questions by formulating the concept of structural disaster afresh First the book presents the path dependent development of structural disaster through a sociological reformulation of path dependent mechanisms not only in the context of nuclear energy but also in the context of renewable energy Secondly it traces the origins of structural disaster to a secret accident involving standardized military technology immediately before World War II and opportunistic utilization of the Great Kanto Earthquake of 1923 thus reconstructing the development of structural disaster within a long term historical perspective Maintaining distance from conflicts of interest and cultural essentialisms this book highlights configurations and mechanisms of structural disasters that are far more persistent more universal but less visible and that have turned risk into suffering The book seeks to cast light on an important new horizon of the science technology society interface in the sociology of science and technology science and technology studies the sociology of disaster the social history of the military industrial university complex and beyond
