The Frontiers of Ancient Science Brooke Holmes,Klaus-Dietrich Fischer,2015-03-30 Our understanding of science mathematics and medicine today can be deeply enriched by studying the historical roots of these areas of inquiry in the ancient Near East and Mediterranean The fields of ancient science and mathematics have in recent years witnessed remarkable growth The present volume brings together contributions from more than thirty of the most important scholars working in these fields in the United States and Europe in honor of the eminent historian of ancient science and medicine Heinrich von Staden Professor Emeritus of Classics and History of Science at the Institute of Advanced Study and William Lampson Professor Emeritus of Classics and Comparative Literature at Yale University The papers range widely from Mesopotamia to Ancient Greece and Rome from the first millennium B C to the early medieval period and from mathematics to philosophy mechanics to medicine representing both a wide diversity of national traditions and the cutting edge of the international scholarly community Ancient Mesopotamian Materials and Industries Peter Roger Stuart Moorey,1999 This is the first systematic attempt to survey in detail the archaeological evidence for the crafts and craftsmanship of the Sumerians Babylonians and Assyrians in ancient Mesopotamia covering the period ca 8000 300 B C E As creators of some of the earliest farming and urban communities known to us these people were among the first pioneers of many crafts and skills

that remain fundamental to modern ways of life Many of the raw materials for crafts had to be imported from outside the river valley of the Tigris and Euphrates providing an unusually sensitive indicator of the commercial and cultural contacts of Mesopotamia In this book Dr Moorey reviews briefly the textual evidence and then goes on to examine in detail the material evidence for a wide range of crafts using stones both common and ornamental animal products from hippopotamus ivory to ostrich egg shells ceramics glazed materials and glass metals and building materials With a comprehensive bibliography this will be a key work of reference for archaeologists and those interested in the early history of crafts and technology as well as for specialist historians of the ancient Near East

Shaping the Sciences of the Ancient and Medieval World Agathe Keller, Karine Chemla, 2024-05-14 This book contributes to a worldwide history of textual criticism and critical editions of ancient scientific texts It first looks at ancient editorial practices and at their impact on modern editions Contributions analyze how through time the perception of what a text was may have changed and influenced how scholarly texts were made accessible The second section looks at the historical political and social contexts within which editions and translations of ancient scientific texts were produced Finally the last two parts examine the specificities of editions and translations that bore on scholarly documents Not only is there a focus on how the elements specific to scientific texts such as diagrams and numbers were treated but case studies analyzing the specific work carried out to edit mathematical and astronomical texts of the past are also offered to the reader The scholarship displayed in this work lays the foundation for further studies on the history of critical editions and raises questions to those who make scholarly translations and critical editions today

Technology and Science in Ancient Civilizations Richard G. Olson, 2009-12-21 Why did the Greeks excel in geometry but lag behind the Mesopotamians in arithmetic How were the great pyramids of Egypt and the Han tombs in China constructed What did the complex system of canals and dykes in the Tigris and Euphrates river valley have to do with the deforestation of Lebanon's famed cedar forests This work presents a cross cultural comparison of the ways in which the ancients learned about and preserved their knowledge of the natural world and the ways in which they developed technologies that enabled them to adapt to and shape their surroundings Covering the major ancient civilizations those of Mesopotamia Egypt China Greece the Indus Valley and Meso America Olson explores how language and numbering systems influenced the social structure how seemingly beneficial construction projects affected a civilization's rise or decline how religion and magic shaped both medicine and agriculture and how trade and the resulting cultural interactions transformed the making of both everyday household items and items intended as art Along the way Olson delves into how scientific knowledge and its technological applications changed the daily lives of the ancients

Ancient Mesopotamia A. Leo Oppenheim, 2013-01-31 This splendid work of scholarship sums up with economy and power all that the written record so far deciphered has to tell about the ancient and complementary civilizations of Babylon and Assyria Edward B Garside New York Times Book Review Ancient Mesopotamia the area now called Iraq has received less attention than ancient Egypt and other

long extinct and more spectacular civilizations But numerous small clay tablets buried in the desert soil for thousands of years make it possible for us to know more about the people of ancient Mesopotamia than any other land in the early Near East Professor Oppenheim who studied these tablets for more than thirty years used his intimate knowledge of long dead languages to put together a distinctively personal picture of the Mesopotamians of some three thousand years ago Following Oppenheim's death Erica Reiner used the author's outline to complete the revisions he had begun To any serious student of Mesopotamian civilization this is one of the most valuable books ever written Leonard Cottrell Book Week Leo Oppenheim has made a bold brave pioneering attempt to present a synthesis of the vast mass of philological and archaeological data that have accumulated over the past hundred years in the field of Assyriological research Samuel Noah Kramer Archaeology A Leo Oppenheim one of the most distinguished Assyriologists of our time was editor in charge of the Assyrian Dictionary of the Oriental Institute and John A Wilson Professor of Oriental Studies at the University of Chicago

