20 years the region has established a more stable and certain macroeconomic regime it is also clear that these changes have not been enough to trigger a process of innovation and productivity to catch up Against this rather grim scenario there is some optimism emerging throughout the region After many years of inaction the region has begun to invest in science technology and engineering once again Furthermore after many changes in innovation policy frameworks there is now an emerging consensus on the need for a solution to coordination failures that hinder the interaction between supply and demand Offering an informative and analytic insight into STI policymaking within Latin America this book can be used by students researchers and practitioners who are interested in the design and implementation of innovation policies This book also intends to encourage discussion and collaboration amongst current policy makers within the region
