Science Of Olfaction:

Science of Olfaction Michael J. Serby, Karen L. Chobor, 2012-12-06 A book such as this one necessarily entails the effort of many individuals Its first seed was a workshop in 1988 that one of us K L C designed and directed at the City University of New York Graduate Center as part of a series of conferences and workshops on topics in neuropsychology sponsored by the Institute for Research in Behavioral Neuroscience IRBN At that time studies in the efficacy of olfaction as an alternative modality of stimulation in brain injured adults were taking place at IRBN The work shop helped to spark many new ideas among IRBN s staff leading to various projects in clinical intervention some of which are discussed in this volume We soon discovered that clinical interest in olfaction was steadily increasing and that this modality was in many ways on a par with the rest Along with progress in the clinical investigation of olfaction an abundance of work has been published in the basic science of the field Ideas such as the regeneration of olfactory neurons and the use of these neurons in transplantation took hold and were proved to be viable ones These developments along with a profusion of techniques that allow a closer look at the anatomy and physiology of olfaction have contributed to the accelerated pace with which this field is now advancing Dr

Canine Olfaction Science and Law Tadeusz Jezierski, John Ensminger, L. E. Papet, 2016-04-20 The value of the canine nose is well documented and working dogs are being utilized for their olfactory skills in an increasing number of fields Not only are dogs used by police security and the military but they are also now used in forensic science in medical detection of disease in calculating population trends of endangered species and e

The Science of Smell Robert Hamilton Wright, 1964 **Handbook of Olfaction and Gustation** Richard L. Doty, 2015-05-22 The largest collection of basic clinical and applied knowledge on the chemical senses ever compiled in one volume the third edition of Handbook of Olfaction and Gustation encompass recent developments in all fields of chemosensory science particularly the most recent advances in neurobiology neuroscience molecular biology and modern functional imaging techniques Divided into five main sections the text covers the senses of smell and taste as well as sensory integration industrial applications and other chemosensory systems This is essential reading for clinicians and academic researchers interested in basic and applied chemosensory perception

On the Scent Paolo Pelosi, 2016 Smell is arguably the most evocative of senses linked to memories and associations For most animals it is vital for survival For us it enriches our experience of the world our pleasure in food and drink and affects all human interaction Paolo Pelosi describes how scientists are finally unravelling the science of smell

The Neurobiology of Olfaction Anna Menini, 2009-11-24 Comprehensive Overview of Advances in Olfaction The common belief is that human smell perception is much reduced compared with other mammals so that whatever abilities are uncovered and investigated in animal research would have little significance for humans However new evidence from a variety of sources indicates this traditional view is likely

Olfaction in Animal Behaviour and Welfare Birte L Nielsen, 2017-06-29 Evidence based yet entirely practical this important new text builds upon the basics of neuroscience to

describe the links between olfaction and animal behaviour and the effects of odours in animal welfare. Animals use smells in a multitude of ways to orientate themselves to create social bonds to recognise food to initiate reproduction and to avoid predators and imminent threats such as fire. Starting from the scientific basis of olfaction and odour perception the book covers pheromones and behavioural tests before describing the role of olfaction in feeding behaviour reproduction disease detection and animal housing. This is a captivating introduction to the world of smells suitable for advanced students researchers and teachers of applied ethology animal welfare and veterinary science.

Cell Biology of Olfaction Albert I. Farbman, 1992-10-30. The sense of smell is probably the most important sense to a large number of the animal species on Earth and the aim of the study of olfactory cell biology is to understand the cellular basis on which olfactory driven behaviour is based. In this book the author presents a critical analysis of what is known about the olfactory sensory cells in both the nasal cavity and the vomeronasal organ. Although the emphasis is on mammalian olfaction basic issues that have been addressed by research on other vertebrates and invertebrates are also discussed. Throughout the book the premise is that we can only more thoroughly comprehend normal behaviour and dysfunction once we have a detailed understanding of the cells and tissues involved in the sense of smell.

The Scientific Basis of Eating Roger W. A. Linden, 1998. Eating is defined as the act of taking food into the mouth chewing and then swallowing it for nourishment. The purpose of this volume is to present a number of up to date scientific reviews on the mechanisms involved in the process of eating and to introduce the reader to some of the problems encountered when these complex processes malfunction. Topics include a discussion on the peripheral mechanisms of taste and smell taste and olfactory processing in the brain and its relation to the control of eating and a section on mastication with an account of the scientific basis of masticatory disorders. The control mechanisms involved in salivation and swallowing are also extensively reviewed. Because this book reviews the fundamental understanding of the physiological mechanisms involved in eating and includes an insight into the scientific basis of the malfunction of these mechanisms it will be of equal value to both clinical and basic scientists. In particular basic and clinical oral biologists and neurophysiologists dental and medical researchers and postgraduate students will find it a valuable source of information.

