

A GUIDE FOR NON-SCIENTISTS

HOW TO READ A SCIENTIFIC PAPER IN 5 STEPS

1

SKIM READ TO GET THE "BIG PICTURE"

- Read the title, abstract and introduction
- Note the publishing date (is it over 10 years old?)
- Take note of any terms you don't understand to read into further

ASK YOURSELF SOME IMPORTANT QUESTIONS

- How big was the sample? It is representative of the larger population?
- Could the study be repeated?
- Who is the study funded by (if at all)?
- Do the authors identify the limitations of the study in the discussion section?
- Is the journal peer-reviewed?

2

3

IDENTIFY THE QUESTION THE AUTHORS ARE TRYING TO ANSWER

- Are the findings supported well by evidence?
- Are the findings novel?
- Are the findings supported by other work in the field?

INTERPRET THE RESULTS CAREFULLY

- Read the discussion and look for key issues and NEW findings.
- Examine any graphs and tables carefully, do they make sense without the captions?

4

5

SUMMARISE YOUR THOUGHTS AND MAKE SOME NOTES

- Take some notes to help clarify your thoughts.
- Do you have questions for the authors?
- Ask yourself: what should be done next?

Talk about it!

Talking about an article in a journal club or more informal environment forces active reading and participation with the material.

Science For Non Scientists:

Science for Non-scientists Sinclair Goodlad,1973 **Science for Non-scientists** J. S. R. Goodlad,1973 **Science but Not Scientists** Vernon L. Grose,2006-10-18 The historic Science Textbook Struggle a worldwide battle about the origin of the universe life and man erupted without warning It caught the scientific illuminati completely by surprise Why Because science textbooks had become filled with wild unbelievable stories about the beginning of everything And those tales were simply not scientific The universe starting with a Big Bang life arising out of a soup of lifeless amino acids humans produced by apes those myths had only replaced ancient Greek mythology and were being passed off as scientific truths Caught in the crossfire between educators news media textbook publishers religious notables and world renowned scientists including nineteen Nobel laureates was a private citizen Father of six schoolchildren he had only one goal to prove that science never will have answers for origins He was up against the arrogance of scientists who were determined to disguise their private beliefs as being the only explanations for the origin of the universe life and man This story concludes with a great victory for objectivity with more than 200 changes being made in textbooks over the objections of the National Academy of Sciences All discussion about origins was transformed by admission that stories about them are based solely on personal views of individual scientists Remarkably 3 000 scientists around the world later signed an affirmation to assure that this issue of belief over fact in science never be repeated Wernher von Braun father of Americas space program writes in the Foreword Vernon Grose in tracing out in Science But Not Scientists his personal involvement in the vortex of these two forces illustrates one more time the humanity of scientists their likelihood of being just as prejudiced and bigoted as anyone untrained in science He properly calls for objectivity rather than scientific consensus He rightly urges that message rather than messenger should be scrutinized and tested for validity Science will be the richer and humanity the ultimate beneficiary by heeding this clarion call **Communicating Science to Non-scientists** Julian Cribb,1992 **Lifting the Scientific Veil** Paul Sukys,1999 Lifting the Scientific Veil has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences Since nonscientists are generally responsible for making laws financing research or at the very least for voting it is essential that they understand the significant impact that science has on everyday life The book is designed to introduce nonscientists in an informative and comprehensible manner to four of the most significant scientific theories of the twentieth century the big bang quantum physics relativity and evolution After each theory is explained informally the book shows how that theory and related technology impact upon one s personal life Legal and political aspects of these theories are explored as well as philosophical and theological implications Life Sciences for the Non-scientist Viqar Zaman,2005 Illustrating how art philosophy and mythology juxtapose yet complement scientific thought and evolution the inclusion of poems and quotes at the end of each chapter serve to make this book truly unique Offers a rich blend of historical

