A People's History of

Science Clifford D Conner,2009-04-24 We all know the history of science that we learned from grade school textbooks How Galileo used his telescope to show that the earth was not the center of the universe how Newton divined gravity from the falling apple how Einstein unlocked the mysteries of time and space with a simple equation This history is made up of long periods of ignorance and confusion punctuated once an age by a brilliant thinker who puts it all together These few tower over the ordinary mass of people and in the traditional account it is to them that we owe science in its entirety This belief is wrong A People s History of Science shows how ordinary people participate in creating science and have done so throughout history It documents how the development of science has affected ordinary people and how ordinary people perceived that development It would be wrong to claim that the formulation of quantum theory or the structure of DNA can be credited directly to artisans or peasants but if modern science is likened to a skyscraper then those twentieth century triumphs are the sophisticated filigrees at its pinnacle that are supported by the massive foundation created by the rest of us **Science and Civilisation in China, Part 13, Mining** Peter J. Golas,1999-02-25 The fifth volume of Dr Needham s immense undertaking covers the subjects of chemistry and chemical technology This the thirteenth part of the volume is the first history of Chinese mining to appear in a western language Covering from the Neolithic period to the present day it deals with the full range of Chinese mining from copper to mercury arsenic to coal and a large number of other minerals and materials The author draws extensively not only on written sources but also on archaeological remains and observation of traditional techniques still in use The interrelationship between Chinese mining and the social economic and political conditions in which it took place is examined and leads the author to conclude that these extraneous factors were probably more important in determining how mining was carried out than technological progress **Science and Technology in World History** James Edward McClellan,Harold Dorn,2006-04-14 Publisher description **Science and Technology in Modern China, 1880s-1940s** ,2014-02-20 The first of its kind this collection of critical essays opens up new venues in the comparative study of science and culture by focusing on the formative decades of modern China in the late nineteenth and first half of the twentieth century It provides a wide ranging examination of the cultural and intellectual history of science and technology in modern China From anti imperialism to the technology of Chinese writing the commodification of novelties to the rise of the modern professional scientist new lexica and appropriations of the past the contributors map out a transregional and global circuitry of modern knowledge and practical know how nationalism and the amalgamation of new social practices Contributors include Iwo Amelung Fa ti Fan Shen Guowei Danian Hu Joachim Kurtz Eugenia Lean Thomas S Mullaney Hugh Shapiro Grace Shen and Jing Tsu **Public Health and the Modernization of China, 1865-2015** Liping Bu,2017-07-14

This book based on extensive original research traces the development of China's public health system showing how advances in public health have been an integral part of China's rise. It outlines the phenomenal improvements in public health for example the increase in life expectancy from 38 in 1949 to 73 in 2010 relates developments in public health to prevailing political ideologies and discusses how the drivers of health improvements were unlike in the West modern medical professionals and intellectuals who understood that whatever the prevailing ideology China needs to be a strong country. The book explores how public health concepts policies programmes institutions and practices changed and developed through social and political upheavals war and famine and argues that this perspective of China's development is refreshingly different from China's development viewed purely in political terms.

Creational Theology and the History of Physical Science: The Creationist Tradition from Basil to Bohr Christopher B. Kaiser, 2021-12-06 This volume documents the role of creational theology in discussions of natural philosophy medicine and technology from the Hellenistic period to the early twentieth century. Four principal themes are the comprehensibility of the world the unity of heaven and earth the relative autonomy of nature and the ministry of healing. Successive chapters focus on Greco-Roman science medieval Aristotelianism early modern science the heritage of Isaac Newton and post-Newtonian mechanics. The volume will interest historians of science and historians of the idea of creation. It simultaneously details the persistence of tradition and the emergence of modernity and provides the historical background for later discussions of creation and evolution.

Reader's Guide to the History of Science Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact. The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn.

