The Science of Painting (Classic Reprint) J. G. Vibert,2017-12-18 Excerpt from The Science of Painting Oil painting began in the fifteenth century We are not here going to enter into that great discussion which is not yet finished as to whether Oil painting was really discovered by Van Eyck but perhaps we may venture to say that its discovery was really caused by a mistake In the first place neither John Van Eyck nor his brother ever acquainted anybody with their processes and their secrets died with them and if report is to be credited they were even so jealous that they stabbed one prying individual who ventured into their studio In vain distinguished artists attracted by the fame Of the two brothers came from Italy to Bruges they could learn nothing except that the belief spread that Van Eyck owed the exceeding brilliancy Of his colours to the use Of Oil About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Science and Art Antonio Sgamellotti,Brunetto Giovanni Brunetti,Costanza Miliani,2020-02-24 Science and art are increasingly interconnected in the activities of the study and conservation of works of art Science plays a key role in cultural heritage from developing new analytical techniques for

studying the art to investigating new ways of preserving the materials for the future For example high resolution multispectral examination of paintings allows art historians to view underdrawings barely visible before while the use of non invasive and micro sampling analytical techniques allow scientists to identify pigments and binders that help art conservators in their work It also allows curators to understand more about how the artwork was originally painted Through a series of case studies written by scientists together with art historians archaeologists and conservators Science and Art The Painted Surface demonstrates how the cooperation between science and humanities can lead to an increased understanding of the history of art and to better techniques in conservation The examples used in the book cover paintings from ancient history Renaissance modern and contemporary art belonging to the artistic expressions of world regions from the Far East to America and Europe Topics covered include the study of polychrome surfaces from pre Columbian and medieval manuscripts the revelation of hidden images below the surface of Van Gogh paintings and conservation of acrylic paints in contemporary art Presented in an easily readable form for a large audience the book guides readers into new areas uncovered by the link between science and art The book features contributions from leading institutions across the globe including the Metropolitan Museum of Art New York Art Institute of Chicago Getty Conservation Institute Opificio delle Pietre Dure Firenze National Gallery of London Tate Britain Warsaw Academy of Fine Art and the National Gallery of Denmark as well as a chapter covering the Thangka paintings by Nobel Prize winner Richard Ernst

Gordon Mowat, John Alexander Cooper, Newton MacTavish, 1893 **The Alchemy of Paint** Spike Bucklow, 2009 *The Alchemy of Paint* is a critique of the modern world which Spike Bucklow sees as the product of seventeenth century ideas about science In modern times we have divorced color from its origins using it for commercial advantage Spike Bucklow shows us how in medieval times color had mystical significance far beyond the enjoyment of shade and hue Each chapter demonstrates the mindset of medieval Europe and is devoted to just one color acknowledging its connections with life in the pre modern world Colors examined and explained in detail include a midnight blue called ultramarine an opaque red called vermilion a multitude of colors made from metals a transparent red called dragonsblood and finally gold Today scarlet describes a color but it was originally a type of cloth Henry VI s wardrobe accounts from 1438 to 1489 show that his cheapest scarlet was 14 2s 6d and that scarlets could fetch up to twice that price In the fifteenth century a mid priced scarlet cost more than two thousand kilos of cheese or one thousand liters of wine This expense accounts for the custom of giving important visitors the red carpet treatment The book looks at how color was read in the Middle Ages and returns to materials to look at the hidden meaning of the artists version of the philosopher s stone The penultimate chapter considers why everyone has always loved gold Spike Bucklow is a conservation scientist working with oil paintings at the Hamilton Kerr Institute in Cambridge
