Science As History:

Science in History J. D. Bernal, 2012-10-04 J D Bernal's monumental work *Science in History* was the first full attempt to analyse the reciprocal relations of science and society throughout history from the perfection of the flint hand axe to the hydrogen bomb In this remarkable study he illustrates the impetus given to and the limitations placed upon discovery and invention by pastoral agricultural feudal capitalist and socialist systems and conversely the ways in which science has altered economic social and political beliefs and practices In this first volume Bernal discusses the nature and method of science before describing its emergence in the Stone Age its full formation by the Greeks and its continuing growth probably influenced from China under Christendom and Islam in the Middle Ages Andrew Brown Bernal's biographer with a nice sense of paradox has said of him he was steeped in history in part because he was always thinking about the future He goes on to say *Science in History* is an encyclopaedic yet individual and colourful account of the emergence of science from pre historic times There is detailed coverage of the scientific revolution of the Enlightenment the Industrial Age and the first two thirds of the twentieth century The writing flows and is devoid of the tortured idioms that mar so many academic histories of science After reading it it is easy to agree with C P Snow's orotund observation that Bernal was the last man to know science Faber Finds are reissuing the illustrated four volume edition first published by Penguin in 1969 The four volumes are Volume 1 The Emergence of Science Volume 2 The Scientific and Industrial Revolutions Volume 3 The Natural Sciences in Our Time Volume 4 The Social Sciences Conclusion This stupendous work is a magnificent synoptic view of the rise of science and its impact on society which leaves the reader awe struck by Professor Bernal's encyclopaedic knowledge and historical sweep Times Literary Supplement *Reader's Guide to the History of Science* Arne Hessenbruch, 2000 First Published in 2001 Routledge is an imprint of Taylor Francis an informa company **Introduction to the History of Science** George Sarton, 1927 **A Little History of Science** William Bynum, 2012-10-15 A spirited volume on the great adventures of science throughout history for curious readers of all ages In Mr Bynum's telling a little history goes a long way Alan Hirshfeld Wall Street Journal For readers of all ages this inviting book tells a great adventure story the history of science It takes readers to the stars through the telescope as the sun replaces the earth at the center of our universe It digs beneath the surface of the planet charts the evolution of chemistry's periodic table introduces the physics that explain electricity gravity and the structure of atoms It recounts the scientific quest that revealed the DNA molecule and opened unimagined new vistas for exploration Focusing on the stories of scientists from Hippocrates and Galen to Marie Curie and Einstein *A Little History of Science* traces the march of science through the centuries William Bynum opens a window on the exciting and unpredictable nature of scientific activity and describes the uproar that may ensue when scientific findings challenge established ideas With delightful illustrations and a warm accessible style this is a volume for young and old to treasure together **An Introduction to the History of Science** Walter Libby, 1917 **Science** Patricia Fara, 2009 *Science A Four*

Thousand Year History rewrites science's past. Instead of focussing on difficult experiments and abstract theories Patricia Fara shows how science has always belonged to the practical world of war, politics and business. Rather than glorifying scientists as idealized heroes she tells true stories about real people, men and some women who needed to earn their living, who made mistakes and who trampled down their rivals in their quest for success. Fara sweeps through the centuries from ancient Babylon right up to the latest hi-tech experiments in genetics and particle physics, illuminating the financial interests, imperial ambitions and publishing enterprises that have made science the powerful global phenomenon that it is today. She also ranges internationally illustrating the importance of scientific projects based around the world from China to the Islamic empire as well as the more familiar tale of science in Europe from Copernicus to Charles Darwin and beyond. Above all this four thousand year history challenges scientific supremacy, arguing controversially that science is successful not because it is always right but because people have said that it is right. *Isis P. Knowledge and Power William Burns, 2018-07-06

Knowledge and Power presents and explores science not as something specifically for scientists but as an integral part of human civilization and traces the development of science through different historical settings from the Middle Ages through to the Cold War. Five case studies are examined within this book: the creation of modern science by Muslims, Christians and Jews in the medieval Mediterranean; the global science of the Jesuit order in the early modern world; the relationship between modernization and westernization in Russia and Japan from the late seventeenth to the mid nineteenth century; the role of science in the European colonization of Africa; and the rivalry in big science between the United States and the Soviet Union during the Cold War. Each chapter includes original documents to further the reader's understanding and this second edition has been enhanced with a selection of new images and a new chapter on Big Science and the Superpowers during the Cold War. Since the Middle Ages people have been working in many civilizations and cultures to advance knowledge of and power over the

