

Philonaut Can people investigate invisible things?

Child F Yes, we can study very small microbes that are in fact invisible?

Child G Actually, that's not true, if we look at microbes, we see them through a big microscope and then we can see them.

Philonaut Is what you see under a microscope real?

Child F What you see is real, but perhaps it is also not real, because it is much larger than you know it is.

Child H I think you can study invisible things; you can't see the things in the air, yet you can still study them.

Child I You can't see gases in the air, but you can find traces of them in a machine.

Child G But if you only see traces, then you can't be really sure that what you see is real. If I see tracks of an animal, I can still make a mistake. Tracks that look like tracks of a bear are not necessarily tracks of a bear.

(...)

Philonaut Can you study time?

Child J Time is so strange. When I say 'now' it is already gone. Yesterday is gone and tomorrow is not yet born. The only thing that exists is now and it is already gone. So, how can we ever study the 'now'?

Affective Dialogue Systems Elisabeth André, Laila Dybkjaer, Wolfgang Minker, Paul Heisterkamp, 2004-05-14

Human conversational partners are able at least to a certain extent to detect the speaker's or listener's emotional state and may attempt to respond to it accordingly. When instead one of the interlocutors is a computer a number of questions arise such as the following: To what extent are dialogue systems able to simulate such behaviors? Can we learn the mechanisms of emotional behaviors from observing and analyzing the behavior of human speakers? How can emotions be automatically recognized from a user's mimics, gestures and speech? What possibilities does a dialogue system have to express emotions itself? And very importantly: would emotional system behavior be desirable at all? Given the state of ongoing research into incorporating emotions in dialogue systems we found it timely to organize a Tutorial and Research Workshop on Affective Dialogue Systems ADS2004 at Kloster Irsee in Germany during June 14-16 2004. After two successful ISCA Tutorial and Research Workshops on Multimodal Dialogue Systems at the same location in 1999 and 2002 we felt that a workshop focusing on the role of affect in dialogue would be a valuable continuation of the workshop series. Due to its interdisciplinary nature the workshop attracted submissions from researchers with very different backgrounds and from many different research areas working on for example dialogue processing, speech recognition, speech synthesis, embodied conversational agents, computer graphics, animation, user modelling, tutoring systems, cognitive systems and human computer interaction.
