Trafton, 2015-07-12 Excerpt from The Teaching of Science in the Elementary School That we as a nation shall need to pay greater attention to instruction in science after the Great War than we did before it now seems certain The call for men trained along scientific lines for work in the fields and in the shops will inevitably be more insistent than any we have previously known Research too along scientific lines seems certain to be cared for in a new way and to be greatly extended in scope Our leaders now see clearly that if this nation is to hold its proper place in the life of the world it must become to a much greater extent than ever before a scientific nation To become a scientific nation however just as to become an artistic or a literary or a moral or a practical or an economical nation demands that the masses be trained in the elements of these things for from the many the great leaders must be drawn This involves not only good instruction in the universities and secondary schools for those possessing special aptitudes but general instruction in the elementary schools that the many may have any latent possibilities awakened and may also be brought into sympathetic appreciation with the new turn it is desired that our national life should take Science instruction or the awakening during childhood of an intelligent interest in the world of nature which lies all about us has an important educational as well as a practical value To become trained to observe plant and animal life and the phenomena of the universe accurately and appreciatively is a great educational asset About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com

Teaching Science in the Elementary School Donna M. Wolfinger, 1984-01-01 **Science for All Children** Center for Science, Mathematics, and Engineering Education, National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution, 1997-01-22

Remember the first time you planted a seed and watched it sprout. Or explored how a magnet attracted a nail. If these questions bring back memories of joy and wonder, then you understand the idea behind inquiry-based science, an approach to science education that challenges children to ask questions, solve problems, and develop scientific skills as well as gain knowledge. Inquiry-based science is based on research and experience, both of which confirm that children learn science best when they engage in hands-on science activities rather than read from a textbook. The recent National Science Education Standards prepared by the National Research Council call for a revolution in science education. They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade starting in kindergarten. This easy-to-read and practical book shows how to bring about the changes recommended in the standards. It provides guidelines for planning and implementing an inquiry-based science program in any school district. The book is divided into three parts. Building a Foundation for Change presents a rationale for inquiry-based science and describes how teaching through inquiry supports the way children naturally learn. It concludes with basic guidelines for planning a program. School administrators, teachers, and parents will be especially interested in the second part, The Nuts and Bolts of Change. This section describes the five building blocks of an elementary science program: Community and administrative support, A developmentally appropriate curriculum, Opportunities for professional development, Materials support, and Appropriate assessment tools. Together, these five elements provide a working model of how to implement hands-on science. The third part, Inquiry-Centered Science in Practice, presents profiles of the successful inquiry-based science programs in districts nationwide. These profiles show how the principles of hands-on science can be adapted to different school settings. If you want to improve the way science is taught in the elementary schools in your community, *Science for All Children* is an indispensable resource.