background on important scientific discoveries ancient mythologies and recent phenomena such as SARS Includes over 50 illustrations with many in color Provides detailed explanations of technical terminology **Order And Disorder: Science Essentials For The Non-scientist** Myron Kaufman,2011-02-10 Order and Disorder is a non mathematical introduction to the most important ideas in science for university students not majoring in a scientific area The objective is to prepare non science students for making both life and political decisions involving science and helping them to understand the advances in sciences as covered and reported in the mass media The book is highly comprehensive in physics and chemistry and provides the essential background to discuss and gain a better appreciation of selected topics in biological and neurological sciences as well as astronomy and geology The topics are integrated with the recurring theme of order and disorder the organization achieved in the face of the never ending drive towards disorganization The book also lends an insight into some considerations of the philosophy of science as well as the applications of science to health and a variety of other professions The reading experience is enhanced by the provision of illuminating examples supplementary reading and a summary of each chapter New terminologies that appear here for the first time are set off in bold italics and annotated in the glossary Where basic principles are introduced and explained these are highlighted prominently in bold for ease of reference Stimulating discussion questions are presented at the end of each chapter giving readers some food for thought a Science for the Non-scientist Alva Rae Patton,1962 A little textbook written for non science majors with no previous courses in science or mathematics also for the general reader without scientific background *Mass Media and Science: where Non-scientists Obtain Science Information and Scientist and Non-scientist Attitudes Toward National Science Policies* Alton J. Ritchie,1971

Becoming Scientific Saima Salehjee,Mike Watts,2020-08-18 What does it mean to be sciencey Why do some people of all ages engage avidly with space and astronauts birds and butterflies chemicals and equations while others detest and hate the very ideas This book develops in depth analyses of the science identities of very different people young and old of diverse backgrounds in order to explore their immersion in and entanglement with the processes of learning science At the centre of the book lies a collection of their science life stories detailing their engagement with both formal education in schools and colleges and informal science learning in the culture of everyday life The text highlights how science educators teachers parents and science communicators more generally can foster and support the formation and transformation of people s science identities providing strategies to support the learning journey of children adolescents and adults within a broad range of learning environments **Life Sciences for the Non-scientist** Viqar Zaman,2005 Illustrating how art philosophy and mythology juxtapose yet complement scientific thought and evolution the inclusion of poems and quotes at the end of each chapter serve to make this book truly unique Offers a rich blend of historical background on important scientific discoveries ancient mythologies and recent phenomena such as SARS Includes over 50 illustrations with many in color Provides detailed explanations of technical terminology **Non-scientists Dissect Science** UNESCO.,1969 **Career**

Development of Scientists William W. Cooley, 1963 The Teaching of Information Science to Non-scientists Victor Rosenberg, American Society for Information Science. Tutorial, 1971* Scientist Speaks Out, A: A Personal Perspective On Science, Society And Change Glenn T Seaborg, 1996-07-29 In A Scientist Speaks Out A Personal Perspective on Science Society and Change Nobel Laureate Chemistry 1951 Glenn T Seaborg shares some of his thoughts and reflections on his broad interests from the formulation of national science policy to the promise of youth During a distinguished career in science and public service that spanned more than 50 years he published over 500 works and maintained a public speaking schedule that included about 700 speeches on a wide variety of topics This volume is a collection of nearly forty of his more popular speeches and articles directed at a mostly non scientific and non technical audience Since this volume is a compendium of reprints readers will be able to share some of Seaborg's thoughts as he originally penned them **Bulletin of the Atomic Scientists**, 1981-04 **Science, Public Policy and the Scientist Administrator** National Institutes of Health (U.S.). Committee on Staff-Training-Extramural Programs, 1972 Science, Public Policy and the Scientist Administrator National Institutes of Health (U.S.), 1971 **Scientific Writing = Thinking in Words** David Lindsay, 2011-02-01 Telling people about research is just as important as doing it But many researchers who in all other respects are competent scientists are afraid of writing They are wary of the unwritten rules the unspoken dogma and the inexplicably complex style all of which seem to pervade conventional thinking about scientific writing This book has been written to expose these phantoms as largely smoke and mirrors and replace them with principles that make communicating research easier and encourage researchers to write confidently It presents a way of thinking about writing that emulates the way good scientists think about research It concentrates on the structure of articles rather than simply on grammar and syntax So it is an ideal reference for researchers preparing articles for scientific journals posters conference presentations reviews and popular articles for students preparing theses and for researchers whose first language is not English Scientific Writing Thinking in Words expounds principles that produce scientific articles in a wide range of disciplines that are focussed concise and best of all easy to write and read As one senior scientist observed This book not only made me a better writer it made me a better scientist *Science Courses for Non-scientists*, 1945
