Science Of Hard Materials:

Science of Hard Materials R. Viswanadham, 2012-12-12 This volume contains the proceedings of the first International Conference on the Science of Hard Materials held in Moran Wyoming Aug 23 28 1981 The objective of the conference was to review and advance the state of knowledge of the basic physical and chemical properties of hard materials and show how these properties influence performance in a variety of applications To this end the 49 contributed papers and the four keynote papers by Prof Fischmeister and Drs Hintermann Exner and Almond present an excellent overview of the state of the art in the science of hard materials The contents of these proceedings also reflect the fact that hard metal technology is now well matured and several aspects of the behavior of these materials are well understood and firmly established Structure property relationships in this class of materials are currently well known Pitfalls in some of the traditional test methods have been recognized and new test methods are being developed which discriminate between intrinsic material properties and flaw content and distribution Application of fracture mechanics although a late comer to the hard materials area as compared to other structural materials is rapidly gaining acceptance and new fracture toughness test methods are being developed Application of modern analysis and analytical techniques to these materials has begun and entirely new and unexpected information has been obtained For a variety of reasons hard metals have dominated the research and development scene of hard materials
