-04-29 In today's complex and interconnected world scholars of international relations seek to better understand challenges spurred by intensified global communication and interaction. The complex connectedness of modern society and politics compels us to investigate the pattern of interconnections among actors who inhabit social and political spaces. Gabriella Paar-Jakli's study aims to advance theory and practice by examining the networks used by specialists in North America and Europe to achieve their policy goals in the area of science and technology. Her book suggests that to overcome policy problems transnationally three critical factors should be considered. First, as science and technology policy becomes increasingly critical to resolving global issues, it should be regarded as an integral element of the foreign policy process. Second, as liberal international relations theory argues, the increasing role of NGOs must be taken seriously alongside states as vital agents of policy reform. Third, as transatlantic relations remain central to maintaining the global order, they must be reconsidered. Paar-Jakli assesses the role of digital networks as facilitators of regional cooperation. Utilizing various techniques of social network analysis, her research indicates an active and structurally discernible network in cyberspace among transatlantic organizations and demonstrates the role of virtual networks as facilitators of cooperative arrangements in transatlantic relations. Paar-Jakli's original research uses social network analysis to investigate transatlantic cooperation, a new approach that will be noteworthy to network and transatlantic scholars as well as policymakers. *Research Report* Max-Planck-Institut für Wissenschaftsgeschichte, 1998
