Re-visioning Science Education from Feminist Perspectives, 2010-01-01 Women in science education are placed in a juxtaposition of gender roles and gendered career roles Using auto biography and auto ethnography this book examines the challenges and choices of academic women in science education and how those challenges have changed or remained consistent since women have become a presence in science education The book's contributors span a temporal and spatial continuum and focus on how a variety of issues relate to the paradoxes for academic women in science education Science is characterized as a masculine endeavor while teaching is described as women's true profession Thus female academics involved in science education are positioned in two paradoxes First as teachers they are involved in a feminized profession However within that profession women faculty in science education work in a discipline viewed as a masculine enterprise Further these women work in educational institutions that have higher status and prestige than their sisters in elementary middle or high schools Second female professors are bearded mothers Women who have engaged in science education value rationality and logic and assume authority as participants in academe The use of logic the acceptance of authority and the assumption of power are masculine gender stereotyped characteristics This situation places women in a paradox because others including peers and students expect them to display stereotypic female gender dispositions such as mothering nurturing sacrificing their needs for others and a commitment to the institution The topics include discussing how their engagement with science impacted their career trajectories and re-direction from science to science education the relationships of cultural and racial factors on career trajectories and the dialectical relationship between women's private public lives and their agency collective and individual in the academy and its enactment within academic fields The book documents the lives and careers of academic women in science education from the United States Australia the Caribbean United Kingdom and Europe

Quality Research in Literacy and Science Education Mack C. Shelley, Larry D. Yore, Brian B. Hand, 2008-12-30 Statistical models attempt to describe and quantify relationships between variables In the models presented in this chapter there is a response variable sometimes called dependent variable and at least one predictor variable sometimes called independent or explanatory variable When investigating a possible cause and effect type of relationship the response variable is the putative effect and the predictors are the hypothesized causes Typically there is a main predictor variable of interest other predictors in the model are called covariates Unknown covariates or other independent variables not controlled in an experiment or analysis can affect the dependent or outcome variable and mislead the conclusions made from the inquiry Bock Velleman given the model p is the probability that a relationship is seen by mere chance The smaller the p value the more confident we can be that the pattern seen in the data is not random In the type of models examined here the R measures the proportion of the variation in the response variable that

is explained by the predictors 2 specified in the model if R is close to 1 then almost all the variation in the response variable has been explained This measure is also known as the multiple correlation coefficient Statistical studies can be grouped into two types experimental and observational

Designing for Situated

Knowledge Transformation Nina Bonderup Dohn, Stig Børsen Hansen, Jens Jørgen Hansen, 2019-11-27 How can knowledge developed in one context be put to use in other contexts How can students learn to do so How can educators design for learning this These are fundamental challenges to many forms of education The challenges are amplified in contemporary society where people traverse many different contexts and where contexts themselves are continuously changing Designing for Situated Knowledge Transformation provides a structured answer to these questions through an investigation of the theoretical empirical methodological and pedagogical design aspects which they involve Raising profound questions about the nature of knowledge of situativity and of transfer transformation and resituation it calls for and provides extended empirical studies of the forms of transformation that knowledge undergoes when people find themselves in new contexts while relying on existing knowledge Considering many avenues of practical application and insight Designing for Situated Knowledge Transformation develops a coherent framework for developing learning designs for knowledge transformation that is crucial in today s educational settings

Human Factors of a Global Society

Tadeusz Marek, Waldemar Karwowski, Marek Frankowicz, Jussi Kantola, Pavel Zgaga, 2014-06-02 During the last 60 years the discipline of human factors HF has evolved alongside progress in engineering technology and business Contemporary HF is clearly shifting towards addressing the human centered design paradigm for much larger and complex societal systems the effectiveness of which is affected by recent advances in engineering science and education Human Factors of a Global Society A System of Systems Perspective explores the future challenges and potential contributions of the human factors discipline in the Conceptual Age of human creativity and social responsibility Written by a team of experts and pioneers this book examines the human aspects related to contemporary societal developments in science engineering and higher education in the context of unprecedented progress in those areas It also discusses new paradigms for higher education including education delivery

and administration from a systems of systems perspective It then examines the future challenges and potential contributions of the human factors discipline While there are other books that focus on systems engineering or on a specific area of human factors this book unifies these different perspectives into a holistic point of view It gives you an understanding of human factors as it relates to the global enterprise system and its newly emerging characteristics such as quality system complexity evolving management system and its role in social and behavioral changes By exploring the human aspects related to actual societal developments in science the book opens a new horizon for the HF community
