Fairy-Tale Science Suzanne Magnanini, 2008-05-24 Between 1550 and 1650 Europe was swept by a fascination with wondrous accounts of monsters and other marvels of valiant men slaying dragons women giving birth to animals young girls growing penises and all manner of fantastic phenomena Known as fairy tales these stories had many guises and inhabited a variety of literary texts The first two collections of such fairy tales published on the continent Giovan Francesco Straparola s *Le piacevoli notti* and Giambattista Basile s *Lo cunto de li cunti* were greeted with much enthusiasm at home and abroad and essentially established a new literary genre Contrary to popular thought Italy not Germany or France was the birthplace of the literary fairy tale This fascination with the marvellous also extended to the worlds of science medicine philosophy and religion and many treatises from the period focused on discussions of monsters demons magic and witchcraft In *Fairy Tale Science* Suzanne Magnanini looks at these science fictions and explores the birth and evolution of the literary fairy tale in the context of early modern discourses on the monstrous She demonstrates how both the normative literary theories of the Italian intellectual establishment and the emerging New Science limited the genre s success on its native soil Natural philosophers physicians and clergymen positioned the fairy tale in opposition to science fixing it as a negative pole in a binary system one which came to define both a new type of scientific inquiry and the nascent literary genre Magnanini also suggests that by identifying their literary production with the monstrous and the feminine Straparola and Basile contributed to the marginalization of the new genre A wide ranging yet carefully crafted study *Fairy Tale Science* investigates the complex interplay between scientific

discourse and an emerging literary genre and expands our understanding of the early modern European imagination

Graphic Science Darryl Cunningham, 2017-10-17 Darryl Cunningham's simplicity of style is deceptive I never fail to learn from his work always educational and deeply human too This is the sort of book you think you have bought for your child then refuse to give up until you have finished it first Buy two copies to be on the safe side Robin Ince Much is known about scientists such as Darwin Newton and Einstein but what about lesser known scientists people who have not achieved a high level of fame but who have contributed greatly to human knowledge What were their lives like What were their struggles aims successes and failures How do their discoveries fit into the bigger picture of science as a whole Overlooked sidelined excluded discredited key figures in scientific discovery come and take their bow in an alternative Nobel Prize gallery in a colourful graphic novel by Darryl Cunningham Antoine Lavoisier the father of French chemistry who gave oxygen its name Lavoisier was a wealthy man who found himself on the wrong side of a revolution and paid the price with his

life The contribution to his work by his wife Marie Anne Lavoisier is only now being fully recognised Mary Anning a poor working class woman who made her living fossil hunting along the beach cliffs of southern England Anning found herself excluded from the scientific community because of her gender and social class Wealthy male experts took credit for her discoveries George Washington Carver born a slave Carver become one of the most prominent botanists of his time as well as a teacher at the Tuskegee Institute Carver devised over 100 products using one major ingredient the peanut including dyes plastics and gasoline Alfred Wegener a German meteorologist balloonist and arctic explorer his theory of continental drift was derided by other scientists and was only accepted into mainstream thinking after his death He died in Greenland on an expedition his body lost in the ice and snow Nikola Tesla a Serbian American inventor electrical engineer mechanical engineer physicist and futurist best known for his contributions to the design of the modern alternating current AC electricity supply system A competitor of Edison Tesla died in poverty despite his intellectual brilliance Jocelyn Bell Burnell a Northern Irish astrophysicist As a postgraduate student she discovered the first radio pulsars supernova remnants while studying and advised by her thesis supervisor Antony Hewish for which Hewish shared the Nobel Prize in physics while Bell Burnell was excluded Fred Hoyle an English astronomer noted primarily for the theory of stellar nucleosynthesis the process whereby most of the elements on the Periodic Table are created He was also noted for the controversial positions he held on a wide range of scientific issues often in direct opposition to prevailing theories This eccentric approach contributed to him to being overlooked by the Nobel Prize committee for his stellar nucleosynthesis work Any one of these figures could have been awarded a Nobel prize Not every scientific discoverer was lauded in their time for reasons of gender race or lack of wealth or in the case of Lavoisier being too wealthy in the 21st century there are many more reparations and reputations to be made
