Science History And Social Activism:

Science, History and Social Activism Garland E. Allen, Roy M. MacLeod, 2013-03-14 To earn a degree every doctoral candidate should go out to Harvard Square find an audience and explain his or her dissertation Everett Mendelsohn's worldly advice to successive generations of students whether apocryphal or real has for over forty years spoken both to the essence of his scholarship and to the role of the scholar Possibly no one has done more to establish the history of the life sciences as a recognized university discipline in the United States and to inspire a critical concern for the ways in which science and technology operate as central features of Western society This book is both an act of homage and of commemoration to Professor Mendelsohn on his 70th birthday As befits its subject the work it presents is original comparative wide ranging and new Since 1960 Everett Mendelsohn has been identified with Harvard University and with its Department of the History of Science Those that know him as a teacher will also know him as a scholar In 1968 he began and after 30 years has just bequeathed to others the editorship of the *Journal of the History of Biology* among the earliest and one of the most important publications in its field At the same time he has been a pioneer in the social history and sociology of science He has formed particularly close working relationships with colleagues in Sweden and Germany as witnessed by his editorial presence in the *Sociology of Science Yearbook*

Science Studies during the Cold War and Beyond Elena Aronova, Simone Turchetti, 2016-09-24 This book examines the ways in which studies of science intertwined with Cold War politics in both familiar and less familiar battlefields of the Cold War Taken together the essays highlight two primary roles for science studies as a new field of expertise institutionalized during the Cold War in different political regimes Firstly science studies played a political role in cultural Cold War in sustaining as well as destabilizing political ideologies in different political and national contexts Secondly it was an instrument of science policies in the early Cold War the studies of science were promoted as the underpinning for the national policies framed with regard to both global geopolitics and local national priorities As this book demonstrates however the wider we cast our net extending our histories beyond the more researched developments in the Anglophone West the more complex and ambivalent both the science studies and the Cold War become outside these more familiar spaces The national stories collected in this book may appear incommensurable with what we know as science studies today but these stories present a vantage point from which to pluralize some of the visions that were constitutive to the construction of Cold War as a juxtaposition of the liberal democracies in the West and the communist East

Students, Markets and Social Justice Hubert Ertl, Claire Dupuy, 2014-05-12 This volume examines tuition fees as the most prominent and most visible trend among higher education policies that embodies recent neoliberal trends in the policy area of education Tuition fee policies and the accompanying provisions for student support illustrate the contemporary tensions between marketisation and social justice Among the major transformations higher education systems have undergone in the last two decades the emergence of marketisation and in particular the introduction of tuition fees have received a lot of attention In Europe these trends seemingly break with a long dominant representation of higher education as a public good which has been at the centre of the process of massification of higher education access in most European countries since the 1960s Against this background the volume examines recent changes in tuition fee policies in a number of western European countries Canada the United States and China and investigates the impacts of these changes on access to higher education There are two main contributions the volume makes first it provides an overview of recent reforms in a comparative perspective including a diverse range of national contexts second it elaborates a systematic analysis of tuition fee policies rationales instruments and outcomes in terms of access to higher education The volume argues that tuition fee policies provide fruitful grounds to explore the variety of neoliberal trends in higher education that is how marketisation and concerns regarding social justice are intertwined in contemporary higher education systems

The Reception of the Galilean Science of Motion in Seventeenth-Century Europe Carla Rita Palmerino, J.M.M.H. Thijssen, 2004-08-31 This book collects contributions by some of the leading scholars working on seventeenth century mechanics and the mechanical philosophy Together the articles provide a broad and accurate picture of the fortune of Galileo's theory of motion in Europe and of the various physical mathematical and ontological arguments that were used in favour and against it Were Galileo's contemporaries really aware of what Westfall has described as the incompatibility between the demands of mathematical mechanics and the needs of mechanical philosophy To what extent did

Galileo's silence concerning the cause of free fall impeded the acceptance of his theory of motion. Which methods were used before the invention of the infinitesimal calculus to check the validity of Galileo's laws of free fall and of parabolic motion? And what sort of experiments were invoked in favour or against these laws? These and related questions are addressed in this volume.

