understand and discover ways of addressing complex social and ecological problems we first need to find intimacy with our particular places and communities Cultivating a relationship to place often includes a negotiating process that involves both science and sensibility While science is one key part of an adaptive and resilient society the cultivation of a renewed sense of place and community is essential as well Science and Sensibility argues for the need for ecology to engage with philosophical values and economic motivations in a political process of negotiation with the goal of shaping humans treatment of the natural world Michael Vincent McGinnis aims to reframe ecology so it might have greater trans scientific awareness of the roles and interactions among multiple stakeholders in socioecological systems and he also maintains that deep ecological knowledge of specific places will be crucial to supporting a sustainable society He uses numerous specific case studies from watershed coastal and marine habitats to illustrate how place based ecological negotiation can occur and how reframing our negotiation process can influence conservation restoration and environmental policy in effective ways Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin,1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does