[The Greatest Cities of Ancient Mesopotamia](#) Charles River Editors, 2025-05-01 In southern Iraq a crushing silence hangs over the dunes For nearly 5 000 years the sands of the Iraqi desert have held the remains of the oldest known civilization the Sumerians When American archaeologists discovered a collection of cuneiform tablets in Iraq in the late 19th century they were confronted with a language and a people who were at the time only scarcely known to even the most knowledgeable scholars of ancient Mesopotamia The exploits and achievements of other Mesopotamian peoples such as the Assyrians and Babylonians were already known to a large segment of the population through the Old Testament and the nascent field of Near Eastern studies had unraveled the enigma of the Akkadian language that was widely used throughout the region in ancient times but the discovery of the Sumerian tablets brought to light the existence of the Sumerian culture which was the oldest of all the Mesopotamian cultures Although the Sumerians continue to get second or even third billing compared to the Babylonians

and Assyrians perhaps because they never built an empire as great as the Assyrians or established a city as enduring and great as Babylon they were the people who provided the template of civilization that all later Mesopotamians built upon The Sumerians are credited with being the first people to invent writing libraries cities and schools in Mesopotamia Ziskind 1972 34 and many would argue that they were the first people to create and do those things anywhere in world For a people so great it is unfortunate that their accomplishments and contributions not only to Mesopotamian civilization but to civilization in general largely go unnoticed by the majority of the public Perhaps the Sumerians were victims of their own success they gradually entered the historical record established a fine civilization and then slowly submerged into the cultural patchwork of their surroundings They also never suffered a great and sudden collapse like other peoples of the ancient Near East such as the Hittites Assyrians and Neo Babylonians did A close examination of Sumerian culture and chronology reveals that the Sumerians set the cultural tone in Mesopotamia for several centuries in the realms of politics governments arts literature and religion The Sumerians were truly a great people whose legacy continued long after they were gone Even today the world owes the Sumerians a tremendous amount When Western Europe was still in the Stone Age it was the Sumerians who invented writing and the wheel divided time into minutes and seconds tamed nature and built gigantic cities They embraced culture and the arts and their caravans crossed the desert opening up the first trade routes Their myths and legends inspired various origin stories and their memory lives on in the Old Testament They wrote the history of the birth of mankind The heritage of the Sumerian civilization and their successors is everywhere

[Before Nature](#) Francesca Rochberg, 2020-08-07 In the modern West we take for granted that what we call the natural world confronts us all and always has. But *Before Nature* explores that almost unimaginable time when there was no such conception of nature, no word reference or sense for it. Before the concept of nature formed over the long history of European philosophy and science, our ancestors in ancient Assyria and Babylonia developed an inquiry into the world in a way that is kindred to our modern science. With *Before Nature*, Francesca Rochberg explores that Assyrian-Babylonian knowledge tradition and shows how it relates to the entire history of science. From a modern Western perspective, a world not conceived somehow within the framework of physical nature is difficult, if not impossible, to imagine. Yet as Rochberg lays out ancient investigations of regularity and irregularity, norms and anomalies, clearly established an axis of knowledge between the knower and an intelligible, ordered world. Rochberg is the first scholar to make a case for how exactly we can understand cuneiform knowledge, observation, prediction, and explanation in relation to science without recourse to later ideas of nature. Systematically examining the whole of Mesopotamian science with a distinctive historical and methodological approach, *Before Nature* will open up surprising new pathways for studying the history of science.

Poetic Astronomy in the Ancient Near East Jeffrey L. Cooley, 2013-03-19 Modern science historians have typically treated the sciences of the ancient Near East as separate from historical and cultural considerations. At the same time, biblical scholars, dominated by theological concerns, have historically understood the Israelite god as separate from the natural world. Cooley's study, bringing to bear contemporary models of science history on the one hand and biblical studies on the other, seeks to bridge a gap created by 20th-century scholarship in our understanding of ancient Near Eastern cultures by investigating the ways in which ancient authors incorporated their cultures' celestial speculation in narrative. In the literature of ancient Iraq, celestial divination is

displayed quite prominently in important works such as *Enuma Eli* and *Erra and I um*. In ancient Ugarit as well the sky was observed for devotional reasons and astral deities play important roles in stories such as the Baal Cycle and *Shahar and Shalim*. Even though the veneration of astral deities was rejected by biblical authors in the literature of ancient Israel the Sun, Moon and stars are often depicted as active conscious agents. In texts such as Genesis 1, Joshua 10, Judges 5 and Job 38 these celestial characters, these sons of God, are living dynamic members of Yahweh's royal entourage willfully performing courtly, martial and calendrical roles for their sovereign. The synthesis offered by this book, the first of its kind since the demise of the pan-Babylonianist school more than a century ago, is about ancient science in ancient Near Eastern literature.
