**Handbook for the Historiography of Science** Mauro L. Condé,Marlon Salomon,2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the

historiography of science as a mere description or record of the history of science. Instead, they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts. In other words, more than describing the record of the various possibilities of historiographical approaches to science, the chapters carry out an epistemological reflection to assess the bases, possibilities, scope, and limits of different historiographical conceptions, authors, and traditions that have established the writing of the history of science. This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science, be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science.

**Transformative Science Education** Kevin J. Pugh, 2020. Use this book to move science learning out of the classroom and into everyday life. Science has a profound capacity to transform how we experience the world, but it can be challenging to foster transformative experiences. When it comes to the science classroom, too often the Las Vegas slogan applies: What happens here stays here. Based on over 20 years of research, this guide presents the Teaching for Transformative Experiences in Science instructional model to help teachers craft practices that will encourage students to apply science concepts beyond defined school boundaries. This practical resource includes detailed vignettes, classroom examples, guidance for trying out strategies, and materials for assessing transformative experiences.

**Book Features:**

- Introduction to transformative experience theory
- A model of teaching based on empirical classroom research
- Vignettes and classroom examples that illustrate application of the model
- Strategies Try It Out guides
- Assessment materials
- Changing how students experience science can change more than their understanding of science. It can change the world.

From the Foreword by Gale M. Sinatra, USC Rossier School of Education

**Active Learning in College Science** Joel J. Mintzes, Emily M. Walter, 2020-02-23. This book explores evidence-based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book, we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4-year liberal arts institutions, comprehensive regional campuses, and flagship research universities. In keeping with Wieman's challenge, our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on Constructivist Learning Theory, Section I, the practices we explore are Eliciting Ideas and Encouraging

Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for

**Why We Teach Science (and why We Should)** John L. Rudolph, 2023 In *Why We Teach Science and Why We Should* former high school teacher and historian of science education John L. Rudolph examines the reasons we've long given for teaching science and assesses how they hold up to what we know about what students really learn

*Science and Narratives of Nature* Sundar Sarukkai, 2017-07-05 The discourse and practice of science are deeply connected to explicit and implicit narratives of nature However nature has been understood in diverse ways by cultures across the world Could these different views of nature generate the possibility of alternate views on science Part of the innovative series *Science and Technology Studies* this volume looks at different conceptualizations of nature and the manner in which they structure the practice of the sciences The essays draw upon philosophy history sociology religion feminism mathematics and cultural studies and establish a dialogue between cultures through a multi-disciplinary exploration of science With contributions from major scholars in the field this volume will deeply interest scholars and students of science and technology studies sociology history and philosophy of science as also environmental studies

Readings in Science ,1842      The Social Context Of Soviet Science Linda L Lubrano,Susan Gross Solomon,2019-06-13

From its very beginnings Western scholarly writing on Soviet science has been largely contextual in orientation with particular attention given to the institutional and political setting of science in Russian and Soviet history This book moves that tradition in a new direction by focusing more closely on the social conditions of the research process      *Colliding Worlds: How Cutting-Edge Science Is Redefining Contemporary Art* Arthur I. Miller,2014-06-16 A dazzling look at the artists working on the frontiers of science In recent decades an exciting new art movement has emerged in which artists utilize and illuminate the latest advances in science Some of their provocative creations a live rabbit implanted with the fluorescent gene of a jellyfish a gigantic glass and chrome sculpture of the Big Bang pictured on the cover can be seen in traditional art museums and magazines while others are being made by leading designers at Pixar Google s Creative Lab and the MIT Media Lab In *Colliding Worlds* Arthur I Miller takes readers on a wild journey to explore this new frontier Miller the author of *Einstein Picasso* and other celebrated books on science and creativity traces the movement from its seeds a century ago when Einstein s theory of relativity helped shape the thinking of the Cubists to its flowering today Through interviews with innovative thinkers and artists across disciplines Miller shows with verve and clarity how discoveries in biotechnology cosmology quantum physics and beyond are animating the work of designers like Neri Oxman musicians like David Toop and the artists in residence at CERN s Large Hadron Collider From NanoArt to Big Data Miller reveals the extraordinary possibilities when art and science collide
