Science, Folklore and Ideology Geoffrey Ernest Richard Lloyd, 1999 This text takes a set of central topics from ancient Greek medicine and biology relating especially to beliefs about animals women and drugs and studies first the interaction between scientific theorising and folklore and second the ideological character of ancient scientific inquiry Within this framework the author looks at the development of zoological taxonomy the repercussions of prevailing Greek assumptions concerning the inferiority of the female sex on medical practice pharmacology and anatomy Anthropology is used to provide a comparative dimension to the discussion of ancient Greek popular beliefs *Flame of Miletus* John Freely, 2018-08-30 Miletus one of the wealthiest and most important towns in ancient Greece It was here on the Aegean coast of Asia Minor in the 6th century BC that the great traditions of Greek science and philosophy sparked into life setting in motion a chain of knowledge that would change the world forever This is the extraordinary story of Greek science from its earliest beginnings through its development in classical Athens and Hellenistic Alexandria and its subsequent diffusion to the wider world Most histories of Greek science end with the collapse of the Graeco Roman world in late antiquity and the closing of all classical schools of pagan philosophy in A D 529 But acclaimed historian John Freely here continues the story to tell of how the elements of Greek scientific and philosophical learning were adopted by the Islamic world and the transmission of Graeco Islamic science to western Europe as well as the preservation of Hellenic culture in Byzantium and its profound influence on the European renaissance and our modern world *A Companion to Science, Technology, and Medicine in Ancient Greece and Rome, 2 Volume Set* Georgia L. E. R. Lloyd,1999-12-01 Lloyd examines a set of topics central to ancient Greek medicine and biology in particular theories of beliefs about animals women and the efficacy of drugs He is concerned throughout with the interaction between scientific theory on the one hand and popular or folkloric belief on the other as well as with the ideological character of ancient scientific inquiry and its limitations Lloyd discusses the development of zoological taxonomy the impact that Greek assumptions about the inferiority of the female sex had on medical practice and the relationship between high and low science in pharmacology and anatomy Anthropology provides a comparative dimension raising broader issues under debate in the philosophy and sociology of science **Writing Science** Markus Asper,2013-06-26 Scientific and technological texts have not played a significant role in modern literary criticism This applies to Classics too despite the fact that a large part of the field s extant texts deal with questions of medicine mathematics and natural philosophy Focusing mostly on medical and mathematical texts this collection aims at approaching ancient Greek science and its texts from the cross disciplinary perspective of authorship Among the questions addressed are What is a scientific author In what respect does scientific writing differ from literary writing How does the author present himself as an authoritative figure through his text What strategies of trust do these authors employ These and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative perspective to their subjects As a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication **The Way and the Word** Geoffrey Ernest Richard Lloyd,Nathan Sivin,2002-01-01 The rich civilizations of ancient China and Greece built sciences of comparable sophistication each based on different foundations of concept method and organization In this engrossing book two world renowned scholars compare the cosmology science and medicine of China and Greece between 400 B C and A D 200 casting new light not only on the two civilizations but also on the evolving character of science Sir Geoffrey Lloyd and Nathan Sivin investigate the differences between the thinkers in the two civilizations what motivated them how they understood the cosmos and the human body how they were educated how they made a living and whom they argued with and why The authors new method integrally compares social political and intellectual patterns and connections demonstrating how all affected and were affected by ideas about cosmology and the physical world They relate conceptual differences in China and Greece to the diverse ways that intellectuals in the two civilizations earned their living interacted with fellow inquirers and were involved with structures of

authority By A D 200 the distinctive scientific strengths of both China and Greece showed equal potential for theory and practice Lloyd and Sivin argue that modern science evolved not out of the Greek tradition alone but from the strengths of China Greece India Islam and other civilizations which converged first in the Muslim world and then in Renaissance Europe
