

different ways of grinding, pounding, soaking, cooking, and baking the cereal grains. These are some of the ways man has made food from the seeds of grasses for thousands and thousands of years.

Here is an experiment to show how grass helps save the soil. Take a hike around your neighborhood. Look at all the spots where the earth is bare. Notice slopes, hillsides, and stream banks where no grass is growing. Notice how heavy rains have washed away the soil. Wind picks up bare soil, too, and blows it away. Think of the earth model you made when you were studying about water. Grass plants prevent the wearing away (or erosion) of land.

Food for animals and food for people; lawns for comfort, fun, and beauty; and networks of roots and stems and blades keeping precious topsoil from blowing or washing away! All this, and more, we owe to the large family of little green plants we call the grasses!
