

THE
SCIENCE OF BEAUTY,
AS DEVELOPED IN NATURE AND
APPLIED IN ART.

BY
D. R. HAY, F.R.S.E.

"The irregular combinations of fanciful invention may delight awhile, by that novelty of which the common satiety of life sends us all in quest; the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth."

DR JOHNSON.

The Science of Beauty, as Developed in Nature and Applied in Art David Ramsay Hay, 1856 *The Science of Beauty* David Ramsay Hay, 1856 **The Science of Beauty** David Ramsay Hay, 2017-07-19 Excerpt from *The Science of Beauty As Developed in Nature and Applied in Art* MY theory of beauty in form and colour being now admitted by the best authorities to be based on truth I have of late been often asked by those who wished to become acquainted with its nature and the manner of its being applied in art which of my publications I would recommend for their perusal This question I have always found difficulty in answering for although the law upon which my theory is based is characterised by unity yet the subjects in which it is applied and the modes of its application are equally characterised by variety and consequently occupy several volumes About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works [The Science of Beauty; As Developed in Nature and Applied in Art](#) David Ramsay Hay, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1856 edition Excerpt THE SCIENCE OF BEAUTY AS APPLIED TO SOUNDS It is well known that all sounds arise from a peculiar action of the air and that this action may be excited by the concussion resulting from the sudden displacement of a portion of the atmosphere itself or by the rapid motions of bodies or of confined columns of air in all which cases when the motions are irregular and the force great the sound conveyed to the sensorium is called a noise But that musical sounds are the result of equal and regular vibratory motions either of an elastic body or of a column of air in a tube exciting in the surrounding atmosphere a regular and equal pulsation The ear is the medium of communication between those varieties of atmospheric action and the seat of consciousness To describe fully the beautiful arrangement of the various parts of this organ and their adaptation to the purpose of collecting and conveying these undulatory motions of the atmosphere is as much beyond the scope of my present attempt as it is beyond my anatomical knowledge but I may simply remark that within the ear and most carefully protected in the construction of that organ there is a small cavity containing a pellucid fluid in which the minute extremities of the auditory nerve float and that this fluid is the last of the media through which the action producing the sensation of sound is conveyed to the nerve and thence to the sensorium where its nature becomes perceptible to the mind The impulses which produce musical notes must arrive at a certain frequency before the ear loses the intervals of silence between them and is impressed by only one continued sound and as they increase in frequency the sound becomes more acute upon the ear The
