The Bovine Scourge Keir Waddington, 2006 Investigation of the complex issues surrounding the links

between bovine tuberculosis and infected meat with a contemporary resonance in the BSE scare By the late 1890s the question of bovine tuberculosis TB and infected meat had become one of national importance reflecting a national sense of fear Although the extent of the threat to health proved uncertain bovine TB had come to stand at the centre of debates about diseased meat and public health The anxiety it caused was part of a longer story linked to concern over food safety changes in how tuberculosis was understood and to worries over diseased meat and the evils of the urban meat trade The Bovine Scourge explores the debates and fears that came to surround bovine TB meat and public health between the 1860s and 1914 It traces how diseased meat and bovine TB emerged as a public health issue examines the measures adopted to protect the public and addresses how by the Edwardian era milk had become the major source of concern in discussion of bovine TB It also raises important questions about the history of food safety the concerns generated by diseased meat and the role of the public health and veterinary profession in preventing the sale of contaminated food KEIR WADDINGTON is a senior lecturer in the School of History and Archaeology at Cardiff University *Embargoed Science* Vincent Kiernan, 2023-12-11 The popular notion of a lone scientist privately toiling long hours in a laboratory striking upon a great discovery and announcing it to the world is a romanticized fiction Vincent Kiernan's *Embargoed Science* reveals the true process behind science news an elite few scholarly journals control press coverage through a mechanism known as an embargo The journals distribute advance copies of their articles to hundreds and sometimes thousands of journalists around the world on the condition that journalists agree not to report their stories until a common time several days later When the embargo lifts airwaves and newspaper pages are flooded with stories based on the journal's latest issue In addition to divulging the realities behind this collusive practice Kiernan offers an unprecedented exploration of the embargo's impact on public and academic knowledge of science and medical issues He surveys twenty five daily U S newspapers and relates his in depth interviews with reporters to examine the inner workings of the embargo and how it structures our understanding of news about science Kiernan ultimately argues that this system fosters pack journalism and creates an unhealthy shield against journalistic competition The result is the uncritical reporting of science and medical news according to the dictates of a few key sources **The Complete Book of Personal Training** Douglas Brooks, 2004 This book is the most comprehensive and authoritative resource for you as a personal trainer whether you are a newcomer to the field or have a well established business The book is truly a complete resource it's full of information about working with clients and designing programs and it's a practical guide to all aspects of the personal training business It will help you in all aspects of your profession learn applicable information on fitness testing and assessment identify your clients goals and create fitness tests specifically for them learn how to develop cardiovascular strength and flexibility training programs properly train and help special populations understand the business side of personal training including marketing yourself as a trainer getting and retaining clients and learning time management learn how to expand your business back cover *Instrumentation Between Science,*

State and Industry B. Joerges, T. Shinn, 2012-12-06 In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultra centrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more familiar The instrument systems developed by research technologists strike us as especially general open ended and flexible When tailored effectively research technology instruments potentially fit into many niches and serve a host of unrelated applications Their multi functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science Research technology activities link universities industry public and private research or metrology establishments instrument making firms consulting companies the military and metrological agencies Research technology practitioners do not follow the career path of the traditional academic or engineering professional

When Science Offers Salvation Rebecca Dresser, 2001-03-22 Biomedical research today has a high public profile largely because of patient advocacy Following in the footsteps of HIV AIDS activists advocates representing an array of patient groups are now vocal partners in the research enterprise Advocates want research practices and policies to be more responsive to the people who must live with the burdens of illness This book shows how advocates have transformed health research often but not always for the better Dresser is the first to examine patient advocacy through the lens of research ethics She reveals the many ways in which a quest for cures and improved therapies shapes advocacy work She exposes the

bright and dark sides of patients expanded opportunities to enroll in clinical trials and join researchers in planning and evaluating studies She considers the virtues and drawbacks of giving patients more influence over how the government invests its research dollars She argues that advocates should do more to promote ethical human studies and responsible media reporting about research Patient advocates can help make research more ethical but advocacy raises ethical issues of its own This book clearly and vividly recounts the advocacy contribution to research and explores the thorny ethical issues facing research advocates
