Science Rationality And Neoclassical Economics:

Science, Rationality, and Neoclassical Economics L. D. Keita, 1992 This work examines the claim to scientific status made by supporters and practitioners of neoclassical economics The approach taken is that of the history and philosophy of science Analysis points to the conclusion that theories of economic choice are necessarily normative essentially because of the nature of human behavior

The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economics sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production

Fuzziness and Foundations of Exact and Inexact Sciences Kofi Kissi Dompere, 2012-08-23 The monograph is an examination of the fuzzy rational foundations of the structure of exact and inexact

sciences over the epistemological space which is distinguished from the ontological space. It is thus concerned with the demarcation problem. It examines exact science and its critique of inexact science. The role of fuzzy rationality in these examinations is presented. The driving force of the discussions is the nature of the information that connects the cognitive relational structure of the epistemological space to the ontological space for knowing. The knowing action is undertaken by decision choice agents who must process information to derive exact, inexact or true/false conclusions. The information processing is done with a paradigm and laws of thought that constitute the input/output machine. The nature of the paradigm selected depends on the nature of the information structure that is taken as input of the thought processing. Generally, the information structure received from the ontological space is defective from the simple principles of acquaintances and the limitations of cognitive agents operating in the epistemological space. How then do we arrive and claim exactness in our knowledge production system? The general conclusion of this book is that the conditions of the fuzzy paradigm with its laws of thought and mathematics present a methodological unity of exact and inexact sciences where every zone of thought has fuzzy covering.

Revealed Preference Theory, Rationality, and Neoclassical Economics , So it behoves the African student of economics to ponder the results of a meta-analysis of neoclassical economics as it strove to establish itself as a science in order to cement the claim that capitalist market economics describes the natural and optimal behaviour and decision making of humans. The point is that whereas the behaviours of the objects of the natural sciences were to be studied purely in terms of their physical or empirical manifestations, the objects of the social sciences required study not only of external or empirical manifestation of human behaviours but also the non-empirical causes of such behaviours. According to Samuelson (1938) the purpose of his novel approach was to lead eventually to the dropping of the last vestiges of the utility analysis. Consider Simon's approach to the problem. Broadly stated, the task is to replace the global rationality of economic man with a kind of rational behaviour that is compatible with the access to information and the computational capacities that are actually possessed by organisms including man in the kinds of environments in which such organisms exist. Simon (1955:99) What this evolutionary approach achieves is as follows: the paradigm of program-based behaviour appeals to the concept of rationality to explain behaviour that is based on agents engaging in purposeful action that is constantly seeking to adapt to the conditions of the environment.

Economics, Bounded Rationality and the Cognitive Revolution The late Herbert A. Simon, Massimo Egidi, Robin Lapthorn Marris, Riccardo Viale, The purpose of this book is to publish the ideas of the late Herbert Simon and sympathetic economists on the subject of bounded rationality, economics, cognitive science and related disciplines and to reprint some of Professor Simon's classic papers which have appeared in journals not widely read by economists. Not only on account of his Nobel Prize in Economics but also because of the widespread applications of his ideas and theories, it is especially valuable to readers to have a book of this kind at the present time. Currently in this whole field there is increasing emphasis on computer-related theory building. Herbert Simon, beginning from the time when

