Ramified Natural Theology in Science and Religion Rodney Holder, 2020-10-15 This book offers a rationale for a new

ramified natural theology that is in dialogue with both science and historical critical study of the Bible Traditionally knowledge of God has been seen to come from two sources nature and revelation However a rigid separation between these sources cannot be maintained since what purports to be revelation cannot be accepted without qualification rational argument is needed to infer both the existence of God from nature and the particular truth claims of the Christian faith from the Bible Hence the distinction between bare natural theology and ramified natural theology The book begins with bare natural theology as background to its main focus on ramified natural theology Bayesian confirmation theory is utilised to evaluate competing hypotheses in both cases in a similar manner to that by which competing hypotheses in science can be evaluated on the basis of empirical data In this way a case is built up for the rationality of a Christian theist worldview Addressing issues of science theology and revelation in a new framework this book will be of keen interest to scholars working in Religion and Science Natural Theology Philosophy of Religion Biblical Studies Systematic Theology and Science and Culture

Self-Fulfilling Science Charles Lowe,2021-08-23 Claims that science may becoming self fulfilling through its impact on objects of study have recently risen to prominence Despite radical statements about the supposed consequences of such accounts however the central notion of scientific self fulfillment has remained obscure leading to skewed views of its actual prevalence and significance Self Fulfilling Science illuminates this underexplored phenomenon drawing on insights from philosophy of science to address questions of its conceptualization prevalence and significance The book critically engages with the popular notion that economic theories of homo economicus exhibit self fulfillment and explores its relevance to various metaphysical ethical and epistemic issues Extreme claims of fundamental incompatibility with our usual notions of scientific success are ill founded Instead self fulfillment s true epistemic significance lies in more local nuanced philosophical issues such as theory evaluation and the thesis of underdetermination In presenting a novel framework this book facilitates deeper engagement with the developing field of self fulfilling science and is of interest to philosophers of science social scientists and social constructionists
