Science And Religion In The Thought Of Nicolas Malebranche:

Hobart, 1982 Hobart demonstrates how Malebranche's theories of truth ideas and intelligible extension were formulated under the influence of mathematics and how these theories conflicted with the assumptions and patterns of thought needed for traditional substance philosophy and natural theology The conflict produced inconsistencies in key concepts necessity infinity being faith and reason rendering any reconciliation between science and religion intellectually unattainable Originally published in 1982 A UNC Press Enduring Edition UNC Press Enduring Editions use the latest in digital technology to make available again books from our distinguished backlist that were previously out of print These editions are published unaltered from the original and are presented in affordable paperback formats bringing readers both historical and cultural value

The Newton Wars & the Beginning of the French Enlightenment J.B. Shank,2024-05-31 Nothing is considered more natural than the connection between Isaac Newton s science and the modernity that came into being during the eighteenth century Enlightenment Terms like Newtonianism are routinely taken as synonyms for Enlightenment and modern thought yet the particular conjunction of these terms has a history full of accidents and contingencies Modern physics for example was not the determined result of the rational unfolding of Newton s scientific work in the eighteenth century nor was the Enlightenment the natural and inevitable consequence of Newton s eighteenth century reception Each of these outcomes in fact was a contingent event produced by the particular historical developments of the early eighteenth century A comprehensive study of public culture *The Newton Wars and the Beginning of the French Enlightenment* digs below the surface of the commonplace narratives that link Newton with Enlightenment thought to examine the actual historical changes that brought them together in eighteenth century time and space Drawing on the full range of early modern scientific sources from studied scientific treatises and academic papers to book reviews commentaries and private correspondence J B Shank challenges the widely accepted claim that Isaac Newton s solitary genius is the reason for his iconic status as the father of modern physics and the philosophemovement

personal romance of history James Albert Richards, 1924 **The Ovary of Eve** Clara Pinto-Correia, 2007-12-01 The Ovary of Eve is a rich and often hilarious account of seventeenth and eighteenth century efforts to understand conception In these early years of the Scientific Revolution the most intelligent men and women of the day struggled to come to terms with the origins of new life and one theory preformation sparked an intensely heated debate that continued for over a hundred years Clara Pinto Correia traces the history of this much maligned theory through the cultural capitals of Europe The most wonderfully eye opening or imagination opening book as amusing as it is instructive Mary Warnock London Observer A fascinating and often humorous study of a reproductive theory that flourished from the mid 17th century to the mid 18th century Nina C Ayoub Chronicle of Higher Education More than just a good story The Ovary of Eve is an object lesson about the history of science Don't trust it Pinto Correia says she wants to tell the story of history's losers In doing so she makes defeat sound more appealing than victory Emily Eakin Nation A sparkling history of preformation as it once affected every facet of European culture Robert Taylor Boston Globe **Information Ages** Michael E. Hobart, Zachary S. Schiffman, 2000-05-26 A grand intellectual history from clay tablets to Bill Gates Selected by Choice Magazine as an Outstanding Academic Title The late twentieth century is trumpeted as the Information Age by pundits and politicians alike and on the face of it the claim requires no justification But in Information Ages Michael E Hobart and Zachary S Schiffman challenge this widespread assumption In a sweeping and captivating history of information technology from the ancient Sumerians to the world of Alan Turing and John von Neumann the authors show how revolutions in the technology of information storage from the invention of writing approximately 5 000 years ago to the mathematical models for describing physical reality in the seventeenth and eighteenth centuries to the introduction of computers profoundly transformed ways of thinking Isis Cumulative Bibliography 1976-1985: Subjects, periods and civilizations John Neu, 1990 The New Map of the World Giuseppe Mazzotta, 2014-07-14 For today's readers the great Italian philosopher of history Giambattista Vico 1668-1744 can be startlingly relevant to the social and educational divisiveness we confront at century's end here Giuseppe Mazzotta one of the leading Italianists in the United States shows how much Vico properly read can bring to an understanding of contemporary social problems To explore Vico's body of thought in all its monumental complexity Mazzotta highlights the place of poetry or writerliness in Vico's educational project which links literature history religion philosophy and politics The New Map of the World is the first book since Benedetto Croce's The Philosophy of G B Vico 1911 to interpret the immense range of Vico's creativity Beginning with Vico's autobiography Mazzotta explains that Vico's heroic attempt to unite the arts and sciences was meant to offer a desperately needed political unity to modern society In contrast to past thematic studies of Vico that focus on a single one of his ideas The New Map of the World explores the vital interaction of the issues that fascinated him his educational and political project his sense of the necessity for a new way of conceiving authority and his belief in the power of poetry Mazzotta ends by examining Vico's awareness of the tragic limits of politics
