## **Science Ethics Sustainability The Responsibility Of Science In Attaining:**

Science, Ethics, Sustainability Anders Nordgren, 1997      *Nature, Value, Duty* Christopher J. Preston, Wayne Ouderkirk, 2006-11-17 Gifford Lecturer and Templeton Prize winner Holmes Rolston III is widely known as the father of environmental ethics His writings range between natural philosophy and theology and include detailed presentations of an interlocking position that includes aesthetics value theory natural resource policy wilderness advocacy and sustainable development *Nature Value and Duty Life on Earth* with Holmes Rolston III is a collection of contemporary writings on the work of Holmes Rolston III The authors contributing to this volume are a mixture of senior scholars in environmental ethics and new voices in philosophy and in literature Together they provide an in depth evaluation of many of the topics discussed by Rolston They probe the strengths and weaknesses of his work and suggest valuable correctives Rolston himself in a detailed reply to each of his critics at the end of the volume reveals where some of these criticisms sting him the most and in the process provides one of the most detailed and articulate defenses of his position ever offered      **For Our Children** Anders Nordgren, 2010-01-01 This book provides an overview of different ethical views on animal experimentation Special attention is given to the production and experimental use of genetically modified animals It proposes a middle course between those positions that are very critical and those very positive This middle course implies that animal experiments originating in vital human research interests are commonly justified provided that animal welfare is taken seriously Some animal experiments are not acceptable since the expected human benefit is too low and the animal suffering too severe This position is supported by an argument from species care according to which we have special obligations to our children and other humans due to special relations The book tries to bridge the gap between animal ethics and animal welfare science by discussing various conceptions of animal welfare function centered feeling based and those focusing on natural living The theoretical starting point is imaginative casuistry This approach stresses the role of moral imagination and metaphor in ethical deliberation accepts a plurality of values and recognizes the importance of case by case balancing In the discussion of genetically modified animals both intrinsic ethical concerns and animal welfare concerns are addressed      Fisheries and Sustainability Emma Victoria Witbooi, 2011-11-11 Employing an inter disciplinary and contextual approach this book is a legal study which reflects political and ecological realities and their inter relation in the context of sustainable marine fisheries focusing on specific EU West African bilateral fisheries relations      Transboundary Risk Management Joanne Linnerooth-Bayer, Gunnar Sjostedt, 2010-09-23 Environmental hazards do not respect international boundaries In this volume distinguished international researchers make a significant contribution to the understanding and management of transboundary environmental risks The transboundary risk topics addressed highlight the key political economic social and cultural issues of our times such as how transboundary risks are constructed how they are communicated within and between countries how the authorities can build trust in political management processes and what forms of democratic risk

management institutions are appropriate Useful practical lessons on the management of transboundary risk at the national and international levels are drawn from the case studies The volume provides valuable evidence and analysis for those working on international environmental issues and all aspects of risk management
