1997 Massimo Mastrogregori, 2013-05-08 Annually published since 1930 the International bibliography of Historical Sciences IBOHS is an international bibliography of the most important historical monographs and periodical articles published throughout the world which deal with history from the earliest to the most recent times The works are arranged systematically according to period region or historical discipline and within this classification alphabetically The bibliography contains a geographical index and indexes of persons and authors *Science and Litigation* Terrence F. Kiely, 2002-04-29 The question what is science has been one of the most vigorously contested legal questions as to what is legally acceptable scientific foundation for the submission of expert opinion in a wide variety of cases especially in products liability cases The answer usually lies in the outcomes of past cases as well as objective scientific literature **Reader's Guide to the History of Science** Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn

**Instrumentation Between Science, State and Industry** B. Joerges, T. Shinn, 2012-12-06 these In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultra centrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more familiar The instrument systems developed by research technologists strike us as especially general open ended and flexible When tailored effectively research technology instruments potentially fit into many niches and serve a host of unrelated applications Their multi functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science Research technology activities link universities industry public and private research or metrology establishments instrument making firms consulting companies the military and metrological agencies Research technology practitioners do not follow the career path of the traditional academic or engineering professional When Science Offers Salvation Rebecca Dresser, 2001-03-22 Biomedical research today has a high public profile largely because of patient advocacy Following in the footsteps of HIV AIDS activists advocates representing an array of patient groups are now

vocal partners in the research enterprise Advocates want research practices and policies to be more responsive to the people who must live with the burdens of illness This book shows how advocates have transformed health research often but not always for the better Dresser is the first to examine patient advocacy through the lens of research ethics She reveals the many ways in which a quest for cures and improved therapies shapes advocacy work She exposes the bright and dark sides of patients expanded opportunities to enroll in clinical trials and join researchers in planning and evaluating studies She considers the virtues and drawbacks of giving patients more influence over how the government invests its research dollars She argues that advocates should do more to promote ethical human studies and responsible media reporting about research Patient advocates can help make research more ethical but advocacy raises ethical issues of its own This book clearly and vividly recounts the advocacy contribution to research and explores the thorny ethical issues facing research advocates