microcomputers did not exist was a pioneer of this approach The book begins with an edited transcript of a colloquium held between Herbert Simon and a group of Italian economists in Italy in 1988 It continues with the reprinted Simon papers and papers by three scholars Raymond Boudon Massimo Egidi and Riccardo Viale coming from different disciplines but holding a common interest in bounded rationality and ends with a response by a sympathetic economist Robin Marris Concepts, Theories, and Rationality in the Biological Sciences Gereon Wolters,2022-05-31 A Unified Report on the State of the Art in the Philosophy of Biology In October 1993 the University of Pittsburgh hosted the Second Pittsburgh Konstanz Colloquium in the Philosophy of Science with a focus on the rapidly growing field of philosophy of biology An interdisciplinary group of philosophers and scientists came together to discuss the basic theories and concepts of biology and their connections with ethics economics and psychology The colloquium organizers strove to create an event that would provide attendees with a wide overview on the current state of the philosophy of biology with as many topics and views on these topics as possible Those presentations are gathered here in a volume that offers the reader a varied and thorough survey of the field **The Blackwell Guide to the Philosophy of the Social Sciences** Stephen P. Turner,Paul A. Roth,2008-04-15 The Blackwell Guide to the Philosophy of the Social Sciences collects newly commissioned essays that examine fundamental issues in the social sciences Critical Realism, History, and Philosophy in the Social Sciences Timothy Rutzou,George Steinmetz,2018-08-09 This volume examines the relationship between history philosophy and social science and contributors explore questions concerning realism ontology causation explanation and values in order to address the question what does a post positivist social science look like **Representations of Scientific Rationality** Andoni Ibarra,Thomas Mormann,2023-03-13 Social Sciences in Sport Joseph Maguire,2014-01-02 Social Sciences in Sport presents discipline specific knowledge in the social sciences which aids in understanding the problems and potential of contemporary sport practices and experiences This interdisciplinary reference provides in depth coverage of sport studies and 14 social sciences drawing connections across these disciplines to illuminate key issues and illustrate possibilities for change Written by leading figures in the social sciences the book synthesizes theory and research in social science and sport into four distinct areas Identity which discusses individual development and ethical considerations from history philosophy and psychology Community which considers anthropology sociology geography and media studies when looking at sport in social groups Capital which draws research in status wealth power and resources from economics political science and international relations Governance which discusses the enhancement of sport through law social policy management studies and education Organized around these topics into four parts this reference places sport in the broader social sciences showing where researchers in kinesiology and other disciplines can augment their knowledge base Noting the range of issues and concerns in today s sport environment readers will analyze the potential of a human development model in sport studies Editor Joseph Maguire and an esteemed team of contributors present the evolution of sport in various social sciences A stage setting

Rationality and the Social Sciences (RLE Social Theory) S.I. Benn,G.W. Mortimore,2014-08-21 The concepts of rationality that are used by social scientists in the formation of hypotheses models and explanations are explored in this collection of original papers by a number of distinguished philosophers and social scientists The aim of the book is to display the variety of the concepts used to show the different roles they play in theories of very different kinds over a wide range of disciplines including economics sociology psychology political science and anthropology and to assess the explanatory and predictive power that a theory can draw from such concepts

A History of Political Science Mark Bevir,2022-08-11 This Element denaturalises political science stressing the contestability and contingency of ideas traditions subfields and even the discipline itself The history of political science is less one of scholars testing and improving theories by reference to data than of their appropriating and transforming ideas often obscuring or obliterating former meanings to serve new purposes in shifting political contexts Political science arose in the late nineteenth century as part of a wider modernism that replaced earlier developmental narratives with more formal explanations It changed as some scholars yoked together behavioural topics quantitative techniques and positivist theory and as other scholars rejected their doing so Subfields such as International Relations remained semi detached and focused on policy as much as theory Furthermore the shifting fashions within political science modernism behaviouralism realism neoliberalism the new institutionalism have informed the policies by which governments have tried to tame contingency and govern people

The Varieties of Economic Rationality Michel Zouboulakis,2014-01-21 The concept of economic rationality is important for the historical evolution of Economics as a scientific discipline The common idea about this concept even between economists is that it has a unique meaning which is universally accepted This new volume argues that economic rationality is not not a universal concept with one single meaning and that it in fact has different if not conflicting interpretations in the evolution of discourse on economics In order to achieve this the book traces the historical evolution of the concept of economic rationality from Adam Smith to the present taking in thinkers from Mill to Friedman and encompassing approaches from neoclassical to behavioural economics The book charts this history in order to reveal important instances of conceptual transformation of the meaning of economic rationality In doing so it presents a uniquely detailed study of the historical change of the many faces of the homo oeconomicus