Rethinking Scientific Change and Theory Comparison: Léna Soler, H. Sankey, Paul

Hoyningen-Huene, 2008-05-29. L. NA SOLER. This volume is a collection of essays devoted to the analysis of scientific change and stability. It represents the most recent thinking on the topic of incommensurability and scientific theory change. It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other. And it discusses some central epistemological consequences regarding the nature of scientific progress, rationality and realism. With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists. The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'évaluation comparative des théories scientifiques: stabilité, ruptures, incommensurabilités* organized by Léna Soler and Paul Hoyningen Huene at the University of Nancy, France, in June 2004. Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments. The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science, historians of science and scientists who come from different traditions and endorse opposing commitments. I hope that this is evident in the book too and that it will constitute one of its attractions.

The Oxford Handbook of Social Psychology and Social Justice Phillip L. Hammack, 2018. The Oxford Handbook of Social Psychology and Social Justice spans cultures and disciplines to highlight critical paradigms and practices for the study of social injustice in diverse contexts. This book addresses injustice along such lines as race, ethnicity, gender, sexual identity and social class. It also addresses pressing issues of globalization, conflict, intervention and social policy.

Race, Poverty, and Social Justice José Z. Calderón, 2023-07-03. This volume explores multiple examples of how to connect classrooms to communities through service learning and participatory research to teach issues of social justice. The various chapters provide examples of how collaborations between students, faculty and community partners are creating models of democratic spaces on campus and off campus where the students are teachers and the teachers are students. The purpose of this volume is to provide examples of how service learning can be integrated into courses addressing social justice issues. At the same time it is about demonstrating the power of service learning in advancing a course content that is community based and socially engaged. To stimulate the adaptation of the approaches described in these books, each volume includes an Activity Methodology table that summarizes key elements of each example such as class size, pedagogy and other disciplinary applications. Public Health and Social Justice in the Age of Chadwick Christopher Hamlin, 1998-02-13 A revisionist account of the story of the foundations of public health in industrial revolution Britain

Observation and Experiment in the Natural and Social Sciences Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convicted that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation

History of Science, History of Text Karine Chemla, 2005-08-01 two main interacting ways They constitute that with which exploration into problems or questions is carried out But they also constitute that which is exchanged between scholars or in other terms that which is

shaped by one or by some for use by others In these various dimensions texts obviously depend on the means and technologies available for producing reproducing using and organizing writings In this regard the contribution of a history of text is essential in helping us approach the various historical contexts from which our sources originate However there is more to it While shaping texts as texts the practitioners of the sciences may create new textual resources that intimately relate to the research carried on One may think for instance of the process of introduction of formulas in mathematical texts This aspect opens up a whole range of extremely interesting questions to which we will return at a later point But practitioners of the sciences also rely on texts produced by themselves or others which they bring into play in various ways More generally they make use of textual resources of every kind that is available to them reshaping them restricting or enlarging them Among these one can think of ways of naming syntax of statements or grammatical analysis literary techniques modes of shaping texts or parts of text genres of text and so on In this sense the practitioners depend on and draw on the textual cultures available to the social and professional groups to which they belong

Rethinking Explanation Johannes Persson, Petri Ylikoski, 2007-05-16 This volume is a product of the international research project Theory of Explanation which was funded by the Joint Committee for Nordic Research Councils for the Humanities and the Social Sciences NOS HS The project started in 2001 and operated for a period of three years by organizing a number of workshops on scientific explanation in Norway Iceland Sweden and Finland The workshops included presentations by people involved in the project and by invited guests Both groups are represented in this volume which brings together some of the papers presented in these meetings The central theme of the research project was scientific explanation but it was approached from many different angles This plurality of approaches is also visible in the present volume The authors share a joint interest in explanation but not the same theoretical or methodological assumptions As a whole this volume shows that although the theory of explanation has been a major industry within philosophy of science there are still both conceptual problems to be solved and fresh philosophical ideas to explore The papers in this volume have been divided into two broad groups Part 1 consists of papers dealing with general issues in the theory of explanation while the papers in Part 2 focus on some more specific problems Part 1 Theory of Explanation