natural world Through a combination of narrative and primary sources Knowledge and Power provides students with an understanding of how different cultures throughout time and across the globe approached science It is ideal for students of world history and the history of science **Introduction to the History of Science** ,1953 Science and Technology in World History, Volume 3 David Deming,2014-01-10 This installment in a series on science and technology in world history begins in the fourteenth century explaining the origin and nature of scientific methodology and the relation of science to religion philosophy military history economics and technology Specific topics covered include the Black Death the Little Ice Age the invention of the printing press Martin Luther and the Reformation the birth of modern medicine the Copernican Revolution Galileo Kepler Isaac Newton and the Scientific Revolution *Philosophy, Science, and History* Lydia Patton,2014-06-27 *Philosophy Science and History A Guide and Reader* is a compact overview of the history and philosophy of science that aims to introduce students to the groundwork of the field and to stimulate innovative research The general introduction focuses on scientific theory change assessment discovery and pursuit Part I of the Reader begins with classic texts in the history of logical empiricism including Reichenbach s discovery justification distinction With careful reference to Kuhn s analysis of scientific revolutions the section provides key texts analyzing the relationship of HOPOS to the history of science including texts by Santayana Rudwick and Shapin and Schaffer Part II provides texts illuminating central debates in the history of science and its philosophy These include the history of natural philosophy Descartes Newton Leibniz Kant Hume and du Ch telet in a new translation induction and the logic of discovery including the Mill Whewell debate Duhem and Hanson and catastrophism versus uniformitarianism in natural history Playfair on Hutton and Lyell de Buffon Cuvier and Darwin The editor s introductions to each section provide a broader perspective informed by contemporary research in each area including related topics Each introduction furnishes proposals including thematic bibliographies for innovative research questions and projects in the classroom and in the field *An Introduction to the History of Science* Walter Libby,James Zimmerhoff,2017-07-13 It is only by teaching the sciences in their historical development that the schools can be true to the two principles of modern education that the sciences should occupy the foremost place in the curriculum and that the individual mind in its evolution should rehearse the history of civilization The history of science should be given a larger place than at present in general history for as Bacon said the history of the world without a history of learning is like a statue of Polyphemus with the eye out The history of science studies the past for the sake of the future It is a story of continuous progress It is rich in biographical material It shows the sciences in their interrelations and saves the student from narrowness and premature specialization It affords a unique approach to the study of philosophy It gives new motive to the study of foreign languages It gives an interest in the applications of knowledge offers a clue to the complex civilization of the present and renders the mind hospitable to new discoveries and inventions The history of science is hostile to the spirit of caste It shows the sciences rising from daily needs and occupations formulated by philosophy enriching philosophy giving

rise to new industries which react in turn upon the sciences The history of science reveals men of all grades of intelligence and of all social ranks cooperating in the cause of human progress It is a basis of intellectual and social homogeneity Science is international English Germans French Italians Russians all nations contributing to advance the general interests Accordingly a survey of the sciences tends to increase mutual respect and to heighten the humanitarian sentiment The history of science can be taught to people of all creeds and colors and cannot fail to enhance in the breast of every young man or woman faith in human progress and good will to all mankind This book is intended as a simple introduction taking advantage of the interests of youth of from seventeen to twenty two years of age and their intellectual compeers in order to direct their attention to the story of the development of the sciences It makes no claim to be in any sense complete or comprehensive It is therefore a psychological introduction having the mental capacity of a certain class of readers always in view rather than a logical introduction which would presuppose in all readers both full maturity of intellect and considerable initial interest in the history of science I cannot conclude this preface without thanking those who have assisted me in the preparation of this book Sir William Osler who read the first draft of the manuscript and aided me with his counsel Dr Charles Singer who read all the chapters in manuscript and to whom I am indebted for advice in reference to the illustrations and for many other valuable suggestions the officers of the Bodleian Library whose courtesy was unfailing during the year I worked there Professor Henry Crew who helped in the revision of two of the chapters by his judicious criticism Professor J E Rush whose knowledge of bacteriology improved the chapter on Pasteur Professor L O Grondahl who read one of the chapters relating to the history of physics and suggested important emendations and Dr John A Brashear who contributed valuable information in reference to the activities of Samuel Pierpont Langley I wish to express my gratitude also to Miss Florence Bonnet for aid in the correction of the manuscript

The Invention of Science David Wootton, 2015-12-08 This fantastic revisionist history captures the excitement of the scientific revolution and makes a point of celebrating the advances it ushered in Financial Times We live in a world transformed by scientific discovery In *The Invention of Science* historian David Wootton reveals why the Scientific Revolution was truly the greatest event in our history Spanning continents and centuries Wootton chronicles the factors that led to this crucial transformation and the fascinating people who made it happen Wootton argues that the Scientific Revolution was actually

five separate yet concurrent events that merged to create a new worldview Here are the brilliant iconoclasts Galileo Copernicus Brahe Newton and many more curious minds from across Europe whose studies of the natural world challenged centuries of religious orthodoxy and ingrained superstition From gunpowder technology the discovery of the new world movable type printing perspective painting and the telescope to the practice of conducting experiments the laws of nature and the concept of the fact Wootton shows how these discoveries codified into a social construct and a system of knowledge Ultimately he makes clear the link between scientific discovery and the rise of industrialization and the birth of the modern world we know