Neuromorphic Olfaction Krishna C. Persaud, Santiago Marco, Agustin Gutierrez-Galvez, 2016-04-19. Many advances have been made in the last decade in the understanding of the computational principles underlying olfactory system functioning. Neuromorphic Olfaction is a collaboration among European researchers who through NEUROCHEM Fp7 Grant Agreement Number 216916 a challenging and innovative European funded project introduce novel computing paradigms and biomimetic artifacts for chemical sensing. The implications of these findings are relevant to a wide audience including researchers in artificial olfaction neuroscientists physiologists and scientists working with chemical sensors. Developing neuromorphic olfaction from conceptual points of view to practical applications this cross disciplinary book examines the biological components of vertebrate and invertebrate chemical sensing systems. The early coding pathways in the biological olfactory

system showing how nonspecific receptor populations may have significant advantages in encoding odor intensity as well as odor identity The redundancy and the massive convergence of the olfactory receptor neurons to the olfactory bulb A neuromorphic approach to artificial olfaction in robots Reactive and cognitive search strategies for olfactory robots The implementation of a computational model of the mammalian olfactory system The book's primary focus is on translating aspects of olfaction into computationally practical algorithms These algorithms can help us understand the underlying behavior of the chemical senses in biological systems They can also be translated into practical applications such as robotic navigation and systems for uniquely detecting chemical species in a complex background *Sensory Processing in Vision and Olfaction - Common Features of Key Players* Thor Eysteinnsson, Debra Ann Fadool, Wallace B. International Symposium on Olfaction and Taste Thomas E. Finger, 2009-08-24 This volume presents the latest research in the broad field of the chemical senses from the International Symposium on Olfaction and Taste This field includes not only the obvious senses of taste and smell but also chemical irritation and related sensations Scientists investigate the mechanisms and functions of the chemical senses in the oral and nasal cavity as well as in the viscera including the gut and airways This volume takes an integrative approach and provides historical context for modern research in the field NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com/nyas ACADEMY MEMBERS Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online and discounts on print volumes Please visit <http://www.nyas.org/MemberCenter/Join.aspx> for more information about becoming a member

Mammalian Olfaction, Reproductive Processes, and Behavior Richard Doty, 2012-12-02 Mammalian Olfaction Reproductive Processes and Behavior presents the conceptual methodological and empirical advances in the study of the complex interactions between nasal chemoreception sexual behavior and endocrine function in mammals It focuses on the orders Artiodactyla Perissodactyla Carnivora Rodentia and Primates The book describes techniques for producing anosmia in laboratory animals and the usefulness of the popular pheromone concept in describing chemosensory influences on mammalian behavior and endocrinology It also reviews studies examining reproductive endocrine olfactory interactions in humans Moreover the book discusses the anatomy physiology and development of the olfactory and vomeronasal systems This book is invaluable to anatomists endocrinologists mammalogists physiologists psychologists and zoologists not only as a source book but as a textbook on chemosensation as well **Science**, 1919 Vols for 1911-13 contain the Proceedings of the Helminthological Society of Washington ISSN 0018-0120 1st-15th meeting **Handbook of Meat, Poultry and Seafood Quality** Leo M. Philippopoulos-Mihalopoulos, Danilo Mandic, Caterina Nirta, Andrea Pavoni, 2023-12-04 Although somewhat marginal in relation to the other senses smell is the most potent way of anchoring ourselves to the world We subconsciously find our place in it by sniffing our body the body of the one next to us the room in which we are the culture with which we are familiar There is an incessant olfactory flow consisting of bodies human and nonhuman that are agents of generation consumption diffusion reproduction and dissolution of odours As they move or pause as they cluster with others or try to move away these bodies constantly partake in this olfactory flow this dense planetary swirl that leaves nothing outside The law aims at presenting itself as rational and objective Smell on the other hand is one of the least integrated senses in the legal edifice in comparison to say seeing and hearing This can be attributed mainly to the fact that sense making of smell and law are different even antithetical Smell operates undercurrent tickling the olfactory antennas of individual and collective bodies while habitually hiding behind other sensory volumes Law on the other hand has an interest in appearing present universal constant Olfactory sense making relies on its elusiveness legal sense making invests in its obviousness Yet the two can interact in most unexpected ways as this volume amply shows If anything smell airs the way in which law conceptualises and contextualises its own actuality Smell brings law forth by allowing it to show its underbelly its elusive sense making that is invariably sacrificed in preference to the necessity of legal impressions of constancy However smell s fragmentary discontinuous and unstable nature despite all the ordering that goes to it poses a peculiar challenge to the law This volume sets out to investigate this juncture **Working Dogs: Form and Function, Volume II** Cynthia M.
