**Design Science Decade: Phase 1 Document 6** R. Buckminster Fuller, The documents in this series originated with a proposal made by R Buckminster Fuller to the International Union of Architects I U A at their VIIth Congress in London England in July 1961 launching the World Design Science Decade He proposed then that the architectural schools around the world be encouraged by the I U A to invest the next ten years in a continuing problem of how to make the total world s resources which in 1961 serve only 40% serve 100% of humanity through competent design despite a continuing decrease of metal resources per capita In essence The World Design Science Decade series of documents suggests in great detail ways in which world architectural schools and specifically their students should initiate and assume The Design Science Decade The total series includes many of Fuller s most prescient ideas A note from the series editor John McHale Though the language of some of the texts may seem difficult at first approach it should be borne in mind that one of our major problems in thinking today 1965 is the use of language systems which still represent a fixed structurally compartmentalized world view The terms available to us for the expression of dynamic rather than static concepts are far from satisfactory Fuller s language is particularly representative of the transitional state of the western world between the older traditional noun centered culture to its present day changing verb centered culture In his search for an adequately descriptive terminology he tends to employ concepts and usages from many different fields juxtaposed in ways which may be unfamiliar to those more customarily restrained within the vocabularies of particular disciplines Description by the Buckminster Fuller Institute courtesy of The Estate of R Buckminster Fuller      **The Signature of Power** Harold D. Lasswell, 2017-07-05 Advanced industrial societies are becoming aware of the impact of what they do to the physical and biological environment and also what that environment does to individuals In The Signature of Power Harold D Lasswell examines the symbolic use people make of their surroundings and the complexity of the way they interpret an altered environment Transformed habitats can change experiences and behaviors All people seek to maximize their preferred events such as power and wealth when they use the environment be it through glass skyscrapers or Gothic estates In all cases physical structures give expression to the perspectives of influential individuals and groups This volume considers the complex interplay between the material and the symbolic Physical changes introduced for political purposes by architects planners and engineers are guided by the perspectives of designers These and other interactions in human society are simultaneous acts of communication and collaboration Regardless of whether physical resources are used to transmit messages such interactions nevertheless have a degree of communicative impact Physical structures may be profoundly affected by the purposes assumptions and identities of those people who plan or change them Environmental design says Lasswell is an instrument of political power
