Nancy Winstel joined the women's college basketball team at Northern Kentucky University as a walk on. She had little basketball experience, never having played on a high school team; her high school didn't even have girls' basketball. Despite her inexperience, Winstel served NKU as a talented student athlete, but her legacy didn't end there. Appointed head coach at NKU in 1983, she gained a reputation as one of the most successful coaches in women's college basketball history with more than 500 wins. Winstel garnered these victories in an athletic landscape vastly different from the one she knew as an NKU undergraduate. Many of the student athletes on her twenty-first century squads have been playing organized basketball for most of their lives. In a post-Title IX America, more women than ever are involved in team sports, and their teams attract a large following of enthusiasts. NKU professor Robert K. Wallace, one of many passionate fans of the Norse, has brought his appreciation for the team's players and their accomplishments to *Thirteen Women Strong: The Making of a Team*, chronicling the 2006-07 season of twelve remarkable student athletes and their legendary coach. Wallace was granted unprecedented access to the team, sitting in on closed meetings and practice sessions, following the players through grueling training drills, intensely close games, exhilarating wins, and anguished losses. During the 2005-06 season, a squad of NKU women with no seniors achieved unanticipated success, earning a 27-5 record that led to a Great Lakes Valley Conference championship. The entire team returned the following season to expectations of even greater success, but their 2006-07 season was plagued by injuries and other major obstacles. After a string of tough losses, the women mounted a comeback to earn a 21-8 record and reach the NCAA Division II Tournament once again. The team's story is one of loss, triumph, and personal growth. *Thirteen Women Strong* profiles each member of the team, including the coach. Wallace provides keen insight into the emotional and physical demands of high-level competition. Exploring the impact of Title IX legislation on women's collegiate sports with the critical eye of a scholar and the love of a fan, Wallace documents the story of how thirteen women faced high expectations and difficult trials to come together as a team, their growth culminating in the 2007-08 national championship. *Thirteen Women Strong* is a fascinating study of this dynamic group of female student athletes and their renowned leader.      **Crime Science** Joe Nickell, John F. Fischer, 1998-12-17 This comprehensive guide to forensic investigation delivers the goods for the educated layperson; readers will be hard pressed to put it down. USA Today Forensic experts Joe Nickell and John Fischer introduce readers to the work of firearms experts, document examiners, fingerprint technicians, medical examiners, and forensic anthropologists. These topics are explained in clear terms without technical jargon. Nickell and Fischer describe

fingerprint classification and autopsies explain how fibers link victims to their killers and examine the science underlying DNA profiling and toxicological analysis From weapons analysis to handwriting samples to shoe and tire impressions Crime Science outlines the indispensable tools and techniques that investigators use to make sense of a crime scene Each chapter closes with a study of an infamous case to demonstrate how the principles of forensic science work in practice Case studies including the O J Simpson trial the Lindbergh kidnapping the death of Marilyn Monroe the World Trade Center bombing the assassination of the Romanovs and the Atlanta child murders

**Crime Science** Melissa J Smith,Nick Tilley,2013-06-17 This book provides an introduction to crime science setting out its essentials It provides a major statement of the nature and aspirations of crime science and presents a series of case studies providing examples in different settings of the approach in action ranging from preventing crime within correctional institutions to the use of techniques such as DNA fast tracking for burglary

Victimology and crime prevention are growing interrelated areas cutting across several disciplines Victimology examines victims of all sorts of criminal activity from domestic abuse to street violence to victims in the workplace who lose jobs and pensions due to malfeasance by corporate executives Crime prevention is an important companion to victimology because it offers insight and techniques to prevent situations that lead to crime and attempts to offer ideas and means for mitigating or minimizing the potential for victimization In many ways the two fields have developed along parallel yet separate paths and the literature on both has been scattered across disciplines as varied as sociology law and criminology public health and medicine political science and public policy economics psychology and human services and more The Encyclopedia of Victimology and Crime Prevention provides a comprehensive reference work bringing together such dispersed knowledge as it outlines and discusses the status of victims within the criminal justice system and topics of deterring and preventing victimization in the first place and responding to victims needs Two volumes containing approximately 375 signed entries provide users with the most authoritative and comprehensive reference resource available on victimology and crime prevention both in terms of breadth and depth of coverage In addition to standard entries leading scholars in the field have contributed Anchor Essays that in broad strokes provide starting points for investigating the more salient victimology and crime prevention topics A representative sampling of general topic areas covered includes interpersonal and domestic violence child maltreatment and elder abuse street violence hate crimes and terrorism treatment of victims by the media courts police and politicians community response to crime victims physical design for crime prevention victims of nonviolent crimes deterrence and prevention helping and counseling crime victims international and comparative perspectives and more

Security: Technology, Detection, and Decision Making* Elena Rusconi, Kenneth C. Scott-Brown, Andrea  
Szymkowiak, 2015-08-03 In security science efficient operation depends typically on the interaction between technology  
human and machine detection and human and machine decision making A perfect example of this interplay is gatekeeping  
which is aimed to prevent the passage of people and objects that represent known threats from one end to the other end of  
an access point Gatekeeping is most often achieved via visual inspections mass screening random sample probing and or  
more targeted controls on attempted passages at points of entry Points of entry may be physical e g national borders or  
virtual e g connection log ons Who and what are defined as security threats and the resources available to gatekeepers  
determine the type of checks and technologies that are put in place to ensure appropriate access control More often than not  
the net performance of technology aided screening and authentication systems ultimately depends on the characteristics of  
human operators Assessing cognitive affective behavioural perceptual and brain processes that may affect gatekeepers while  
undertaking this task is fundamental On the other hand assessing the same processes in those individuals who try to breach  
access to secure systems e g hackers and try to cheat controls e g smugglers is equally fundamental and challenging From a  
security standpoint it is vital to be able to anticipate focus on and correctly interpret the signals connected with such  
attempts to breach access and or elude controls in order to be proactive and to enact appropriate responses Knowing  
cognitive behavioral social and neural constraints that may affect the security enterprise will undoubtedly result in a more  
effective deployment of existing human and technological resources Studying how inter observer variability human factors  
and biology may affect the security agenda and the usability of existing security technologies is of great economic and policy  
interest In addition brain sciences may suggest the possibility of novel methods of surveillance and intelligence gathering  
This is just one example of a typical security issue that may be fruitfully tackled from a neuroscientific and interdisciplinary  
perspective The objective of our Research Topic was to document across relevant disciplines some of the most recent  
developments ideas methods and empirical findings that have the potential to expand our knowledge of the human factors  
involved in the security process To this end we welcomed empirical contributions using different methodologies such as those  
applied in human cognitive neuroscience biometrics and ethology We also accepted original theoretical contributions in the  
form of review articles perspectives or opinion papers on this topic The submissions brought together researchers from  
different backgrounds to discuss topics which have scientific applicative and social relevance **Data Mining Trends and**
