Science And Moral Values:

Science, Pseudo-science and Moral Values Gila Gat-Tilman, 2008 Every professor knows his own area but who is able to see the whole picture Based on the author's background and the wide ranging areas she has studied in the university Gila Gat Tilman presents articles on science pseudo science and moral values from an all encompassing perspective The first article in this book represents an overview of science and academic knowledge Articles that follow discuss moral values the Sabbath experiments on animals and the philosophical questions of certainty Additionally she includes the biography of two people whose influence has helped hone her viewpoint Science has improved our lives and pseudo science has followed suit But pseudo science built upon baseless faulty and tendentious theories and assumptions has won unjustified credibility as if it was real science and has only caused harm In ancient times there were philosophers like Socrates who investigated the question of what is justice and what is the good They said that one should know what is the good in order to be good They clarified what are the values that one should hold dear In the generations that followed those values were sanctified by religions were kept in a sanctified way and improved the life of the society In our days the values in the Ten Commandments are not enough because technology has markedly changed our life increased our performance abilities and created new layers of relationships between strangers Inventions such as the engine telephone television and the computer enable mass communication with all the implications For example today from birth to death every person is registered and the authorities have records about them that are used to influence their educational and employment chances The Ten Commandments are a start for establishing the basis of moral values in our day but they are not enough We therefore need additional basic values which when observed in a sacrosanct way will provide people with the ability to properly integrate their social life into our society for the good of everyone The author has a broad varied academic knowledge in many fields Her keen ability to focus on what is happening to others and put herself in their position has enabled her to see the bigger picture in society and to understand which values are lacking and must be widely adopted This book offers these moral values *Modern Science and Moral Values*, 1973 Science and Ethical Values Bentley Glass, 1981-12-10 *A Broad View of Science and Moral Values* Gila Gat-Tilman, Judy Freed, 2012 At a university conference someone said Every scientist and professor knows his own field but who sees the whole picture This book presents the big picture in the article Overview of Science and Academic Knowledge The article The Influence of the Modern Age Upon Moral Values explains which values should be adopted in addition to the Ten Commandments in light of the developments in modern society The book contains articles about animals and about the Sabbath and two short articles about the higher realm and the human spirit and about the certainty of knowledge While the author has studied and worked mainly in Biology she also has an M A in Philosophy and has studied many other fields as well She has much life experience some of which is described in her previous book *Islamic Intrigue* at the University published in English by Mazo Publishers Jerusalem Israel Her ability to watch and to place herself in the

position of others has enabled her to write the articles in this book Modern Science and Moral Values, 1973 *The Moral Landscape* Sam Harris, 2011-09-13 Sam Harris dismantles the most common justification for religious faith that a moral system cannot be based on science **Science and Moral Values** John Vollrath, 1990-07-16 Looks at the effect of moral values on science and the effect of science on moral values It begins by describing five types of moral assessment It then applies those five types of assessment to five areas of science Specifically it applies utilitarianism to behavior modification expected utility to recombinant DNA research rights and duties to experiments on human subjects justice to eugenic programs and standards of virtue to the developers of the atomic bomb The book examines the effect of science on moral values by considering whether scientific explanations of our behavior primarily in biology and psychology should reduce our confidence in traditional moral beliefs about our behavior Also it considers whether scientific patterns of thinking should be standards for moral patterns of thinking Suitable for courses in ethics or the philosophy of science *Ethical Values in Tyhe Age of Science*, **Science and Values** Larry Laudan, 1986-01-16 Laudan constructs a fresh approach to a longtime problem for the philosopher of science how to explain the simultaneous and widespread presence of both agreement and disagreement in science Laudan critiques the logical empiricists and the post positivists as he stresses the need for centrality and values and the interdependence of values methods and facts as prerequisites to solving the problems of consensus and dissent in science **Science and Values** Joseph Grünfeld, 1973-01-01 **Reconciling Science and Religion** Peter J. Bowler, 2014-04 Although much has been written about the vigorous debates over science and religion in the Victorian era little attention has been paid to their continuing importance in early twentieth century Britain Reconciling Science and Religion provides a comprehensive survey of the interplay between British science and religion from the late nineteenth century to World War II Peter J Bowler argues that unlike the United States where a strong fundamentalist opposition to evolutionism developed in the 1920s most famously expressed in the Scopes monkey trial of 1925 in Britain there was a concerted effort to reconcile science and religion Intellectually conservative scientists championed the reconciliation and were supported by liberal theologians in the Free Churches and the Church of England especially the Anglican Modernists Popular writers such as Julian Huxley and George Bernard Shaw sought to create a non Christian religion similar in some respects to the Modernist position Younger scientists and secularists including Rationalists such as H G Wells and the Marxists tended to oppose these efforts as did conservative Christians who saw the liberal position as a betrayal of the true spirit of their religion With the increased social tensions of the 1930s as the churches moved toward a neo orthodoxy unfriendly to natural theology and biologists adopted the Modern Synthesis of genetics and evolutionary theory the proposed reconciliation fell apart Because the tensions between science and religion and efforts at reconciling the two are still very much with us today Bowler s book will be important for everyone interested in these issues *The New Science of Axiological Psychology* Leon Pomeroy, 2005-01-01 This book uses scientific validity measures to create empirical

value science and a normative new science of axiological psychology by integrating cognitive psychology with Robert S Hartman's formal theory of axiological science. It reveals a scientific way to identify and rank human values, achieving values appreciation, values clarification, and values measurement for the twenty-first century. Is Science Value Free? Hugh Lacey, 2005-06-23 Hugh Lacey discusses how science and values interact with a focus on a discussion of development and science's place in development, particularly in third-world countries.

Psychology as a Moral Science Svend Brinkmann, 2010-09-27 What does morality have to do with psychology in a value-neutral postmodern world? According to a provocative new book, everything. Taking exception with current ideas in the mainstream, including cultural evolutionary and neuropsychology, as straying from the discipline's ethical foundations, *Psychology as a Moral Science* argues that psychological phenomena are inherently moral and that psychology as prescriptive and interventive practice reflects specific moral principles. The book cites normative moral standards as far back as Aristotle that give human thoughts, feelings, and actions meaning and posits psychology as one of the critical methods of organizing normative values in society. At the same time, it carefully notes the discipline's history of being sidetracked by overemphasis on theoretical constructs and physical causes, what the author terms the psychologizing of morality. This synthesis of ideas brings an essential unity to what can sometimes appear as a fragmented area of inquiry at odds with itself. The book's interpretive, pragmatic approach revisits core psychological concepts as supporting normative value systems. It traces how psychology has shaped society's view of morality, confronts the naturalistic fallacy in contemporary psychology, explains why moral science need not be separated from social science, addresses challenges and critiques to the author's work from both formalist and relativist theories of morality, and with its bold call to reason, *Psychology as a Moral Science* contains enough controversial ideas to spark great interest among researchers and scholars in psychology and the philosophy of science.

Food futures: ethics, science and culture I. Anna S. Olsson, Sofia M. Araújo, M. Fátima Vieira, 2023-07-31 Food is at the centre of human existence. We eat every day, not only to satisfy our physical needs but also as part of cultural and social interaction. Food choices and markets shape the agricultural landscape and the cities we live in. Whereas what we choose to eat and feed our family is part of who we are, a growing number of actors compete to influence our food habits through marketing strategies and nutritional advice. And ethical considerations are coupled with every choice over food, whether related to production, distribution, consumption, food waste, policy in general, marketing, or advice. Given the variety of implications, the food problem entails the construction of an inclusive society. Must redirect the concerns about food in the present to the imagination of future alternatives. The search for innovative solutions calls for multidisciplinary critical enquiry and utopian thinking will be instrumental in that regard. This book brings together work by scholars in a wide range of disciplines addressing many different topics related to food futures. Topics covered include food and literature, food waste, food communication, food policy, corporate social responsibility, and public procurement.

Criminology as a Moral Science Anthony E Bottoms, Jonathan Jacobs, 2023-09-07 This book proposes an explicit recognition of criminology as a moral science a philosophically textured appreciation of the presence and role of values in people's reasoning and motivation set within an empirically rigorous social scientific account This endeavour requires input from both criminologists and philosophers and careful dialogue between them *Criminology as a Moral Science* provides such a dialogue not least about the so called fact value distinction but also about substantive topics such as guilt and shame The book also provides philosophically informed accounts of morality in practice in several criminological contexts these include whistleblowing practices within a police service the dilemmas of mothers about who and what to tell about a partner's imprisonment and how persistent offenders begin to try to turn their lives around to desist from crime The issues raised go to the heart of some currently pressing topics within criminology notably the development of evidence based practice which requires some kind of stable bridge to be built between research evidence facts and proposals for policy evaluative recommendations
