Steel,2014-04-21 Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena This politicization of science is deepened by the key role government funding plays in scientific research and development the market leading position of U S based science and technology firms and controversial U S exports such as genetically modified foods or hormone injected livestock This groundbreaking one volume A to Z reference features 120 150 entries that explore the nexus of politics and science both in the United States and in U S interactions with other nations The essays each by experts in their fields examine Health environmental and social cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect *Science and Politics An A to Z Guide to Issues and Controversies* is a must have resource for researchers and students who seek to deepen their understanding of the connection between science and politics *Handbook on Science and Public Policy* Dagmar Simon,Stefan Kuhlmann,Julia Stamm,Weert Canzler,2019 This Handbook assembles state of the art insights into the co evolutionary and precarious relations between science and public policy Beyond this it also offers a fresh outlook on emerging challenges for science including technology and innovation in changing societies and related policy requirements as well as the challenges for

public policy in view of science driven economic societal and cultural changes In short this book deals with science as a policy triggered project as well as public policy as a science driven venture **Biomedical Scientists and Public Policy** H. H. Fudenberg, 2012-12-06 This volume brings together the views of authors involved in many aspects of biomedicine from research on basic biology to clinical investigation of the causes and treatment of human disease to hospital administration to health care planning on the state and Federal levels to Congressional legislation covering biomedical research medical education the development of medical technology and the delivery of health care The purpose is not to present a party line representing a consensus of these often divergent viewpoints and we do not suggest that we have found solutions to the many problems encountered in the interaction of scientists administrators legislators and the recipients of health care These articles are intended primarily to communicate to both biomedical scientists and intelligent laymen the processes social and political as well as scientific whereby biomedical science advances and the need for biomedical scientists to take an interest and initiative not only in scientific research but also in research on health care delivery and in related public issues before the legislative and administrative branches of government **Science, Scientists, and Public Policy** Dean Schooler, 1971

Risk and Society: The Interaction of Science, Technology and Public Policy M Waterstone, 2012-12-06 Life in the last quarter of the twentieth century presents a baffling array of complex issues The benefits of technology are arrayed against the risks and hazards of those same technological marvels frequently though not always arising as side effects or by products This confrontation poses very difficult choices for individuals as well as for those charged with making public policy Some of the most challenging of these issues result because of the ability of technological innovation and deployment to outpace the capacity of institutions to assess and evaluate implications In many areas the rate of technological advance has now far outstripped the capabilities of institutional monitoring and control While there are many instances in which technological advance occurs without adverse consequences and in fact yields tremendous benefits frequently the advent of a major innovation brings a wide array of unforeseen and to some undesirable effects This problem is exacerbated as the interval between the initial development of a technology and its deployment is shortened since the opportunity for cautious appraisal is decreased **When Ideology Trumps Science** Erika Allen Wolters, Brent S. Steel, 2017-12-01 This book reveals how embedded beliefs more so than a lack of scientific knowledge and understanding are creating a cognitive bias toward information that coincides with personal beliefs rather than scientific consensus and that this anti science bias exists among liberals as well as conservatives In 2010 an outbreak of whooping cough in California infected more than 8 000 people resulting in the hospitalization of more than 800 people and the death of 10 infants In 2015 an outbreak of the measles in Disneyland infected more than 125 people Both the whooping cough and the measles are vaccine preventable diseases VPDs that have been largely nonexistent in the United States for decades As these cases demonstrate individuals who prioritize ideology or personal beliefs above scientific consensus can impinge on society at large and they illustrate how rejecting

science has unfortunate results for public health and for the environment When Ideology Trumps Science examines how proponents of scientific findings and the scientists responsible for conducting and communicating the applicable research to decision makers are encountering direct challenges to scientific consensus Using examples from high stakes policy debates centered on hot button controversies such as climate change GMO foods immunization stem cell research abstinence only education and birth control authors Wolters and Steel document how the contested nature of contemporary perspectives on science leads to the possibility that policymakers will not take science into account when making decisions that affect the general population In addition the book identifies ways in which liberals and conservatives have both contested issues of science when consensus diverges from their ideological positions and values It is a compelling must read for public policy students and practitioners

Mandated Science: Science and Scientists in the Making of Standards L. Salter,W. Leiss,Edwin Levy,2012-12-06 For a long time I would not eat strawberries In 1977 a scandal broke about a testing laboratory having falsified the data that was used to register a large number of pesticides The Canadian government along with several others began the process of re evaluating both the procedures for testing and these specific chemicals One chemical proved particularly controversial the commonly used pesticide named captan In light of the controversy which was manifest in a conflict between two government departments in 1981 the Canadian government chose to appoint a special panel of experts to advise them I was a member of this expert committee The experience on the captan committee did little to reassure me either about captan or about the way that decisions had been made about many pesticides in widespread use Although it could not be demonstrated that captan was dangerous to people in the amounts to which they would likely be exposed the animal studies provided the basis for concern Prudence required at the very least that consumers take the precaution of washing their fruit for captan is widely used on apples cherries and berry fruits Captan residues wash off apples relatively easily they are less easily removed from berry fruits such as straw berries **Science for Public Policy** H.
