Cotgrove, Steven Box, 1970

**The Sociology of Science** Robert K. Merton, 1973 The exploration of the social conditions that facilitate or retard the search for scientific knowledge has been the major theme of Robert K Merton's work for forty years This collection of papers is a fascinating overview of this sustained inquiry There are very few other books in sociology with such meticulous scholarship or so elegant a style This collection of papers is and is likely to remain for a long time one of the most important books in sociology Joseph Ben David New York Times Book Review The novelty of the approach the erudition and elegance and the unusual breadth of vision make this volume one of the most important contributions to sociology in general and to the sociology of science in particular Merton's *Sociology of Science* is a magisterial summary of the field Yehuda Elkana American Journal of Sociology Merton's work provides a rich feast for any scientist concerned for a genuine understanding of his own professional self And Merton's industry integrity and humility are permanent witnesses to that ethos which he has done so much to define and support J R Ravetz American Scientist The essays not only exhibit a diverse and penetrating analysis and a deal of historical and contemporary examples with concrete numerical data but also make genuinely good reading because of the wit the liveliness and the rich learning with which Merton writes Philip Morrison Scientific American Merton's impact on sociology as a whole has been large and his impact on the sociology of science has been so momentous that the title of the book is apt because Merton's writings represent modern sociology of science more than any other single writer Richard McClintock Contemporary Sociology

**The International Yearbook of Organization Studies 1981 (RLE: Organizations)** David Dunkerley, Graeme Salaman, 2013-05-02 The diverse topics in this volume bring together developments in the field of organization studies Although the approaches are by no means undifferentiated the articles share a commitment to a revitalized organizational analysis an historically based analysis and one which attempts to understand the structure and impact of organizations in terms of the location of these organizations within structure of class and power

**The Scientific Life** Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people The Scientific Life is historian Steven Shapin's story about who scientists are who we think they

are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin's last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims *The Scientific Life* is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped      **AEC Research and Development Report** Atomic Energy Commission,1971      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1965

**Reconsideration of Science and Technology II** Liu Dachun,Ai Zhiqiang,Yang Huili,2022-09-30 In reviewing and reconsidering the intellectual history of scientism and antiscientism the authors assess the process of reasoning and prejudices of these contrasting viewpoints while discussing the repercussions of scientific hegemony and its contemporary criticism As the second volume of a three volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever changing world this title focuses on ideological trends centering around scientism and anti scientism since the 19th century The six chapters look into the emergence of scientism instrumental reason scientific optimism scientific pessimism scientific crisis and irrationalism and finally the deconstruction of scientism The authors provide insight into the connections and biases of these disparate views and critiques explore the influences of the hegemony of science and contemporary critique of science and evaluate the value of postmodernism and deconstructivism The volume will appeal to scholars and students interested in the philosophy of science and technology the ideology of scientism and anti scientism modernism and postmodernism Marxist philosophy and topics related to scientific culture      *The Madame Curie Complex* Julie Des Jardins,2010-10-06 Why are the fields of science and technology still considered to be predominantly male professions The Madame Curie Complex moves beyond the most common explanations limited access to professional training lack of resources exclusion from social networks of men to give historical context and unexpected revelations about women's contributions to the sciences Exploring the lives of Jane Goodall Rosalind Franklin Rosalyn Yalow Barbara McClintock Rachel Carson and the women of the Manhattan Project Julie Des Jardins considers their personal and professional stories in relation to their male counterparts Albert Einstein Robert Oppenheimer Enrico Fermi to demonstrate how the gendered culture of science molds the methods structure and experience of the work With lively

anecdotes and vivid detail The Madame Curie Complex reveals how women scientists have often asked different questions used different methods come up with different explanations for phenomena in the natural world and how they have forever transformed a scientist's role