Behavioural Sports Economics Hannah Josepha Rachel Altman, Morris Altman, Benno Torgler, 2021-12-19 Economists have entered into the realm of sports to provide what they believe to be more cogent explanations for sport related behaviour and to suggest ways in which incentives can improve sports outcomes But prices and income the traditional workhorses of conventional economics can only provide partial explanations and understandings Drawing on a bounded rationality approach to behavioural economics this book demonstrates the analytical insights to be gained by supplementing the conventional economics toolbox with psychological cognitive sociological and institutional factors The international cast list of contributors cover a wide range of sports topics on which a behavioural approach can reveal new insights These include preferences managerial efficiency choking doping favouritism athlete well being and spectator behaviour Throughout the book there is an emphasis on the cognitive limits to smart decision making as well as the critical role played by the decision making environment This volume demonstrates that adopting a bounded rationality approach complimented with other behaviouralist approaches helps to better explain sport related behavioural sub optimal behavioural and market failures It also provides insights that could be used to improve sports outcomes and the well being of those involved in sports and to better configure policy to enhance sports performance This groundbreaking book will be an indispensable reference to students and scholars of sports economics sports management and sports science

Philosophico-Methodological Analysis of Prediction and its Role in Economics Wenceslao J. Gonzalez, 2015-02-19 This book develops a philosophico methodological analysis of prediction and its role in economics Prediction plays a key role in economics in various ways It can be seen as a basic science as an applied science and in the application of this science First it is used by economic theory in order to test the available knowledge In this regard prediction has been presented as the scientific test for economics as a science Second prediction provides a content regarding the possible future that can be used for prescription in applied economics Thus it can be used as a guide for economic policy i e as knowledge concerning the future to be employed for the resolution of specific problems Third prediction also has a role in the application of this science in the public arena This is through the decision

making of the agents individuals or organizations in quite different settings both in the realm of microeconomics and macroeconomics Within this context the research is organized in five parts which discuss relevant aspects of the role of prediction in economics I The problem of prediction as a test for a science II The general orientation in methodology of science and the problem of prediction as a scientific test III The methodological framework of social sciences and economics Incidence for prediction as a test IV Epistemology and methodology of economic prediction Rationality and empirical approaches and V Methodological aspects of economic prediction From description to prescription Thus the book is of interest for philosophers and economists as well as policy makers seeking to ascertain the roots of their performance The style used lends itself to a wide audience

Realizing an Alternative Political Economy of Sustainability Arturo Hermann, 2025-07-25 Engagement with and between a plurality of progressive non neoclassical traditions is an important step in fostering a more capacious understanding of sustainability both as a concept and as a political objective To that end this book provides a critical overview of the development of alternative perspectives on the economics of sustainability highlighting the presence of various strands of heterodox economics and radical ecology and arguing that greater engagement between these schools of thought is required to help formulate viable alternatives to the prevailing neoliberal ideology The chapters in Part I of this volume Ecofeminism Social Ecological Economics Bioeconomics Steady State present a series of concrete policy proposals for building socially just sustainable socio economic processes Each chapter utilizes the acumen of a given heterodox tradition to formulate policy reforms to secure this objective In Part II Heterodox Macroeconomics and Sustainability the contributors make the case for more radical forms of socio economic transformation particularly emphasizing community local and regional level initiatives for change The final part Circular Economy Civil Economy and Other Heterodox Contributions reflects on the potential strategic political economic contribution of heterodox economics to building more sustainable and just socio economic practices in a broader sense These chapters demonstrate that heterodox economics and radical ecology can productively contribute to realizing sustainability in areas such as economic pedagogy through working in conjunction with other social justice movements and by challenging extant neoliberal ideologies of sustainability They also deliberate on some of the institutional and epistemological challenges that confront heterodox practitioners seeking to make such an impact This volume is essential reading for anyone concerned with a viable alternative conception of the economy and sustainability including readers from all schools of heterodox economics and radical ecology and people and organizations involved in various ways in building an alternative political economy of sustainability

Foundations of Economic Method Lawrence A. Boland, 2020-09-23 Many consider *Foundations of Economic Method* to be Lawrence Boland's best work This updated edition is radically changed from the original and will be much appreciated by thinkers within economics The book positions methodology vis vis the current practice of economists and is all the better for it Yet another book that not only deserves to be read by those within the field of economic methodology but

also by those involved in economics at all Boland is back *How Do Institutions Steer Events?* John Wettersten, 2006
Theories of explanation in the social sciences vacillate between holism and individualism This book contends that this has
been a consequence of theories of rationality which assume that rationality requires coherent theories to be shown to be true
It claims that traditional explanations place unrealistic demands on individuals and institutions