Questioning Science in East Asian Contexts Yung Sik Kim, 2014-01-16 Questioning Science in East Asian Contexts brings together twelve essays written by Yung Sik Kim addressing various questions about the social and cultural contexts of science in East Asia. Most of the essays deal with the relationship between science and Confucianism especially the roles that Confucian thought values and institutions have on the development of science. Kim shows that this relationship is very

complex and multifaceted and cannot be dealt with in a simplistic manner Kim offers comparative perspectives and discusses the problems of intercultural comparisons he demonstrates that in spite of the potential dangers that accompany these comparisons they should be made nonetheless as they allow for a better understanding of the situation in East Asia

Science and Civilisation in China: Volume 7, The Social Background, Part 2, General Conclusions and Reflections Joseph Needham, 2004-07-22 It would be difficult to overstate the importance of Joseph Needham's *Science and Civilisation in China* series For nearly fifty years Needham and his collaborators have revealed the ideals concepts and achievements of China's scientific and technological traditions from the earliest times to about 1800 through this great enterprise During his long working lifetime Needham kept in draft various essays some written with collaborators in which he set out his broad views on the Chinese social and historical context These essays edited by one of his closest collaborators Kenneth Robinson are contained in the present volume A reading of this material makes it possible to reconstruct the assumptions and problematics that underpinned and drove the Needham project throughout the nearly one half century during which he was at the helm The documents gathered here reveal the intellectual foundations of one of the greatest scholarly enterprises of the twentieth century

Science and Technology in Post-Mao China Denis Fred Simon, Merle Goldman, 2020-10-26 Along with the political and economic reforms that have characterized the post Mao era in China there has been a potentially revolutionary change in Chinese science and technology Here sixteen scholars examine various facets of the current science and technology scene comparing it with the past and speculating about future trends Two chapters dealing with science under the Nationalists and under Mao are followed by a section of extensive analysis of reforms under Deng Xiaoping focusing on the organizational system the use of human resources and the emerging response to market forces Chapters dealing with changes in medical care agriculture and military research and development demonstrate how these reforms have affected specific areas during the Chinese shift away from Party orthodoxy and Maoist populism toward professional expertise as the guiding principle in science and technology Three further chapters deal with China's interface with the world at large in the process of technology transfer Both the introductory and concluding chapters describe the tension between the Chinese Communist Party structure with its inclinations toward strict vertical control and the scientific and technological community's need for a free flow of information across organizational disciplinary and national boundaries

Science and Dissent in Post-Mao China H. Lyman Miller, 1996 When in 1989 Chinese astrophysicist Fang Lizhi sought asylum for months in the U S Embassy in Beijing later escaping to the West worldwide attention focused on the plight of liberal intellectuals in China In *Science and Dissent in Post Mao China* H Lyman Miller examines the scientific community in China and prominent members such as Fang and physicist and historian of science Xu Liangying Drawing on Chinese academic journals newspapers interviews and correspondence with Chinese scientists he considers the evolution of China's science policy and its impact on China's scientific community He illuminates the professional and humanistic values that impelled scientific intellectuals on

their course toward open liberal political dissent It is ironic that scientific dissidence in China arose in opposition to a regime supportive of and initially supported by scientists In the late 1970s scientists were called upon to help implement reforms orchestrated by Deng Xiaoping's regime which attached a high priority to science and technology The regime worked to rebuild China's civilian science community and sought to enhance the standing of scientists while at the same time it continued to oppose political pluralism and suppress dissidence The political philosophy of revolutionary China has taught generations of scientists that explanation of the entire natural world from subatomic particles to galaxies falls under the jurisdiction of natural dialectics a branch of Marxism Leninism Escalating debates in the 1980s questioned the relationship of Marxism to science and led some to positions of open political dissent At issue were the autonomy of China's scientific community and the conduct of science as well as the validity and jurisdiction of Marxist Leninist philosophy and hence the fundamental legitimacy of the political system itself Miller concludes that the emergence of a renewed liberal voice in China in the 1980s was in significant part an extension into politics of what some scientists believed to be the norms of healthy science scientific dissidence was an unintended but natural consequence of the Deng regime's reforms This thoughtful study of science as a powerful belief system and as a source of political and social values in contemporary China will appeal to a diverse audience including readers interested in Chinese politics and society comparative politics communist regimes the political sociology of science and the history of ideas

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 2013-11-11

The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa
