document and track the progress of Site cleanup Hanford Environmental Information System HEIS Hanford Well Information Data System HWIS the Waste Information Data System WIDS and the Hanford Geographic Information System HGIS HEIS contains the date time location and results from samples taken during activities such as field investigations and groundwater monitoring HWIS contains the details of the wells and boreholes on the Site WIDS tracks the waste sites from discovery through cleanup Each of the databases is supported by several applications for entering or retrieving information HGIS keeps track of the locations for waste WIDS sites wells and boreholes and other sampling site locations Of the applications used to extract data from the Environmental Databases the Hanford Map Portal QMAP is the newest and perhaps the most efficient QMAP combines the HGIS spatial information with the information from the other databases so that users may browse to or query the waste site or well of interest A query of a waste site or well engages QMAP to find the object and then the user may access the appropriate database This paper describes the Environmental Databases and their maintenance as well as the applications used to access them Collectively these databases are a critical element in formally documenting the work and associated decisions made during the cleanup of Hanford
